Advanced Clinical in Special Education

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

An FBA shows that a third grader shouts out during lessons to get the teacher's attention. He is the youngest of five and has a new puppy at home. Which replacement behavior fits the function?

- A. Talking about his puppy during share time.
- B. Raising a hand or using a signal card to get the teacher's attention, which the teacher responds to quickly.
- C. Working quietly alone at a desk far from the teacher.
- D. Earning time with a toy if he is quiet all day.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A behavior plan teaches a student to hand in a "break card" to leave the task for two minutes. What function is this replacement matched to?

- A. Sensory stimulation.
- B. Escape or avoidance of the task.
- C. Access to a tangible item.
- D. Attention from peers.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A middle school with 900 students and a new cafeteria has not yet taught school-wide expectations. Office referrals are high across grades. A team suggests writing individual behavior plans for 150 students. What should come first?

- A. Add small social-skills groups for the 150 students only.
- B. Write the 150 individual plans now.
- C. Redesign the cafeteria line.
- D. Teach and reinforce clear school-wide expectations for all students (Tier 1).

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A school's Tier 1 system is working well. About what share of students should need only Tier 1 support?

- A.** About 15%.
- B.** 100%.
- C.** About 5%.
- D.** About 80%.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A second grader scored well below benchmark on the fall reading screener. Her class uses a strong core reading program, and her family recently moved into a larger apartment. What should happen next under RTI?

- A.** Refer her immediately for special education placement.
- B.** Wait until spring to see if she catches up.
- C.** Provide small-group, more intensive intervention and monitor progress often.
- D.** Change her seat, since her home moved.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

During a phonics drill, a student reads "ship" as "sip." The class uses laminated cards, and the lesson is in the morning. What is the best correction?

- A.** Reprint the cards in a larger font.
- B.** Say "This word is ship," have the student read it, and return to it later to check.
- C.** Let it go so the student is not discouraged.
- D.** Say "No, try again" and wait.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A tenth grader with a writing disability understands history content well but writes only a few words on essays because spelling and handwriting slow him down. He is on the soccer team and works weekends. The IEP team is meeting. What should they consider?

- A. Assistive technology such as speech-to-text or word prediction to help him show what he knows.
- B. AT only if he has a physical disability.
- C. A modified essay with less content.
- D. Fewer soccer practices so he can write more.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A 16-year-old with a learning disability has extended time on tests in her IEP but never asks for it, and her teachers forget. She wants to become a nurse and volunteers at an animal shelter. What should the special educator do?

- A. Teach her to explain her needs and request her accommodations, and have her help lead her IEP meeting.
- B. Arrange more hours at the shelter.
- C. Email her teachers each week so she never has to ask.
- D. Remove extended time since she does not use it.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A candidate records 10 minutes of a math lesson to reflect on engagement. During that time, students gave 12 responses in total. The video was filmed with a borrowed tablet. Compared with a common target of about 3 responses per minute, what does the data show?

- A. 12 responses per minute, well above the target.
- B. Enough, since any responses mean students are engaged.
- C. 0.83 responses per minute.
- D. 1.2 responses per minute, well below the target.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

A candidate wants students to reach 3 responses per minute during a 15-minute guided practice. How many responses should she plan for?

- A.** 45
- B.** 15
- C.** 18
- D.** 5

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A candidate uses 10-second partial-interval recording for 5 minutes to track a student's out-of-seat behavior. The student was out of seat at some point in 18 of the intervals. The observation was in the school's newer building. What percent of intervals had the behavior?

- A.** 36%
- B.** 18%
- C.** 60%
- D.** 60%, and the student was out of seat for 60% of the time.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12. [TRANSFER — reversed stem / different variable]

A team wants a measure that will not overstate how much a student stays on task. Which interval method is more conservative for on-task behavior?

- A.** Partial-interval recording.
- B.** Latency recording.
- C.** Whole-interval recording.
- D.** Event recording.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

An FBA shows that a third grader shouts out during lessons to get the teacher's attention. ~~He is the youngest of five and has a new puppy at home.~~ Which replacement behavior fits the function?

Target word: replacement behavior **Decides:** Function is attention.

A	Camouflage	Answers the puppy detail; not a replacement tied to the lesson behavior.
B	Correct	The replacement gets the same payoff — attention — in an acceptable way.
C	Inverted operation	Removes attention, the very thing he is seeking, so the shouting will continue.
D	Adjacent category	A reward for no shouting, but no replacement that meets the attention need.

