Digital Transformation in the Enterprise

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A 60-year-old insurance firm, headquartered in a historic downtown building, spent \$200,000 on scanners to convert its paper claim forms to PDF files on a shared drive. Claims are still routed and approved exactly as before. What best describes this project?

- A. Digitization.
- B. Transformation, because any \$200,000 technology project qualifies.
- C. Digitalization.
- D. Digital transformation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Which initiative is the clearest example of digital transformation?

- A. A finance team automates one invoice-approval workflow.
- B. An office scans paper files into PDFs.
- C. A machine maker uses sensor data to sell guaranteed uptime as a subscription instead of selling machines.
- D. A company upgrades all employee laptops.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

The CEO of a regional shipping company recently attended a technology conference in Las Vegas and wants to use blockchain. Meanwhile, customers complain that delivery estimates are wrong about 30% of the time. What should the transformation lead do first?

- A. Adopt whatever technology the leading competitor uses.
- B. Replace every legacy system so no old technology remains.
- C. Launch a blockchain pilot, since the CEO supports it.
- D. Define the delivery-estimate problem and a target outcome, then evaluate technologies against it.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A team compares two CRM systems on a 1–5 scale. Weights: cost 50%, usability 30%, integration 20%. System A scores 2, 5, 5. System B scores 5, 3, 3. Vendor A's sales rep sent a detailed demo video. Which system should the team pick?

- A. System B, 4.0 vs. 3.5.
- B. System A, because 3.5 beats 4.0 when lower is better.
- C. System A, because of its strong demo.
- D. System A, 12 vs. 11.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

5. [TRANSFER — reversed stem / different variable]

Weights are cost 50%, usability 30%, integration 20%. System C scores 4 on cost and 4 on usability. What integration score does it need for a weighted total of 4.0?

- A. 0.8
- B. 5, because only a perfect score can close any gap.
- C. 3.2
- D. 4

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

6.

Package A costs \$50,000 upfront plus \$10,000 a year in support. Service B is a subscription at \$18,000 a year with no upfront fee. Vendor A has been in business for 30 years. Over five years, which is cheaper and by how much?

- A. Service B, by \$32,000.
- B. Package A, by \$40,000.
- C. Package A, because the vendor is well established.
- D. Service B, by \$10,000.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

7. [TRANSFER — reversed stem / different variable]

Package A costs \$50,000 upfront plus \$10,000 a year. Service B costs \$18,000 a year with no upfront fee. After how many years are their total costs equal?

- A.** Never, because a subscription always costs more in the long run.
- B.** About 2.8 years
- C.** 6.25 years
- D.** About 1.8 years

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A hospital is rolling out a new records system that cost \$3 million. Training sessions led by the vendor's highly rated trainers are poorly attended, and nurses say they do not understand why the old system needs replacing. Using ADKAR, what should leaders address first?

- A.** Awareness — explain the reasons for the change.
- B.** Knowledge — schedule more training sessions.
- C.** Require use immediately and track who complies.
- D.** Book extra sessions with the highly rated vendor trainers.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

Staff understand why a new system was adopted and want it to succeed. After go-live, they still struggle to complete tasks in it. Which ADKAR stage needs attention?

- A.** Desire.
- B.** Ability — hands-on practice and coaching.
- C.** Reinforcement.
- D.** Awareness.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A retailer with 400 stores wants to add self-checkout but is unsure how it will affect theft and wait times. The board chair is enthusiastic, and two competitors launched it last year. What is the best rollout approach?

- A.** Install it in all 400 stores at once.
- B.** Pilot in a small set of representative stores, measure results, then scale.
- C.** Pilot only in the single best-performing store.
- D.** Launch everywhere now, since competitors already have it.

Target word _____	The one fact that decides _____	Answer ___	☐ sure ☐ unsure ☐ guess
-----------------------------	---	----------------------	---

11.

A consulting report the CFO shared says a new emerging technology is getting heavy media attention and vendor marketing, but there are very few proven deployments. Where does it most likely sit on the hype cycle?

- A.** Trough of disillusionment.
- B.** Peak of inflated expectations.
- C.** Innovation trigger.
- D.** Plateau of productivity.

Target word _____	The one fact that decides _____	Answer ___	☐ sure ☐ unsure ☐ guess
-----------------------------	---	----------------------	---

12.

A bank launched a customer-service chatbot to reduce call volume to its contact center. The chatbot was named through an employee contest and cost \$120,000. Which metric best shows whether the initiative succeeded?

