Business of IT

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A payroll team at a manufacturing company with 2,400 employees says the new time-tracking service must be available 99.9% of the time during pay week and must keep employee data encrypted. The vendor's sales rep has won several industry awards. Which aspect of the service do these requirements describe?

- A. Warranty.
- B. Both, because every requirement is always both utility and warranty.
- C. Service request.
- D. Utility.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Which requirement describes the utility of an expense-reporting service?

- A. The service handles 5,000 users at once without slowing.
- B. The service has a signed contract with the vendor.
- C. Employees can photograph receipts and submit them for approval.
- D. The service recovers within four hours after a disaster.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

For the third Monday in a row, a regional bank's online banking site crashes at 8 a.m. The service desk, which was recently moved to a new building, restarts the server each time and service returns in ten minutes. What should happen next?

- A. Stop restoring service next Monday until the root cause is found.
- B. Log a problem so the underlying cause can be investigated, while incidents continue to be restored quickly.
- C. Keep restarting the server; the incident is resolved each time.
- D. Move the service desk back to its old building.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A known error has been documented for a printer driver fault, with a workaround. A user calls because printing has stopped. What is the service desk's goal on this call?

- A.** Close the call, since a known error means nothing can be done.
- B.** Find the root cause of the driver fault before helping.
- C.** Restore printing quickly, using the documented workaround.
- D.** Log a service request for a new printer.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A new nurse at a hospital that recently won a patient-safety award contacts the service desk to get access to the scheduling system for her unit. Nothing is broken, and the access type is on the standard catalog. How should this be handled?

- A.** As a service request.
- B.** As an incident.
- C.** As a normal change needing board approval.
- D.** As a problem.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

An IT team at an online retailer resets a user's multi-factor token using a documented, low-risk procedure that has been done hundreds of times without trouble. The retailer's peak season starts next month. Which change type fits?

- A.** Emergency change.
- B.** Normal change.
- C.** Incident.
- D.** Standard change.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

A critical security flaw is being actively used against a company's public site, and a patch must go in tonight. Which change type applies?

- A.** Emergency change, with expedited assessment and authorization.
- B.** Standard change.
- C.** No change record at all, since it is urgent.
- D.** Normal change on the next monthly board schedule.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A new CIO at a state university, who came from a large tech company, wants to scrap the current help-desk process and design a new one from scratch. An assessment shows the current process meets most service targets. Which guiding principle should shape the decision?

- A.** Always replace legacy processes when leadership changes.
- B.** Optimize and automate.
- C.** Start where you are.
- D.** Adopt the process from the CIO's last company.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A city government launches a new permit portal. The software works, but staff were never trained, the payment vendor contract was not updated, and the approval steps were not redesigned. The mayor announced the launch at a press event. Which idea does this failure most directly show?

- A.** The portal lacked utility.
- B.** Continual improvement model.
- C.** Only the information and technology dimension matters for a portal.
- D.** All four dimensions of service management must be considered, not just technology.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

An IT department reports that it delivered 1,200 new laptops this year, on budget and with a new asset-tagging system. The CFO asks what value this created for the business. Which measure best answers her?

- A. The number of assets tagged.
- B. The laptops' purchase cost.
- C. The count of 1,200 laptops delivered.
- D. The drop in time staff lose to slow or failing devices.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11. [TRANSFER — reversed stem / different variable]

A cloud storage service lets a design firm share large files with clients in minutes instead of shipping drives. Which of these is an outcome rather than an output?

- A. The provider sends a monthly usage report.
- B. The firm finishes client reviews days faster.
- C. The firm pays a monthly fee.
- D. A shared folder is created for each client.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A service provider for 40 dental offices holds quarterly meetings with office managers to understand their needs and keep good relationships. The meetings are held at a hotel near the airport. Which value chain activity is this?

- A. Design and transition.
- B. Engage.
- C. Deliver and support.
- D. Plan, because meetings always count as planning.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A payroll team at a manufacturing company ~~with 2,400 employees~~ says the new time-tracking service must be available 99.9% of the time during pay week and must keep employee data encrypted. ~~The vendor's sales rep has won several industry awards.~~ Which aspect of the service do these requirements describe?