2. Answer B Concept 1 • transfer

A behavior plan teaches a student to hand in a “break card” to leave the task for two minutes. What function is this replacement matched to?

Target word: reverse: infer function from replacement **Decides:** A break card gives escape.

A	Adjacent category	Possible but the card is built around leaving the task.
B	Correct	The replacement allows a brief break — the same payoff as escape.
C	Confusion set	No item is gained.
D	Confusion set	The card gives a break, not peer attention.

3. Answer D Concept 2

A middle school ~~with 900 students and a new cafeteria~~ has not yet taught school-wide expectations. Office referrals are high across grades. A team suggests writing individual behavior plans for 150 students. What should come first?

Target word: which tier first **Decides:** Tier 1 is not in place.

A	Dropped element	Skips the universal tier.
B	Inverted operation	Starts at Tier 3 before Tier 1.
C	Camouflage	Answers the cafeteria detail, not the system gap.
D	Correct	Universal supports come first; many problems drop once they are in place.

4. Answer D Concept 2 • transfer

A school's Tier 1 system is working well. About what share of students should need only Tier 1 support?

Target word: reverse: expected tier share **Decides:** Commonly cited as about 80%.

A	Confusion set	That is the usual Tier 2 share.
B	Absolute language	Some students will always need more than universal support.
C	Confusion set	That is the usual Tier 3 share.
D	Correct	The usual model expects about 80% to respond to Tier 1, about 15% to need Tier 2, and about 5% Tier 3.

5. Answer C Concept 3

A second grader scored well below benchmark on the fall reading screener. Her class uses a strong core reading program, and ~~her family recently moved into a larger apartment.~~ What should happen next under RTI?

Target word: next step after a low screener **Decides:** Below benchmark with sound core.

A	Adjacent category	RTI is a general education process; a tier is not special education.
B	Inverted operation	Waiting to fail is what RTI is meant to prevent.
C	Correct	Tier 2 adds intensity for students not meeting benchmark.
D	Camouflage	Answers the home detail, which does not decide.

6. Answer B Concept 4

During a phonics drill, a student reads “ship” as “sip.” ~~The class uses laminated cards, and the lesson is in the morning.~~ What is the best correction?

Target word: error correction **Decides:** An error during practice needs an immediate model.

A	Camouflage	Answers the materials detail; the error is decoding sh.
B	Correct	Model-student response-delayed check is the standard correction.
C	Inverted operation	Unfixed errors get practiced.
D	Dropped element	Drops the model, so the student may repeat the error.

7. Answer A Concept 5

A tenth grader with a writing disability understands history content well but writes only a few words on essays because spelling and handwriting slow him down. ~~He is on the soccer team and works weekends.~~ The IEP team is meeting. What should they consider?

Target word: AT for access **Decides:** Barrier is written output, not understanding.

A	Correct	AT is matched to the task barrier and considered for every IEP.
B	Absolute language	AT is considered for all students with IEPs.
C	Adjacent category	He understands the content; reducing it lowers expectations without addressing access.
D	Camouflage	Answers the schedule details, not the barrier.

8. Answer A Concept 6

A 16-year-old with a learning disability has extended time on tests in her IEP but never asks for it, and her teachers forget. She wants to become a nurse ~~and volunteers at an animal shelter.~~ What should the special educator do?

Target word: build self-advocacy **Decides:** The student does not ask for her supports.

A	Correct	Self-advocacy is taught and practiced, and the student grows into the lead role.
B	Camouflage	Answers the volunteering detail.
C	Inverted operation	Keeps adults in charge; she never practices advocacy.
D	Adjacent category	Non-use is a self-advocacy issue, not proof she does not need it.

9. Answer D Concept 7

A candidate records 10 minutes of a math lesson to reflect on engagement. During that time, students gave 12 responses in total. ~~The video was filmed with a borrowed tablet.~~ Compared with a common target of about 3 responses per minute, what does the data show?

Target word: OTR rate vs. target **Decides:** $12 \div 10 = 1.2$ per minute.

A	Wrong stem number	Treats the total as a per-minute rate.
B	Absolute language	The rate, not the presence of responses, matters.
C	Inverted operation	$10 \div 12$ divides minutes by responses.
D	Correct	$12 \text{ responses} \div 10 \text{ minutes} = 1.2$ per minute, less than half of about 3.

