

Joshua Says

Armored Integration: Whisper, Warm, Hot

For people who already know the easy version.

Real-time whisper coaching, warm transfer to coaches, hot transfer to leadership, and a truly intelligent IVR at the top of the funnel — across Genesys Cloud CX and ServiceNow ITSM/CSM, on their public APIs

by Joshua

V1. Written from the platform's public documentation as of the date below. Check every key against the source area named in *Check the work* before relying on it; corrections are dated and kept public.

19 items · V1 · 2026-09-15

ServiceNow and Genesys is a trademark of its owner. This book is an independent, unofficial study aid. It is not affiliated with, sponsored by, or endorsed by ServiceNow and Genesys or any employer of the author. Every item is original and written from the platform's public documentation; no certification exam question is reproduced or paraphrased, and no customer instance, configuration or data is described.

How to run it

- 1 Read the target word first.** Write it on the line before you read the options. The platform disguises the question in the noun it uses — case or incident, skill or agent, queue or division, total or per unit.
- 2 Name the one fact that decides.** Everything else in the stem is camouflage: the deadline, the executive, the numbers, the object's name.
- 3 Principle before configuration.** Say what the platform construct is *for*, then pick the construct.
- 4 Confusion sets are the platform's favourite trap.** Every wrong option is a real thing. The test is exact role-matching, not recognition.
- 5 Mark confidence honestly.** Sure-and-wrong is a wrong mental model, and it is the only thing worth finding.
- 6 Grade in Part B.** Each distractor carries the error it encodes. Name the mold you fell for; naming it defeats it.

Check the work — sources

Every item is written from public documentation. Before trusting a key, check it against the source area named here; corrections are dated and kept public.

Genesys Cloud Developer Center — Platform API	developer.genesys.cloud › Conversations API (monitor / coach / barge, consult and blind transfer), Notifications API (WebSocket topics), Speech and Text Analytics API, Routing and Users APIs
Genesys Cloud Resource Center — Architect and integrations	help.mypurecloud.com › Architect data actions, web services data actions integration, Agent Assist / Agent Copilot, supervisor coaching
ServiceNow Developer Documentation — REST APIs	developer.servicenow.com › Table API, Scripted REST APIs, Import Set API, Advanced Work Assignment, Now Assist / Generative AI APIs, Computer Telephony Integration (OpenFrame)
Google Cloud — Contact Center AI Platform documentation	cloud.google.com/contact-center (reference frame only)

The seven molds: dropped element · wrong stem number · adjacent category · inverted operation · absolute language · confusion set · camouflage (the option that answers a stem fact that was never the question).

The design in one page

Three moments, one loop. The floor hears the call; the machine sequences who should hear it next; the human decides. Nothing in this design lets a machine evaluate a person — it only routes attention.

Moment	What happens	Who acts	Where it runs
Whisper	A coach hears the live call and speaks to the agent only; the customer hears nothing	Coach, invited by a signal	Genesys Cloud — supervisor coaching on the conversation
Warm	The agent consults a coach on the line, introduces the customer, then drops or stays	Agent, with the coach	Genesys Cloud — consult transfer
Hot	The call goes straight to leadership with context attached; no consult	Agent or the rule	Genesys Cloud — blind transfer, with the ServiceNow record on the pop
Deflect	The caller is served or routed before a queue is ever touched — by data, not by a chatbot	The IVR, on ServiceNow data	Architect inbound flow + data actions to ServiceNow

The signal that invites a whisper is the interesting part. Sentiment and topic detection from Speech and Text Analytics, plus case state from ServiceNow, produce a score. The score sequences which calls a coach hears. It never grades the agent — that contract is written first, so nobody fights it.

Whisper coaching — the API surface

1. Subscribe. Open a Notifications channel and subscribe to the queue's conversation topics so the coaching service sees calls as they connect and change state (Notifications API: create channel → WebSocket → subscribe to conversation topics for the queue or users).
2. Score. For each live call, poll or stream Speech and Text Analytics for sentiment trend and detected topics; join with the ServiceNow case or incident (Table API on the record the screen-pop opened) for state, priority, entitlement and escalation flags. Publish a whisper score.
3. Invite. When the score crosses the threshold, notify the on-shift coach (Genesys presence and routing status decide who is free) with one action: Listen. The coach joins in monitor mode, then coach mode (Conversations API participant actions: monitor → coach; barge stays reserved for leadership).
4. Record. Write the whisper event — who, when, why, outcome — back to the ServiceNow record as a work note and to the data lake as a label. Every whisper is a training example for the next threshold.

