BSNU Capstone

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A nurse leading a capstone project on a 36-bed unit with a new break room wants to replace paper handoff with a bedside SBAR tool. Staff say the current method works fine. She shares unit data linking handoff gaps to recent falls. Which Lewin stage is she in?

- A. Planning, the first step of the nursing process
- B. Unfreezing
- C. Moving
- D. Refreezing

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Six months after a new bedside handoff began, the manager adds it to unit policy and orientation and starts monthly audits. Which Lewin stage is this?

- A. Moving
- B. Refreezing
- C. Unfreezing
- D. Evaluation in the nursing process

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A chief nursing officer at a health system with a new logo wants to reduce central line infections. Her budget request was approved last week. According to Kotter, what should she do first?

- A. Anchor the change in the culture.
- B. Announce short-term wins.
- C. Form a guiding coalition of unit leaders.
- D. Create a sense of urgency by sharing infection data and its impact on patients.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A capstone team on an oncology unit with a new espresso machine proposes changing IV tubing change times. Two senior night-shift nurses openly oppose it. The unit manager is on vacation. What is the best approach?

- A. Wait until the manager returns before doing anything.
- B. Engage the two nurses early, ask about their concerns, and include them in planning.
- C. Abandon the project, since resistance always means it is flawed.
- D. Leave them out of planning to avoid delays.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A student on a unit that recently got new beds writes goals for a project to reduce catheter-associated urinary tract infections (CAUTI). Her preceptor has 20 years of experience. Which goal is SMART?

- A. Improve CAUTI outcomes as much as possible.
- B. Educate staff about catheter care.
- C. Eliminate all infections on every unit forever.
- D. Reduce the CAUTI rate on 4 West from 2.0 to 1.0 per 1,000 catheter days by June 30 using a nurse-driven removal protocol.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

A goal reads: “Reduce patient falls on 5 North by 30%.” Which SMART element is missing?

- A. Achievable
- B. Measurable
- C. Time-bound
- D. Specific

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A project team at a hospital with a new helipad plans to test hourly rounding to reduce call-light use. The team leader recently earned a certification. What must the team gather before starting?

- A. Baseline call-light data to compare with results after the change
- B. Nothing, since hourly rounding is already proven everywhere
- C. Only data collected after rounding starts
- D. Staff opinions about rounding only

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

8.

A capstone project on a unit with a new manager raised hand hygiene compliance from 72% to 94% in three months. The project lead leaves in a week. Which action best sustains the change?

- A. Celebrate the results and stop monitoring.
- B. Nothing more is needed, since compliance will stay at 94% permanently.
- C. Rely on the project lead's reminders.
- D. Build the practice into policy, name a unit champion, and continue audits with feedback.

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

9.

A nurse introducing a new bedside glucose meter on a unit with 60 staff and a recent Magnet designation identifies nurses who are respected and try new things early. Which Rogers category are they, and why target them?

- A. Everyone adopts at the same time, so categories don't matter.
- B. Innovators; they drive the majority's decision.
- C. Early adopters; as opinion leaders, they influence the majority.
- D. Laggards; win them over first.

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

10. [TRANSFER — reversed stem / different variable]

In Rogers' diffusion of innovations, which group is most skeptical and adopts last?

- A.** Innovators
- B.** Late majority
- C.** Laggards
- D.** Early adopters

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A falls-prevention program on a unit with 30 beds and a new mural costs \$40,000 a year. It prevents falls that would have cost \$100,000. The unit also won a staff award. What is the ROI?

- A.** 150%
- B.** 250%
- C.** \$60,000
- D.** 60%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12. [TRANSFER — reversed stem / different variable]

A program has an ROI of 200% and a net benefit of \$50,000. What did it cost?

- A.** \$25,000
- B.** \$100,000
- C.** \$75,000
- D.** \$50,000

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

A nurse leading a capstone project on a ~~36-bed unit with a new break room~~ wants to replace paper handoff with a bedside SBAR tool. Staff say the current method works fine. She shares unit data linking handoff gaps to recent falls. Which Lewin stage is she in?

Target word: Lewin stage **Decides:** She is building readiness for change.

A	Adjacent category	Not a stage of Lewin's model.
B	Correct	Showing the need for change prepares staff to let go of the old way.
C	Confusion set	Moving is implementing the new tool.
D	Inverted operation	Refreezing locks in a change after it happens.

2. Answer B Concept 1 • transfer

Six months after a new bedside handoff began, the manager adds it to unit policy and orientation and starts monthly audits. Which Lewin stage is this?

Target word: stage from action **Decides:** Locking in the change.

A	Confusion set	The change is already in place.
B	Correct	Policy, orientation, and audits stabilize the new practice.
C	Inverted operation	Unfreezing happens before the change.
D	Adjacent category	A different model.

3. Answer D Concept 2

A chief nursing officer ~~at a health system with a new logo~~ wants to reduce central line infections. ~~Her budget request was approved last week.~~ According to Kotter, what should she do first?

Target word: Kotter step 1 **Decides:** Change starts with urgency.

A	Confusion set	That is the final step.
B	Inverted operation	Wins come late in the sequence.
C	Adjacent category	That is step 2.
D	Correct	Step 1 in Kotter's model.

4. Answer B Concept 3

A capstone team on an oncology unit ~~with a new espresso machine~~ proposes changing IV tubing change times. Two senior night-shift nurses openly oppose it. ~~The unit manager is on vacation.~~ What is the best approach?

Target word: response to resistance **Decides:** Resisters can reveal real barriers.

A	Camouflage	The manager's absence does not decide how to handle resistance.
B	Correct	Involvement turns resistance into input.
C	Absolute language	Resistance is normal and often manageable.
D	Inverted operation	Exclusion increases resistance.