Target word: classify the requirement **Decides:** Availability and security are how well it performs.

A	Correct	Availability and security are warranty — fit for use.
B	Absolute language	Some requirements are clearly one or the other; these are warranty.
C	Confusion set	A service request is a user ask, not a requirement type.
D	Inverted operation	Utility is the functions the service performs, such as recording hours.

2. Answer C Concept 1 • transfer

Which requirement describes the utility of an expense-reporting service?

Target word: pick the utility requirement **Decides:** Utility = what the service does.

A	Inverted operation	Capacity is warranty.
B	Confusion set	A supplier arrangement, not a service function.
C	Correct	A function the service performs.
D	Adjacent category	Continuity is warranty.

3. Answer B Concept 2

For the third Monday in a row, a regional bank's online banking site crashes at 8 a.m. The service desk, ~~which was recently moved to a new building,~~ restarts the server each time and service returns in ten minutes. What should happen next?

Target word: which practice acts on the repeating pattern **Decides:** The same incident keeps recurring; the cause is unknown.

A	Inverted operation	Incident management restores service first; investigation runs alongside.
B	Correct	Problem management handles the cause behind repeat incidents.
C	Dropped element	Drops the pattern that calls for problem management.
D	Camouflage	The desk's location does not cause the crash.

4. Answer C Concept 2 • transfer

A known error has been documented for a printer driver fault, with a workaround. A user calls because printing has stopped. What is the service desk's goal on this call?

Target word: goal of incident handling **Decides:** The user's printing is interrupted now.

A	Absolute language	A workaround exists precisely so service can be restored.
B	Inverted operation	That is problem management's job and delays the user.
C	Correct	Incident management restores service; the known error record speeds it up.
D	Confusion set	This is an interruption, not a standard request.

5. Answer A Concept 3

A new nurse at a hospital ~~that recently won a patient safety award~~ contacts the service desk to get access to the scheduling system for her unit. Nothing is broken, and the access type is on the standard catalog. How should this be handled?

Target word: classify the contact **Decides:** Nothing is broken, and the ask is pre-defined in the catalog.

A	Correct	A normal, pre-defined user ask for access.
B	Confusion set	Nothing is interrupted or degraded.
C	Inverted operation	Catalog access is pre-approved and handled as a request.
D	Adjacent category	Problems are causes of incidents.

6. Answer D Concept 4

An IT team at an online retailer resets a user's multi-factor token using a documented, low-risk procedure that has been done hundreds of times without trouble. ~~The retailer's peak season starts next month.~~ Which change type fits?

Target word: change type **Decides:** Low-risk, repeatable, documented, pre-authorized procedure.

A	Camouflage	An upcoming busy season does not make a routine task an emergency.
B	Adjacent category	Normal changes need individual assessment and authorization.
C	Confusion set	An incident is an interruption, not a change type.
D	Correct	Pre-authorized, low-risk, well understood.

7. Answer A Concept 4 · transfer

A critical security flaw is being actively used against a company's public site, and a patch must go in tonight. Which change type applies?

Target word: change type for urgent fix **Decides:** Must be implemented as soon as possible to resolve an urgent risk.

A	Correct	Emergency changes are fast-tracked but still authorized.
B	Inverted operation	This is not a routine, pre-approved procedure.
C	Absolute language	Emergency changes still get recorded and authorized.
D	Adjacent category	Too slow for an active threat.

8. Answer C Concept 5

A new CIO at a state university, ~~who came from a large tech company,~~ wants to scrap the current help-desk process and design a new one from scratch. An assessment shows the current process meets most service targets. Which guiding principle should shape the decision?

Target word: principle about existing practices **Decides:** The current process already works well in most areas.

A	Absolute language	No principle calls for replacement by default.
B	Confusion set	Automating comes after the process is understood and sound.
C	Correct	Assess and reuse what works before replacing it.
D	Camouflage	Her background does not decide which principle applies.

9. Answer D Concept 6

A city government launches a new permit portal. The software works, but staff were never trained, the payment vendor contract was not updated, and the approval steps were not redesigned. ~~The mayor announced the launch at a press event.~~ Which idea does this failure most directly show?

Target word: what framework element was ignored **Decides:** People, suppliers, and processes were all ignored; only technology was handled.

