

README

Tentative One

A Phoenix LiveView app that moves on **1** unless told otherwise.

Paste steps, one per line. Each step runs on its own as a **tentative 1**. Only an inflection point stops a step: deleting, sending, money, regulated data, an email address, or a password. Then one key decides: **1 clears it · 0 skips it**. A 0 skips only that step, and the rest still runs. A 0 while the run is moving stops the whole run. Anything you type in the box is you telling it otherwise, and it becomes the next step. **West** counts every keystroke you had to spend.

Part	File
The gate: which steps are 0s	lib/tentative_one/gate.ex
The run: tick, hold, 1, 0, otherwise	lib/tentative_one/run.ex
The page	lib/tentative_one_web/live/run_live.ex

Specs: 399

Suite	Specs	Ran
gate_test + gate_corpus_test: 125 zeros, 67 ones	200	green
run_test: core behavior	10	green
run_matrix_test: 4 states × 10 inputs, 6 reasons × 3	59	green
run_property_test: 100 seeded random runs, 7 laws checked after every move	100	green
run_live_test: LiveView	50	written, not yet run

The core 349 run with plain Elixir: `elixir test/run_core.exs`. The full 399 run with mix test once deps can be fetched.
