

V2.4 FOUNDERS

V2.4 FOUNDERS — three people, three pages, one test list

V2.0 replaces the long trail (V1.1, kept in prior/) with one page per founder and one shared test list. Initials only. Nothing asks for belief; every line has the test that kills it. Reading of “A.A. — seven subtypes” flagged at the end; correct it in one word.

The three, and where they stand

Founder	Lives	What that puts inside the plan
B.A.	Texas	A moon-shot state (#35) with unsupervised robotaxis running today in Austin, Dallas, Houston — the only place a founder can <i>ride the product</i> before we own one
K.A.	Texas	Same ground, second pair of eyes; the two of you can run the Texas tests without each other
A.A.	Utah, and a family footprint written out below in the algebra	The first county (UT), the Wendover line (NV), St. George, a moon-shot state (CA), Idaho, and two Mexican states — Nayarit and Jalisco

The A.A. footprint, algebraically (his notation, made consumable)

Let **A.A** be the family seat (seven members, by his word). Members are indexed **A.A₁ ... A.A₇**; a member outside that index is **A.A'** (prime). **H(x)** is the set of places where x has a home. **F** is the footprint the founders bring.

Member	H(member)	Notes
A.A'	{ St. George UT, NV }	prime — outside the seven
A.A ₁	{ UT, CA }	names hires #2 Alba, #3 Lashae, self #4
A.A ₂ = Andrea	{ UT, NV, Nayarit } $\cup$ ties { Gustavo, Guadalajara (Jalisco), Nayarit }	“her and Aaron can fight that out” with A.A ₃ — which of ₂ and ₃ holds what is theirs to settle
A.A ₃	(not stated — the other side of that fight)	—
A.A ₇	{ ID }	—

F = H(B.A.) $\cup$ H(K.A.) $\cup$ H(A.A') $\cup \bigcup_i$ H(A.A_i) = { TX, UT, St. George, CA, NV, ID, Nayarit, Jalisco }. Of the sixteen pinned states, **five** (TX, UT, CA, NV, ID) now hold a founder’s or a family bed; **two Mexican states** are on the map only because homes are there. Every element of F is a door with somewhere to sleep beside it.

Resolved by him, 09-21: A.A₂ = Andrea stands. So the lender on V1.1 ANDREA is inside the founder family. What that means, written for the three of you: it’s a **related-party loan** — ordinary if it’s on paper, dangerous if it isn’t. The note carries one sentence saying the lender is related to a founder, the interest is a rate a bank would charge, and all three of you sign that you’ve seen it. She stays a lender, not an owner. Nothing else about the money changes.

0! — one reading still flagged: 1. “Naurita” read as Nayarit; Guadalajara placed in Jalisco.

Roles: the three of you own JOSHUA Holdings and decide everything. Erik: chairman and/or advisor, or neither — written by you at formation, with no operating authority. Andrea: lender — inside the founder family, so a related-party loan on paper — one car, on a note with a brake. The state: a customer that can say no.

The footprint is now where you live. TX, CA, NV, UT, ID are five of the sixteen pinned states, and three founders already have addresses in them. Mexico isn’t pinned; it’s on this page because a house is there.

B.A. — Texas

Asked to be: founder; the one who tests the product before it exists. **Brings:** an address in the one state where a robotaxi is a thing you can hail tonight. **Your three tests (all \$0):** 1. **Ride one at closing time.** Saturday, 12:45 a.m., Austin or Dallas or Houston: hail a Tesla robotaxi from a bar district. Log wait, fare, whether it came. **Kills:** if the wait is under ten minutes and the fare is ordinary, “reliably there” is already solved in Texas and our edge is the state contract, not the car. If it never comes at closing, that’s the gap, on the record, in the moon-shot state. 2. **Ask Texas’s highway-safety office** the same one question Utah gets: what number would prove a closing-time ride worked? ([TxDOT Traffic Safety](#)) **Kills:** silence for 30 days. 3. **Read Utah’s crash count** (five minutes, the state’s own server — [link](#)) and decide if 380 is a number worth a year. **Assumes:** you’ll do a 1 a.m. errand for a plan you don’t believe. **Promise:** you’ll know in one night whether the product is real. **Dies with it:** nothing but the night.

K.A. — Texas

Asked to be: founder; the one who runs the money tests Erik can’t be trusted to run on himself. **Brings:** distance from him, an address in Texas, and a second run of every Texas test so B.A.’s night isn’t the only night. **Your three tests (all \$0):** 1. **Read Andrea’s note before Andrea does.** One page (V1.1 ANDREA). **Kills:** if the brake isn’t in it — money moves before the state signs and the company account exists — refuse it. And if the related-party sentence isn’t in it, refuse it too. 2. **Three quotes:** a used car fit for six nights a week, a \$1.5M for-hire policy, Starlink Roam. **Kills:** if the three total over \$50,000, the number on Andrea’s page is wrong. 3. **Ride the robotaxi on a different Saturday than B.A.** Two logs beat one. **Assumes:** you’d rather find the hole than be told there isn’t one. **Promise:** the first car is bought on a number two people checked. **Dies with it:** the note, if it’s wrong — which is the point.

