

PROJECT_LOG

The Breadcrumb Trail — Project Log

Newest first. Opened at inception 2026-09-21 alongside METHODOLOGY_LOG.md.

Session 1 — 2026-09-21 — Inception

Goal / context He rejected V3.0 of his punch list — choices hidden inside steps, no line from step 1 to step 2 — and asked for a restart: one step at a time, the choice named, its effect on the next step written, a source link for when he gets lost. 00_MIND/plans/V4.0 PUNCH LIST.md is the result: 30 steps, five parts, one decision before step 1 (who owns the company today — default: him alone, founders by amendment).

Then his hint: Zone I just entered the picture — a university's students carry ~4,000 tasks cradle to grave and would want exactly this. Start with Zone V.

Decisions - Its own root, at inception, in Zone V. The form is a method and the method is his; the domain (his own filings) is not the product. - **Zone I stays behind the drawbridge.** No proposal, no build, nothing on institutional equipment until he says; if he says, it crosses as method only and never comes back. - **The deposit comes before the proposal.** The next copyright packet is the form itself, domain-stripped.

Open threads - His call: (a) product, (b) proposal, (c) both — default (c). - Whether the form gets a name of its own or ships under *Joshua Says*.