Guardrails: coaching audio is agent-only by platform design; the customer never hears it. Scores are non-determinative — never admissible in performance review. Access to monitor/coach is a Genesys permission scoped by division.

Warm transfer to a coach · hot transfer to leadership

Transfer	Genesys mechanism	ServiceNow side	When the rule fires it
Warm	Consult transfer — agent initiates consult to the coach's user or a coaching queue; introduces; completes or cancels	Case/incident stays open; consult logged as a work note; ownership unchanged until the coach accepts	Never automatically. Warm is a human choice; the whisper can suggest it
Hot	Blind transfer to a leadership queue with priority routing; the interaction carries the ServiceNow record number as an attribute	Screen-pop of the record via the integration; escalation record created on transfer; leadership sees the whisper score history	On explicit triggers only: threat, legal, regulatory, or the agent's hot key

The attribute is the whole trick: set the ServiceNow record number and the whisper score as conversation attributes before transfer (Conversations API attributes), so the receiving pop opens the right record with the right context. Without

that, a hot transfer is a cold one with a longer hold.

Deflection at the top of the funnel — the intelligent IVR

Not a bot. An IVR is intelligent when it already knows the answer before it asks a question. The intelligence is in the data actions, not in a persona.

Caller state (from ServiceNow, by ANI or account lookup)	What the IVR does	API
Has an open case in Awaiting Customer	Reads the pending question aloud; captures the answer to the case; no queue	Table API read → Architect data action; write back via Table API or Scripted REST
Affected by an open major issue / major incident	Proactive announcement with ETA and the option for a callback when resolved; no queue	Table API on major case / major incident; Genesys callback creation
Entitlement expired or wrong channel	Routes to the entitled channel or self-service; explains why	Entitlement lookup; Architect decision
No record, high-value account	Skips the menu; routes with preferred agent and priority	Account lookup; routing attributes set in flow
Nothing known	Short menu, then queue — the only path that touches a human without a reason	Default

Measure deflection as cases answered without a queue touch, and re-contacts within seven days. If re-contacts rise, the IVR deflected the wrong thing.

Sequence — one call, end to end

Ring → ANI/account lookup (data action → ServiceNow) → IVR decision → queue with attributes → agent pop (record opens) → live scoring (STA + case state) → whisper invite (coach monitors, coaches) → optional consult (warm) → optional hot transfer (leadership queue, attributes carry) → wrap-up and write-back (work note, labels to the lake) → the next threshold learns from the outcome.

Everything above is public API. Nothing requires a custom bot, a new processor, or a vendor engagement. The only incremental cost is compute and the coaches' time — which is the point: it spends their time where the score says it matters.

Doing it today, in-house, with the Now Assist Skill Kit — no new platform configuration

Read the constraint literally: nothing changes on the telephony platform, no new integration is built, no vendor is engaged, no new processor or egress is created. The transcripts and sentiment already land on the ServiceNow record through the integration that exists; the case and incident tables already hold the state. Everything below is a skill built in the Now Assist Skill Kit on data that is already there, run by the Generative AI Controller on the in-house model. A skill is configuration inside the boundary; it is not configuration of a platform.

Skill	Grounding (what it may see)	Tool (deterministic fetch)	Output (structured)	Where it appears
Whisper Score	The open case/incident, its work notes, and the attached transcript and sentiment fields from the existing integration	Retriever over related records; a script tool returning entitlement, priority and escalation flags	score 0–100 · one-sentence reason · suggested coach (from the on-shift group)	Agent Workspace side panel for the coach queue; a Flow Designer trigger on record update writes the score to a field

Coach Brief	The last N minutes of transcript and the case summary	None beyond grounding	120-word brief: who, what, where it is going, what to listen for	Fires when the score crosses the threshold; delivered by the existing notification to the coach with a link to the record
Warm Handoff Note	Case, transcript, the agent's typed intent	None	A three-line introduction the agent reads on consult, plus the work note	UI action on the case — Prepare consult
Hot Transfer Context	Case, escalation reason, whisper history	Script tool creating/reading the escalation record	Leadership brief; escalation record fields populated; attributes for the pop	UI action — Escalate to leadership — and the escalation record
IVR Answer	The caller's open case in Awaiting Customer, or the major case/incident affecting them	Table read on account/contact match	The pending question as spoken text; the proactive announcement text; the deflection reason code	Returned to the existing Architect data action that already calls ServiceNow — the IVR reads it; no Architect change