A.A. — Utah, and the footprint

Asked to be: founder; the one whose addresses are the map. **Brings:** the footprint F above — the first county, the Nevada line Wendover sits on, St. George, a California door, an Idaho one, and two Mexican states; plus a family of seven (by his word) with homes across them. **Your three tests (all \$0):** 1. **Midvale planning, one email:** is a car depot or a licensed treatment facility allowed at 7045 S 300 E? ([Midvale Community Development](#)) **Kills:** “no” kills the address, not the depot. 2. **The listing agent, one call:** will the seller carry part of the price on one unit? (Public record: six twin homes, Level 12 LLC, listed 07-29-2026 at \$5,899,900 — [assessor](#).) **Kills:** “no carry” makes it a bank deal at 25-35% down, which isn’t 2026. 3. **Wendover, from the Nevada side:** drive West Wendover → Midvale at 1 a.m. with two phones logging signal every 30 seconds. **Kills:** signal the whole way means the sky layer is a luxury — a good failure. Wendover, Utah (1,115 people) is the USDA-eligible town; West Wendover is Nevada. **Assumes:** the family footprint is a willingness, not just a set of addresses. **Promise:** five states and a border with a bed to sleep in — and Idaho is the second state’s door (test 11.1 in the full trail) with somewhere to stay while asking it. **Dies with it:** the footprint speed; Utah stands alone.

The shared list — the only eight tests that matter this year

#	Test	Who	Cost	Kills
1	Run the crash count	any	\$0, 5 min	the premise

#	Test	Who	Cost	Kills
2	Email Utah's highway-safety office the yardstick question (UHSO , bafreeman@utah.gov)	A.A.	\$0, 30 days	fundability by anyone official
3	Two bars in writing	A.A.	\$0, 30 days	the venue side
4	Three quotes	K.A.	\$0, 2 weeks	Andrea's number
5	Ride a Texas robotaxi at closing, twice	B.A., K.A.	\$0, two nights	"reliably there" as our edge, or proves the gap
6	Midvale zoning + seller carry	A.A.	\$0, 30 days	the address
7	File the two names (\$59 + \$59 + \$22) and the IRS short form (\$275)	all three	\$415	nothing — this is the go
8	Ninety nights, one car, logged	the company	Andrea's note	the collateral is a used car

Everything past 8 is a gate, not a test: the grant (Feb 2027, pays for the program not the car), the building, the detox tenant, the day shift, the second county, the sky, the ten states, the six moon shots — each named in V2.0 JOSHUA and V3.6.1 FOREST with the one thing that opens it. The full claim-by-claim trail with sources is V1.1 FOUNDERS in prior/.

What Erik owns, in one line each

Nine copyright packets **prepared, not filed** (two held; deposits are public). Seven trademark candidates, **none filed**, search first (\$0), \$350 a class; "cybervan" excluded — Tesla's word. One possible patent (the Ribbon), **nothing filed**; a provisional buys the date for under \$150. About \$3,700 if all of it goes; none needed for the first car. The company licenses what it uses on your terms.

The first hires — candidates, first names only, none asked yet

#	Candidate	Named by	Why (as known)	Kills
1	Kristin	Erik	The reader the <i>Nursing State</i> guide was written for: already knows the easy version, wants to be a nurse, trade is repeat trust with a chair, builds security from small regular amounts, neither family nor founder. Night lead and dispatcher; the first person who could open Wendover.	Ask her
2	Alba	A.A. sub 1	Not yet stated — see the question below	Ask him, then her
3	Lashae	A.A. sub 1	Not yet stated — see the question below	Ask him, then her
4	A.A. sub 1 himself	A.A. sub 1	"Rounding it out afterward" — he comes in after #2 and #3, not before	Ask him why the order

The question for A.A. sub 1, to be answered in his own words on this page:

Why Alba? Why Lashae? What does each of them do that the first car and the first ninety nights need — and why do you come in after them rather than first? What do you want the role to be when you do?

Until he answers, #2 and #3 are names and nothing else. The answer goes here verbatim, and the four reasons a founder can check in ten minutes get written under each name the way Kristin's are. **Assumes:** he has reasons that survive the same test his hires will. **Promise:** the first four hires are chosen by the people who'll work beside them, not by Erik. **Dies with it:** two names; the roles stay.

One rule for all four: first names only on any page that leaves the vault; no records searched on any of them; each is asked before anything is written about them beyond this table.

0! — a reading, flagged. "A.A. (seven subtypes)" is read here as: A.A is a family seat of seven, indexed 1...7, with A.A' outside it; the homes are in the algebra above. "Naurita" is read as **Nayarit**, the Mexican state. If either is wrong, one word from Erik fixes the page.

Initials only. No names on any page that leaves the vault. 2026-09-21.