10. Answer A Concept 7 • transfer

A candidate wants students to reach 3 responses per minute during a 15-minute guided practice. How many responses should she plan for?

Target word: solve for total **Decides:** 3×15 .

A	Correct	$3 \text{ responses per minute} \times 15 \text{ minutes} = 45$.
B	Wrong stem number	The number of minutes, not responses.
C	Dropped element	Adds $3 + 15$.
D	Inverted operation	$15 \div 3$ divides instead of multiplying.

11. Answer C Concept 8

A candidate uses 10-second partial-interval recording for 5 minutes to track a student's out-of-seat behavior. The student was out of seat at some point in 18 of the intervals. ~~The observation was in the school's newer building.~~ What percent of intervals had the behavior?

Target word: percent of intervals **Decides:** 5 minutes = 30 intervals of 10 seconds.

A	Dropped element	Divides by 50, not the 30 intervals in five minutes.
B	Wrong stem number	Uses the count as the percent.
C	Correct	$5 \text{ min} \times 6 \text{ intervals per min} = 30 \text{ intervals}$; $18 \div 30 = 60\%$.
D	Adjacent category	Partial-interval tends to overestimate time; it is not a time measure.

12. Answer C Concept 8 • transfer

A team wants a measure that will not overstate how much a student stays on task. Which interval method is more conservative for on-task behavior?

Target word: reverse: pick method by bias **Decides:** Whole-interval requires the behavior the entire interval.

A	Inverted operation	Tends to overestimate, the opposite of what is wanted.
B	Adjacent category	Measures time to start, not ongoing behavior.
C	Correct	It counts an interval only if the behavior lasts the whole interval, so it tends to underestimate.
D	Confusion set	Counts occurrences, not intervals.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	4	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	5	
Camouflage	Answers a stem fact that was never the question.	6	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	FBA to behavior plan: replacement behavior	A behavior intervention plan teaches a replacement behavior that gets the student the same result (function) more easily than the problem behavior.	Picking a replacement that does not serve the same function, such as “sit quietly” for a student seeking attention.	A behavior plan that names what to stop but not what to do instead.
2	PBIS tiers	Tier 1 supports all students school-wide, Tier 2 adds targeted small-group supports for some, and Tier 3 gives intensive individualized support for a few.	Starting with Tier 3 plans before universal expectations are in place.	The share of students a support is meant for.
3	Response to Intervention / MTSS	Students who do not respond to good core instruction get more intensive, more frequent, smaller-group intervention, with progress data guiding moves between tiers.	Waiting for a student to fail badly before giving help, or equating a tier with special education.	A student behind in core instruction with screening data.
4	Error correction	Correct errors right away: model the correct response, have the student give it, then return to the item later to check.	Saying “No, try again” with no model, or letting errors pass to avoid discouraging the student.	A student makes the same error during practice.
5	Assistive technology consideration	AT must be considered for every student with an IEP, and the choice should match the student, the task, and the setting, from low-tech to high-tech.	Thinking AT means only expensive devices, or only for students with physical disabilities.	A task a student cannot complete because of access, not understanding.
6	Self-determination and self-advocacy	Teach students to know their strengths and needs, set goals, and ask for their accommodations, with the student taking a growing role in IEP meetings.	Having adults make every decision and speak for the student.	An older student who never asks for supports listed in the IEP.
7	Opportunities to respond (OTR)	High rates of student responses (often cited as about 3 or more per minute in teacher-led instruction) raise engagement and learning and lower off-task behavior.	Long teacher talk with few student responses.	A count of responses over minutes of instruction.
8	Interval recording	Percent of intervals = intervals with the behavior ÷ total intervals × 100. Partial-interval tends to overestimate a behavior; whole-interval tends to underestimate it.	Mixing up which method over- or underestimates, or dividing by the wrong total.	Interval counts reported for a behavior.

Course scope (public description): Advanced Clinical provides aspiring educators with real-world classroom experience. This course emphasizes the importance of hands-on learning, offering candidates the unique

opportunity to observe and participate in classroom environments under the guidance of experienced mentors. The curriculum includes demonstrating reflective practice, classroom engagement techniques, instructional strategies, and effective communication skills with students and colleagues through a pedagogical performance assessment. Through this immersive experience, candidates not only observe the daily responsibilities of a teacher, but also start to develop their own teaching style and philosophy, laying a solid foundation for their future careers in education. This course is taken immediately prior to Student Teaching I as part of an engaging and intensive clinical experience.