Order of work, one week, one person with the Skill Kit role in a scoped application: (1) Whisper Score — build, test on twenty closed cases with known outcomes, tune the threshold on the evaluation set, publish, deploy to the coach panel. (2) Coach Brief — build, test, wire to the threshold flow. (3) Warm Handoff Note and Hot Transfer Context — build as UI actions; test the escalation write. (4) IVR Answer — build; return its output through the data action the IVR already calls. (5) Turn on write-back: every skill output and every human accept/edit/reject lands as a label. Promote by update set.

What is deliberately not done: no barge, no automatic hot transfer, no scoring visible to anyone but the coach queue, no third-party model provider, no new data leaving. The eight-months-to-eight-days promise is this list — the platform team's hands stay on the platform; the skill builder's hands stay inside the scope.

Guardrail	How the Skill Kit enforces it
Sensitive content in transcripts	Mask/exclude fields before grounding; the skill never sees what the record does not expose to its role
Non-determinative scores	The score is a field with no workflow authority; nothing transitions on it; performance-review reports exclude it by ACL
Scope	Skills live in a scoped app with delegated development; cross-scope read on case/incident is declared; no write to platform tables outside the app
Provider	Now LLM through the Generative AI Controller; the third-party path is not configured
Verification	Skill Kit evaluation set: twenty known cases per skill before publish; human accept/edit/reject tracked after

Part A — Items

1. Skill Kit, not a new integration

An architect proposes a new middleware service to compute the whisper score from Genesys and ServiceNow. The transcripts and sentiment already land on the record. What is the in-house path with no new platform configuration?

- A. A third-party AI provider
- B. The middleware, since it is 'real-time'
- C. A Whisper Score skill in the Now Assist Skill Kit, grounded on the record and its attached transcript/sentiment, with a script tool for flags, deployed to the coach panel
- D. A manual spreadsheet

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

2. What a skill may not do

Someone wants the Whisper Score skill to also set the case to Escalated when the score is high. Why is that the wrong design?

- A. It would be too slow
- B. Skills cannot write fields
- C. Escalation is a Genesys function
- D. Scores sequence attention; a skill output must carry no workflow authority — transitions stay with humans or explicit rules

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

3. IVR Answer without touching Architect

The IVR already calls a ServiceNow data action for account lookup. How does the IVR Answer skill reach the caller with no Architect change?

- A. Its structured output is returned through the same data action response the IVR already reads
- B. A new bot flow
- C. A new data action
- D. An email to the caller

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

4. Evaluation before publish

A skill 'looks good' on three cases. What does the Skill Kit expect before it is published to coaches?

- A. Publish and watch
- B. An evaluation set of known cases with expected outputs — here twenty — and a threshold tuned on it; then publish, then deploy
- C. A vendor review
- D. Three is enough

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

5. Whisper vs monitor vs barge

A coach wants to hear a live call and speak to the agent without the customer hearing. Later, a director wants to join the call and speak to everyone. Which Genesys Cloud participant actions?

- A. Consult transfer for the first
- B. Monitor for both
- C. Coach for the first; barge for the second. Monitor is silent listening only
- D. Barge for both

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

6. Warm vs hot transfer

An agent introduces the customer to a coach and stays on to hand over context. Another agent sends a threatening caller straight to a leadership queue. Which transfer types, in API terms?

- A. Blind for both
- B. Consult for both
- C. Conference for the first, consult for the second
- D. Consult transfer (warm) · blind transfer (hot)

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

7. Carrying context on transfer

Leadership answers a hot transfer and sees nothing about the case. What was missing?

- A. Conversation attributes (record number, whisper score) set before transfer, read by the screen-pop integration on the receiving side
- B. A longer hold message
- C. A knowledge article
- D. Barge instead of transfer

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

8. Real-time signal

The whisper service needs to know the moment a call connects and every state change after, without polling every second. Which API pattern?

