Advanced Clinical in Special Education

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A sixth grader with a reading disability currently reads 62 correct words per minute on grade-level passages. His favorite subject is art, and he has two dogs. Which goal is measurable?

- A. "Given a sixth-grade passage, the student will read aloud at 90 correct words per minute on 3 of 4 probes by May."
- B. "The student will improve his reading."
- C. "The student will read at 62 words per minute."
- D. "The student will enjoy reading about art and dogs."

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A goal reads: "Given ten single-digit addition problems, the student will write the correct sum." Which part is missing?

- A. A present-level statement inside the goal.
- B. A criterion for mastery, such as 9 of 10 correct on three probes.
- C. The condition.
- D. An observable behavior.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A fourteen-year-old with a moderate intellectual disability is learning to wash his hands at school. He likes trains and uses a red backpack. The teacher wants to teach and track this skill. What should come first?

- A. Write a task analysis listing each step, such as turn on water, wet hands, apply soap, scrub, rinse, dry.
- B. Wait until he shows interest in learning it.
- C. Use a train-themed soap to motivate him.
- D. Teach the whole routine and mark it pass or fail each day.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A student with autism now puts on her coat only when the aide gives full hand-over-hand help each day. The aide has worked at the school for nine years and is very patient. The student can move her arms without help. What is the best change?

- A. Keep full hand-over-hand help, since it works.
- B. Stop all prompts at once.
- C. Fade the prompt on a plan, moving to partial physical, then gestural, then verbal, then independent.
- D. Assign a different aide.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

A teacher is using least-to-most prompting. The student does not respond to a verbal prompt. What comes next?

- A. Full physical guidance right away.
- B. End the trial and try again tomorrow.
- C. A gestural or model prompt.
- D. Repeat the verbal prompt louder several times.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

A student's baseline was 20 correct words per minute in September, and the goal is 50 correct words per minute in 30 weeks. His teacher is new to the school and uses a green graph. What is the weekly growth rate the aimline expects?

- A. 1.67 words per week.
- B. 1 word per week.
- C. 0.67 words per week.
- D. 30 words per week.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

A teacher's rule is: four consecutive data points below the aimline means change instruction. A student's last four points are all below the line. What should the teacher do?

- A.** Keep going and collect four more points.
- B.** Change the instruction.
- C.** Raise the goal.
- D.** Lower the goal to match the data.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A special education teacher is planning a seventh-grade science lesson on cells for a class with students who have reading, attention, and motor disabilities. The school just installed new lab sinks, and the lesson is on a Friday. Which plan best reflects UDL?

- A.** Teach one way, then add accommodations for students who struggle.
- B.** Give a lab activity at the new sinks for everyone.
- C.** Let only students with IEPs use the audio text.
- D.** Offer text with audio, a diagram and a model, and let students show learning by labeling, speaking, or typing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

A lesson offers students a choice of topic within the standard and lets them set their own goals for the task. Which UDL principle is this mainly about?

- A.** Accommodation.
- B.** Representation.
- C.** Action and expression.
- D.** Engagement.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A paraprofessional in a resource room, who is well liked by families and bilingual, begins choosing new reading materials and deciding which students to test each week. The teacher is busy with IEP meetings. What should the teacher do?

- A.** Keep planning and assessment decisions with the teacher and give the para clear, written directions for tasks.
- B.** Stop the para from working with students at all.
- C.** Let the para continue, since the teacher is busy.
- D.** Have the para lead IEP meetings since she is bilingual.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

Before an annual IEP meeting at a school with a new playground, a teacher drafts all goals and plans to hand the parents the completed IEP to sign. The parents both work night shifts. What should change?

- A.** Hold the meeting at night shift time without asking.
- B.** Nothing; parents only need to sign.
- C.** Mail the finished IEP so they do not need to come.
- D.** Ask the parents beforehand for their input on the child's needs and goals and treat the draft as open to change.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

Students in a self-contained class often push and shout when lining up for the bus at 2:45. The bus loop was recently repaved, and there are three buses. What should the teacher do before dismissal?

- A.** Wait for pushing, then correct each student.
- B.** Ask the office to reduce the buses to two.
- C.** Just before lining up, remind students of the lining-up expectations and praise those who follow them.
- D.** Take away recess from the whole class every day.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A sixth grader with a reading disability currently reads 62 correct words per minute on grade-level passages. ~~His favorite subject is art, and he has two dogs.~~ Which goal is measurable?