5. Answer D Concept 4

A student on a unit ~~that recently got new beds~~ writes goals for a project to reduce catheter-associated urinary tract infections (CAUTI). ~~Her preceptor has 20 years of experience.~~ Which goal is SMART?

Target word: SMART goal **Decides:** Specific unit, measurable target, deadline.

A	Dropped element	No measure or deadline.
B	Adjacent category	An activity, not an outcome goal.
C	Absolute language	Not achievable or time-bound.
D	Correct	Specific, measurable, realistic, relevant, time-bound.

6. Answer C Concept 4 • transfer

A goal reads: “Reduce patient falls on 5 North by 30%.” Which SMART element is missing?

Target word: missing element **Decides:** No deadline.

A	Adjacent category	Nothing suggests 30% is unrealistic; the gap is the timeline.
B	Wrong stem number	The 30% target makes it measurable.
C	Correct	No date is given.
D	Confusion set	The unit and outcome are named.

7. Answer A Concept 5

A project team ~~at a hospital with a new helipad~~ plans to test hourly rounding to reduce call-light use. ~~The team leader recently earned a certification.~~ What must the team gather before starting?

Target word: pre-intervention step **Decides:** Change can only be shown against a baseline.

A	Correct	Without a baseline, improvement cannot be shown.
B	Absolute language	Local results still need measurement.
C	Dropped element	No comparison point.
D	Adjacent category	Useful, but not the outcome measure.

8. Answer D Concept 6

A capstone project on a unit ~~with a new manager~~ raised hand hygiene compliance from 72% to 94% in three months. The project lead leaves in a week. Which action best sustains the change?

Target word: sustainment **Decides:** The change must not depend on the departing lead.

A	Dropped element	Without monitoring, practice drifts back.
B	Absolute language	Gains decay without reinforcement.
C	Adjacent category	The lead is leaving; person-dependent changes fade.
D	Correct	Structures keep the change going.

9. Answer C Concept 7

A nurse introducing a new bedside glucose meter on a unit ~~with 60 staff and a recent Magnet designation~~ identifies nurses who are respected and try new things early. Which Rogers category are they, and why target them?

Target word: adopter category and reason **Decides:** Respected early users = opinion leaders.

A	Absolute language	Adoption spreads in stages.
B	Confusion set	Innovators take risks but are less connected to peers.
C	Correct	Their example spreads adoption.
D	Inverted operation	Laggards adopt last.

10. Answer C Concept 7 • transfer

In Rogers' diffusion of innovations, which group is most skeptical and adopts last?

Target word: last adopters **Decides:** Name the final group.

A	Confusion set	The first to adopt.
B	Adjacent category	Skeptical but adopt before laggards.
C	Correct	The last group to adopt.
D	Inverted operation	They adopt early.

11. Answer A Concept 8

A falls-prevention program on a unit ~~with 30 beds and a new mural~~ costs \$40,000 a year. It prevents falls that would have cost \$100,000. ~~The unit also won a staff award.~~ What is the ROI?

Target word: ROI **Decides:** $(100,000 - 40,000) \div 40,000$.

A	Correct	$\$60,000 \div \$40,000 = 1.5$.
B	Dropped element	Divides benefit by cost without subtracting cost.
C	Adjacent category	Net benefit in dollars, not a return ratio.
D	Inverted operation	Divides net benefit by benefit instead of cost.

12. Answer A Concept 8 • transfer

A program has an ROI of 200% and a net benefit of \$50,000. What did it cost?

Target word: solve for cost **Decides:** $\text{Cost} = \text{net benefit} \div \text{ROI}$.

A	Correct	$\$50,000 \div 2.0 = \$25,000$.
B	Inverted operation	Multiplies instead of dividing.
C	Adjacent category	That is the total benefit (net + cost).
D	Wrong stem number	The net benefit, not the cost.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	4	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	10	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	6	
Camouflage	Answers a stem fact that was never the question.	1	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Lewin's change theory	Unfreeze (create readiness, show the need) → change/move (implement) → refreeze (lock in with policy, training, audits).	Calling data-sharing before any change "refreezing," or skipping unfreezing.	What the leader is doing at this moment.
2	Kotter's first step	Kotter's eight steps begin with creating a sense of urgency, then building a guiding coalition.	Starting with a coalition, a plan, or celebrations.	"What is the first step?"
3	Managing resistance	Engage resisters early, seek their input, and address concerns; resistance often reveals real barriers.	Excluding or overriding resisters.	Staff openly oppose the change.
4	SMART goals	Specific, Measurable, Achievable, Relevant, Time-bound — a target number, a place, and a deadline.	Accepting activities or vague aims as goals.	Several goal statements to compare.
5	Baseline measurement	Collect baseline data before the intervention so change can be measured.	Measuring only after, or assuming proven methods need no measurement.	"Before starting, what must they gather?"
6	Sustaining change	Sustainment needs structures — policy, a unit champion, ongoing audit and feedback — not one person's effort.	Ending monitoring once goals are met.	The project lead is leaving.
7	Diffusion of innovations	Target early adopters — respected opinion leaders — to spread change to the majority; laggards adopt last.	Focusing on laggards or on innovators as the main influencers.	Respected staff who try new things early.
8	Return on investment	$ROI = (\text{benefit} - \text{cost}) \div \text{cost}$.	Dividing benefit by cost without subtracting, or reporting net dollars as ROI.	A program cost and a dollar benefit.

Course scope (public description): The BSNU capstone is a synthesis of previously acquired knowledge, skills, and attitudes and requires students to demonstrate competency in the program outcomes. Emphasis is placed on change facilitation in a healthcare setting, based in evidence and incorporating value-based care. This course provides students with an opportunity to engage in a project that is actionable, relevant, highly collaborative, and based on innovative thinking.