A	Inverted operation	The software worked; the gap was elsewhere.
B	Adjacent category	A method for improvement, not the lens that explains what was missed.
C	Dropped element	Drops the three dimensions that caused the failure.
D	Correct	People, partners, and value streams were missed.

10. Answer D Concept 7

An IT department reports that it delivered 1,200 new laptops this year, ~~on budget and with a new asset tagging system.~~ The CFO asks what value this created for the business. Which measure best answers her?

Target word: outcome measure **Decides:** Value is shown by outcomes, not deliverables.

A	Camouflage	Another output tied to the tagging detail.
B	Adjacent category	A cost, not value delivered.
C	Wrong stem number	An output, not an outcome.
D	Correct	An outcome the consumer achieves.

11. Answer B Concept 7 • transfer

A cloud storage service lets a design firm share large files with clients in minutes instead of shipping drives. Which of these is an outcome rather than an output?

Target word: pick the outcome **Decides:** Outcome = the result the consumer achieves.

A	Confusion set	An output of the provider.
B	Correct	A result the consumer is enabled to achieve.
C	Adjacent category	A cost, not an outcome.
D	Inverted operation	A deliverable produced — an output.

12. Answer B Concept 8

A service provider for 40 dental offices holds quarterly meetings with office managers to understand their needs and keep good relationships. ~~The meetings are held at a hotel near the airport.~~ Which value chain activity is this?

Target word: value chain activity **Decides:** Understanding stakeholder needs and maintaining relationships.

A	Confusion set	That covers building and moving services into use.
B	Correct	Engage covers understanding needs and relationships with stakeholders.
C	Adjacent category	That covers running the service and resolving issues.
D	Absolute language	The purpose, not the meeting format, decides the activity.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	2	
Wrong stem number	A figure copied from the prompt that is not the answer.	1	
Adjacent category	The right idea in the wrong bucket.	8	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	8	
Camouflage	Answers a stem fact that was never the question.	4	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Utility vs. warranty	Utility is what the service does (fit for purpose); warranty is how well it performs — availability, capacity, security, continuity (fit for use).	Calling uptime or security a feature (utility).	A requirement about availability, capacity, or security vs. about functions.
2	Incident vs. problem	Incident management restores normal service fast; problem management finds and manages the underlying cause of one or more incidents.	Holding up service restoration to find the root cause.	Repeated outages with the same symptom, or a demand to fix it now.
3	Service request vs. incident	A service request is a normal, pre-defined user ask (access, info, standard item); an incident is an unplanned interruption or quality drop.	Logging a password reset or new laptop request as an incident.	Whether anything is broken or degraded.
4	Change types	Standard changes are low-risk and pre-authorized; normal changes need assessment and authorization; emergency changes are expedited to fix urgent issues.	Treating every urgent-sounding change as emergency, or every routine one as needing full CAB review.	Whether the change is a pre-approved, repeatable procedure.
5	Guiding principles	Seven principles guide decisions: focus on value; start where you are; progress iteratively with feedback; collaborate and promote visibility; think and work holistically; keep it simple and practical; optimize and automate.	Scrapping existing processes and rebuilding from zero.	A team about to discard what already works, or to automate a broken process.
6	Four dimensions of service management	Organizations and people; information and technology; partners and suppliers; value streams and processes — all four must be considered.	Treating a service as only a technology project.	A rollout that ignores skills, vendors, or workflow.
7	Outputs vs. outcomes and value co-creation	An output is a deliverable; an outcome is the result the consumer is enabled to achieve. Value is co-created with the consumer.	Counting deliverables as proof of value.	A metric that counts things produced vs. results for the user.
8	Service value chain	Six activities — plan, improve, engage, design and transition, obtain/build, deliver and support — combine into value streams in any order.	Thinking the chain is a fixed linear sequence.	Asked which activity covers a specific piece of work.

Course scope (public description): Applications - Business of IT - Applications examines Information Technology Infrastructure Library (ITIL®) terminology, structure, policies, and concepts. Focusing on the management of information technology (IT) infrastructure, development, and operations, learners will explore the core principles of ITIL practices for service management to prepare them for careers as IT professionals, business

managers, and business process owners. This course has no prerequisites.