Target word: measurable goal **Decides:** Needs condition, behavior, and criterion.

A	Correct	Condition, observable behavior, and criterion are all present.
B	Dropped element	No condition or measurable criterion.
C	Wrong stem number	That is his current level, not a goal.
D	Camouflage	Answers the interest details; enjoyment is not measurable.

2. Answer B Concept 1 • transfer

A goal reads: "Given ten single-digit addition problems, the student will write the correct sum." Which part is missing?

Target word: find the missing component **Decides:** Condition and behavior are present.

A	Adjacent category	Present levels are written separately, not inside the goal.
B	Correct	Without a criterion, no one can say when the goal is met.
C	Inverted operation	"Given ten single-digit problems" is the condition.
D	Confusion set	"Write the correct sum" is observable.

3. Answer A Concept 2

A fourteen-year-old with a moderate intellectual disability is learning to wash his hands at school. ~~He likes trains and uses a red backpack.~~ The teacher wants to teach and track this skill. What should come first?

Target word: first step for a multistep skill **Decides:** Break it into steps.

A	Correct	Small ordered steps can each be taught and measured.
B	Adjacent category	Readiness waiting is not an instructional plan.
C	Camouflage	Answers the interest detail, not the teaching method.
D	Dropped element	Loses the step-by-step detail needed to teach and track.

4. Answer C Concept 3

A student with autism now puts on her coat only when the aide gives full hand-over-hand help each day. ~~The aide has worked at the school for nine years and is very patient.~~ The student can move her arms without help. What is the best change?

Target word: address prompt dependence **Decides:** A full prompt is used daily with no fading.

A	Inverted operation	Keeps the prompt that causes dependence.
B	Absolute language	Abrupt removal usually leads to errors; fading is gradual.
C	Correct	Planned fading moves support toward independence.
D	Camouflage	Answers the aide detail; the prompting plan is the issue.

5. Answer C Concept 3 • transfer

A teacher is using least-to-most prompting. The student does not respond to a verbal prompt. What comes next?

Target word: next step in least-to-most **Decides:** Move to the next more intrusive prompt.

A	Absolute language	Skips the levels between.
B	Dropped element	Drops the prompt sequence entirely.
C	Correct	Least-to-most adds support one level at a time.
D	Inverted operation	Stays at a failed level and builds nagging.

6. Answer B Concept 4

A student's baseline was 20 correct words per minute in September, and the goal is 50 correct words per minute in 30 weeks. ~~His teacher is new to the school and uses a green graph.~~ What is the weekly growth rate the aimline expects?

Target word: aimline slope **Decides:** $(50 - 20) / 30$ weeks.

A	Dropped element	$50 / 30$ ignores the baseline.
B	Correct	$(50 - 20) = 30$; $30 / 30$ weeks = 1 word per minute per week.
C	Inverted operation	$20 / 30$ uses the baseline as the gain.
D	Wrong stem number	The total gain, not per week.

7. Answer B Concept 4 • transfer

A teacher's rule is: four consecutive data points below the aimline means change instruction. A student's last four points are all below the line. What should the teacher do?

Target word: apply the decision rule **Decides:** Four points below.

A	Dropped element	Ignores the rule already met.
B	Correct	The rule is met; the current approach is not working fast enough.
C	Inverted operation	Raising the goal follows points above the aimline.
D	Adjacent category	Goals are not lowered first; instruction changes first.

8. Answer D Concept 5

A special education teacher is planning a seventh-grade science lesson on cells for a class with students who have reading, attention, and motor disabilities. ~~The school just installed new lab sinks, and the lesson is on a Friday.~~ Which plan best reflects UDL?

Target word: UDL plan **Decides:** Multiple means built in from the start.

A	Inverted operation	That is retrofitting, the opposite of design from the start.
B	Camouflage	Answers the sinks detail; a single mode is not UDL.
C	Adjacent category	UDL options are for all learners, not only those with IEPs.
D	Correct	Representation, action/expression, and engagement are planned up front.

9. Answer D Concept 5 · transfer

A lesson offers students a choice of topic within the standard and lets them set their own goals for the task. Which UDL principle is this mainly about?

Target word: reverse: name the principle **Decides:** Choice and goal-setting target motivation.