- A. Analytics API daily export
- B. Notifications API — a channel and WebSocket subscription to conversation topics
- C. Polling the Conversations API each second
- D. A data table

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

9. Sentiment as a sequencer

A manager proposes using the whisper score in quarterly reviews 'since we have it.' What is the correct position, and why does it matter to adoption?

- A. Use it; more data is better
- B. Use it only for top performers
- C. Scores sequence which calls a coach hears; they are non-determinative and never admissible in evaluation — set at launch so the floor trusts the whisper
- D. Delete the scores after each shift

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

10. Where the case state lives

The IVR needs to know whether the caller has a case in Awaiting Customer. Which ServiceNow surface, and from where?

- A. Genesys external contacts
- B. A knowledge article
- C. The agent asks
- D. Table API read on the case table filtered by the contact/account, called from an Architect data action

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

11. Intelligent IVR vs bot

A vendor pitches a conversational bot to 'deflect 30%.' The design here deflects with lookups. What is the distinction that matters?

- A. A bot converses to discover intent; an intelligent IVR already knows the state from data and acts — fewer turns, no persona, measurable by re-contacts
- B. They are the same
- C. Bots are always better
- D. IVRs cannot use data

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

12. Proactive deflection

A major incident affects thousands of customers. The IVR should tell affected callers before they queue and offer a callback when it is fixed. Which ServiceNow object and Genesys capability?

- A. Barge
- B. Major incident / major case lookup by affected CI or account → Architect announcement → callback creation
- C. An SLA
- D. A survey

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

13. Who is free to coach

The whisper invite should go only to a coach who is not on a call and is on shift. Which Genesys data?

- A. Division
- B. Wrap-up codes
- C. Presence and routing status of users in the coaching group, plus utilization
- D. Evaluation forms

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

14. Write-back

After a whisper, nothing is recorded anywhere. Six months later nobody can say whether whispers helped. What should have been built?

- A. A monthly survey of coaches
- B. Nothing; coaching is informal
- C. A spreadsheet
- D. Write-back of every whisper event to the ServiceNow record (work note) and to the lake as a label, so outcomes train the threshold

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

15. Permissions and scope

A coach in one division can monitor calls in another division's queues. What is misconfigured?

- A. The coach's role is granted across divisions; scope the monitor/coach permission to the coach's division
- B. Wrap-up codes
- C. The Notifications channel
- D. Utilization

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

16. Hot-transfer triggers

Which of the following should fire a hot transfer to leadership automatically, without a human deciding?

- A. Any VIP
- B. None of them — hot transfer fires on explicit triggers (threat, legal, regulatory) or the agent's hot key, never on a sentiment score alone
- C. Any call with negative sentiment
- D. Any call over ten minutes

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

17. Measuring deflection honestly

Deflection is reported at 40%. Re-contacts within seven days doubled. What happened?

- A. Success — 40% is the target
- B. Customers prefer calling back
- C. The IVR deflected calls that needed a human; measure deflection net of re-contacts
- D. The SLA changed

Target word: _____ The one fact that decides: _____
Answer: _____ [] sure [] unsure [] guess

18. Which side owns what

Where does each piece of logic belong: the whisper threshold, the transfer action, the case state, the caller's pending question?

- A. Everything in ServiceNow
- B. Everything in Architect
- C. Everything in the bot
- D. Threshold: the scoring service (lake side) · transfer: Genesys · case state and pending question: ServiceNow · the IVR reads, never owns

Target word: _____ The one fact that decides: _____

Answer: _____ [] sure [] unsure [] guess

19. No new processor

Security asks what new data leaves the environment for this design. What is the honest answer?

- A. Nothing new — Genesys and ServiceNow already exchange this data through existing integrations; the scoring runs on the existing lake; no new vendor, processor or egress
- B. Transcripts go to the coach's phone
- C. Audio goes to a new AI vendor
- D. Unknown

Target word: _____ The one fact that decides: _____

Answer: _____ [] sure [] unsure [] guess

STOP

Answers ahead. Finish Part A and mark every confidence box, then turn.

Part B — Key and dissection

1. Skill Kit, not a new integration — C

Rule. Skill on existing data beats a new pipe.

Target word. ALREADY land on the record **Decides.** If the data is already inside, the skill is the shortest path.

Camouflage, struck. 'real-time'

A	inverted operation	A third-party AI provider
B	inverted operation	The middleware, since it is 'real-time'
C	KEY	A Whisper Score skill in the Now Assist Skill Kit, grounded on the record and its attached transcript/sentiment, with a script tool for flags, deployed to the coach panel
D	dropped element	A manual spreadsheet

2. What a skill may not do — D

Rule. A skill informs; it does not decide.

Target word. ALSO set the case **Decides.** Output ≠ authority.

Camouflage, struck. —

A	dropped element	It would be too slow
B	absolute language	Skills cannot write fields
C	confusion set	Escalation is a Genesys function
D	KEY	Scores sequence attention; a skill output must carry no workflow authority — transitions stay with humans or explicit rules

3. IVR Answer without touching Architect — A

Rule. New content, same door.

Target word. NO Architect change **Decides.** Ride the call that exists.

Camouflage, struck. —

A	KEY	Its structured output is returned through the same data action response the IVR already reads
B	inverted operation	A new bot flow
C	adjacent category	A new data action
D	dropped element	An email to the caller

4. Evaluation before publish — B

Rule. Test set → threshold → publish → deploy → label.

Target word. 'looks good' on THREE **Decides.** Verify the instrument before trusting the reading.

Camouflage, struck. —

A	inverted operation	Publish and watch
B	KEY	An evaluation set of known cases with expected outputs — here twenty — and a threshold tuned on it; then publish, then deploy
C	confusion set	A vendor review
D	absolute language	Three is enough

5. Whisper vs monitor vs barge — C

Rule. Monitor = hear. Coach = talk to agent only. Barge = talk to all.

Target word. agent only vs EVERYONE **Decides.** Who can hear the supervisor's voice.

Camouflage, struck. ~~director~~

A	confusion set	Consult transfer for the first
B	dropped element	Monitor for both
C	KEY	Coach for the first; barge for the second. Monitor is silent listening only
D	inverted operation	Barge for both

6. Warm vs hot transfer — D

Rule. Consult = warm, sender stays. Blind = hot, sender drops.

Target word. introduces vs STRAIGHT **Decides.** Whether the sender stays on the line.

Camouflage, struck. —

A	dropped element	Blind for both
B	dropped element	Consult for both
C	inverted operation	Conference for the first, consult for the second
D	KEY	Consult transfer (warm) · blind transfer (hot)

7. Carrying context on transfer — A

Rule. Set attributes, then transfer; the pop reads them.

Target word. sees NOTHING **Decides.** Context travels as attributes on the conversation.

Camouflage, struck. —

A	KEY	Conversation attributes (record number, whisper score) set before transfer, read by the screen-pop integration on the receiving side
B	dropped element	A longer hold message
C	confusion set	A knowledge article
D	inverted operation	Barge instead of transfer

8. Real-time signal — B

Rule. Notifications for now; Analytics for later.

Target word. the MOMENT · without polling **Decides.** Push over pull for live state.

Camouflage, struck. —

A	inverted operation	Analytics API daily export
B	KEY	Notifications API — a channel and WebSocket subscription to conversation topics
C	adjacent category	Polling the Conversations API each second
D	confusion set	A data table

9. Sentiment as a sequencer — C

Rule. Sequence, never evaluate.

Target word. 'since we have it' **Decides.** The trust contract is the adoption mechanism.

Camouflage, struck. —

A	absolute language	Use it; more data is better
B	adjacent category	Use it only for top performers
C	KEY	Scores sequence which calls a coach hears; they are non-determinative and never admissible in evaluation — set at launch so the floor trusts the whisper
D	inverted operation	Delete the scores after each shift

10. Where the case state lives — D

Rule. Architect asks ServiceNow; ServiceNow answers from the table.

Target word. IVR needs to KNOW **Decides.** Data actions call the record source of truth.

Camouflage, struck. —

A	adjacent category	Genesys external contacts
B	confusion set	A knowledge article
C	dropped element	The agent asks
D	KEY	Table API read on the case table filtered by the contact/account, called from an Architect data action

11. Intelligent IVR vs bot — A

Rule. Deflection by knowledge, not by conversation.

Target word. discover vs already KNOW **Decides.** Data before dialogue.