A	Adjacent category	UDL is design for all, not an individual accommodation.
B	Confusion set	Representation is about how information is presented.
C	Confusion set	That is about how students show what they know.
D	Correct	Choice and self-set goals support the why of learning.

10. Answer A Concept 6

A paraprofessional in a resource room, ~~who is well liked by families and bilingual~~, begins choosing new reading materials and deciding which students to test each week. The teacher is busy with IEP meetings. What should the teacher do?

Target word: para role **Decides:** Paras carry out teacher-planned work.

A	Correct	The teacher directs instruction; paras implement it.
B	Absolute language	Paras may work with students under teacher direction.
C	Adjacent category	Workload does not change who is responsible for instruction.
D	Camouflage	Answers the language detail; leading IEP meetings is not a para role.

11. Answer D Concept 7

Before an annual IEP meeting ~~at a school with a new playground~~, a teacher drafts all goals and plans to hand the parents the completed IEP to sign. ~~The parents both work night shifts~~. What should change?

Target word: parent participation **Decides:** Parents are equal team members.

A	Camouflage	Answers the schedule detail without asking the family.
B	Inverted operation	Treats parents as signers, not team members.
C	Dropped element	Removes their participation entirely.
D	Correct	Parents must be able to participate meaningfully in decisions.

12. Answer C Concept 8

Students in a self-contained class often push and shout when lining up for the bus at 2:45. ~~The bus loop was recently repaved, and there are three buses~~. What should the teacher do before dismissal?

Target word: proactive move before a known trigger **Decides:** Problems happen at a predictable time.

A	Inverted operation	Reactive; the trigger is known.
B	Camouflage	Answers the bus detail, not the behavior.
C	Correct	Precorrection prevents predictable errors.
D	Adjacent category	Punishment does not teach the expected behavior.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	6	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	3	
Camouflage	Answers a stem fact that was never the question.	7	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Measurable annual IEP goals	A measurable goal names the condition, an observable behavior, and a criterion for mastery, based on the present level of performance.	Writing goals like “will improve reading” with no behavior or criterion.	A goal statement to check or fix.
2	Task analysis	Break a complex skill into small, ordered, teachable steps and teach and measure each step.	Teaching the whole skill at once and recording only pass or fail.	A multistep daily-living or academic routine a student cannot yet do.
3	Prompt hierarchy and fading	Use the least support that works (or most-to-least for new skills) and fade prompts on a plan so the student becomes independent.	Keeping the same full prompt forever, which builds prompt dependence.	A student who performs only when an adult prompts.
4	Progress-monitoring decision rules	Plot data against an aimline; several consecutive points below the aimline call for an instructional change, several above call for raising the goal.	Changing instruction after one low score, or never changing despite a flat trend.	A graph, a goal rate per week, or a run of data points.
5	Universal Design for Learning	Plan from the start for multiple means of engagement, representation, and action and expression so more learners can access the lesson.	Treating UDL as retrofitting accommodations for one student after the lesson is built.	Designing a lesson for a whole class with varied needs.
6	Directing paraprofessionals	The teacher plans instruction, assigns and trains, and evaluates; the paraprofessional carries out planned tasks under teacher direction.	Letting a paraprofessional design instruction or make placement decisions alone.	A paraprofessional is choosing what or how to teach.
7	Parents as equal IEP team members	Parents are required members of the IEP team; their input on the child’s needs and goals is sought and considered.	Presenting a finished IEP for a signature.	Preparing for an IEP meeting or conference.
8	Precorrection	Remind students of the expected behavior just before a known trigger, rather than waiting to correct errors afterward.	Only reacting after the behavior occurs.	A predictable time or setting when problems happen.

Course scope (public description): Advanced Clinical provides aspiring educators with real-world classroom experience. This course emphasizes the importance of hands-on learning, offering candidates the unique opportunity to observe and participate in classroom environments under the guidance of experienced mentors. The curriculum includes demonstrating reflective practice, classroom engagement techniques, instructional strategies, and effective communication skills with students and colleagues through a pedagogical performance assessment. Through this immersive experience, candidates not only observe the daily responsibilities of a teacher, but also start to develop their own teaching style and philosophy, laying a solid foundation for their future careers in education. This course is taken immediately prior to Student Teaching I as part of an engaging and intensive clinical experience.