Camouflage, struck. ~~30%~~

A	KEY	A bot converses to discover intent; an intelligent IVR already knows the state from data and acts — fewer turns, no persona, measurable by re-contacts
B	absolute language	They are the same
C	absolute language	Bots are always better
D	absolute language	IVRs cannot use data

12. Proactive deflection — B

Rule. Announce from the parent; callback on resolution.

Target word. BEFORE they queue · when fixed **Decides.** The parent record knows who is affected; callback holds the promise.

Camouflage, struck. ~~thousands~~

A	inverted operation	Barge
B	KEY	Major incident / major case lookup by affected CI or account → Architect announcement → callback creation
C	confusion set	An SLA
D	confusion set	A survey

13. Who is free to coach — C

Rule. Ask the platform who is free; do not guess from a schedule.

Target word. not on a call · on shift **Decides.** Availability is presence × routing status × capacity.

Camouflage, struck. —

A	adjacent category	Division
B	confusion set	Wrap-up codes
C	KEY	Presence and routing status of users in the coaching group, plus utilization
D	adjacent category	Evaluation forms

14. Write-back — D

Rule. Every human decision is a label for the next machine decision.

Target word. nobody can SAY **Decides.** An executed action must produce telemetry.

Camouflage, struck. ~~six months~~

A	adjacent category	A monthly survey of coaches
B	absolute language	Nothing; coaching is informal
C	dropped element	A spreadsheet
D	KEY	Write-back of every whisper event to the ServiceNow record (work note) and to the lake as a label, so outcomes train the threshold

15. Permissions and scope — A

Rule. Coaching permission follows the division boundary.

Target word. ANOTHER division's queues **Decides.** Permission × division = scope.

Camouflage, struck. —

A	KEY	The coach's role is granted across divisions; scope the monitor/coach permission to the coach's division
B	confusion set	Wrap-up codes
C	adjacent category	The Notifications channel
D	confusion set	Utilization

16. Hot-transfer triggers — B

Rule. Automation routes attention; it does not seize the call.

Target word. WITHOUT a human deciding **Decides.** Scores sequence; humans decide.

Camouflage, struck. —

A	adjacent category	Any VIP
B	KEY	None of them — hot transfer fires on explicit triggers (threat, legal, regulatory) or the agent's hot key, never on a sentiment score alone
C	inverted operation	Any call with negative sentiment
D	adjacent category	Any call over ten minutes

17. Measuring deflection honestly — C

Rule. Deflection = served without a queue AND not back within seven days.

Target word. deflection UP · re-contacts UP **Decides.** A deflected call that returns was not deflected.

Camouflage, struck. 40%

A	inverted operation	Success — 40% is the target
B	absolute language	Customers prefer calling back
C	KEY	The IVR deflected calls that needed a human; measure deflection net of re-contacts
D	confusion set	The SLA changed

18. Which side owns what — D

Rule. Server decides, client renders — three servers, one loop.

Target word. OWNS **Decides.** Each system decides what it is the source of truth for.

Camouflage, struck. —

A	dropped element	Everything in ServiceNow
B	dropped element	Everything in Architect
C	inverted operation	Everything in the bot
D	KEY	Threshold: the scoring service (lake side) · transfer: Genesys · case state and pending question: ServiceNow · the IVR reads, never owns

19. No new processor — A

Rule. No new ingress or egress is the design constraint, not an afterthought.

Target word. what NEW data leaves **Decides.** Compose from what is already cleared.

Camouflage, struck. —

A	KEY	Nothing new — Genesys and ServiceNow already exchange this data through existing integrations; the scoring runs on the existing lake; no new vendor, processor or egress
B	inverted operation	Transcripts go to the coach's phone
C	inverted operation	Audio goes to a new AI vendor
D	absolute language	Unknown

Part C — Triage

Sort every item by the two marks you made. Write item numbers in the cells.

	Right	Wrong
Sure	Owned. Bank it.	Wrong model. Top priority. Say the rule aloud; find the construct in the documentation.
Unsure	Recognition, not mastery. Redo from the rule.	Not learned. Read the rule, then the source area.
Guess	Luck. Treat as not learned.	Not learned.

Mold tally. dropped element ____ · wrong stem number ____ · adjacent category ____ · inverted operation ____ · absolute language ____ · confusion set ____ · camouflage ____ . The largest number is the pattern to drill.

ServiceNow and Genesys is a trademark of its owner. This book is an independent, unofficial study aid.