- A.** Total number of chatbot conversations.
- B.** Staying under the \$120,000 budget.
- C.** Share of inquiries resolved by the chatbot without a call to an agent.
- D.** Number of chatbot features released.

Target word _____	The one fact that decides _____	Answer ___	☐ sure ☐ unsure ☐ guess
-----------------------------	---	----------------------	---

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A 60-year-old insurance firm, ~~headquartered in a historic downtown building, spent \$200,000 on scanners to~~ convert its paper claim forms to PDF files on a shared drive. Claims are still routed and approved exactly as before. What best describes this project?

Target word: label the initiative **Decides:** Analog became digital, but the process did not change.

A	Correct	It converts paper to digital files without changing the process.
B	Camouflage	Spending level does not decide the label.
C	Adjacent category	That would require using digital tools to improve the claims process itself.
D	Confusion set	Nothing about how the firm creates or delivers value changed.

2. Answer C Concept 1 • transfer

Which initiative is the clearest example of digital transformation?

Target word: pick the transformation — reverse of the labeling item **Decides:** The business model or value delivery changes.

A	Adjacent category	That improves one process (digitalization) without changing the business model.
B	Inverted operation	That is digitization, the earliest step.
C	Correct	Technology changes how the company creates and captures value.
D	Confusion set	A hardware refresh is routine IT, not transformation.

3. Answer D Concept 2

The CEO of a regional shipping company ~~recently attended a technology conference in Las Vegas and~~ wants to use blockchain. Meanwhile, customers complain that delivery estimates are wrong about 30% of the time. What should the transformation lead do first?

Target word: first step **Decides:** A real business problem exists; the technology has not been matched to it.

A	Adjacent category	Benchmarking can inform options but does not define this company's problem.
B	Absolute language	A sweeping replacement is not tied to the stated problem.
C	Camouflage	Executive enthusiasm does not show blockchain fits the problem.
D	Correct	Problem-first keeps technology tied to business value.

4. Answer A Concept 3

A team compares two CRM systems on a 1–5 scale. Weights: cost 50%, usability 30%, integration 20%. System A scores 2, 5, 5. System B scores 5, 3, 3. ~~Vendor A's sales rep sent a detailed demo video.~~ Which system should the team pick?

Target word: higher weighted score **Decides:** Weights: A = $1.0 + 1.5 + 1.0 = 3.5$; B = $2.5 + 0.9 + 0.6 = 4.0$.

A	Correct	Weighted totals favor B because cost carries half the weight.
B	Inverted operation	Higher scores mean better on this scale.
C	Camouflage	The demo is not a scored criterion.
D	Dropped element	Adds raw scores and ignores the weights.

5. Answer D Concept 3 • transfer

Weights are cost 50%, usability 30%, integration 20%. System C scores 4 on cost and 4 on usability. What integration score does it need for a weighted total of 4.0?

Target word: solve for a missing score **Decides:** Cost and usability give $2.0 + 1.2 = 3.2$; 0.8 more is needed at 20% weight.

A	Dropped element	The weighted points still needed, not the raw score.
B	Absolute language	A score of 4 is enough.
C	Wrong stem number	The subtotal from cost and usability.
D	Correct	$0.8 / 0.20 = 4$.

6. Answer D Concept 4

Package A costs \$50,000 upfront plus \$10,000 a year in support. Service B is a subscription at \$18,000 a year with no upfront fee. ~~Vendor A has been in business for 30 years.~~ Over five years, which is cheaper and by how much?

Target word: five-year TCO comparison **Decides:** $A = \$50,000 + 5 \times \$10,000 = \$100,000$; $B = 5 \times \$18,000 = \$90,000$.

A	Wrong stem number	Compares A's upfront price with one year of B.
B	Dropped element	Compares A's \$50,000 upfront price to B's \$90,000 and drops A's support.
C	Camouflage	Vendor age does not change the cost math.
D	Correct	$\$100,000 - \$90,000 = \$10,000$.

7. Answer C Concept 4 • transfer

Package A costs \$50,000 upfront plus \$10,000 a year. Service B costs \$18,000 a year with no upfront fee. After how many years are their total costs equal?

Target word: solve for break-even year **Decides:** B costs \$8,000 more per year; that gap must cover A's \$50,000 upfront.

A	Absolute language	B's higher yearly cost catches up to A's upfront fee after 6.25 years; before that B is cheaper.
B	Dropped element	$\$50,000 / \$18,000$ ignores A's yearly support.
C	Correct	$\$50,000 / (\$18,000 - \$10,000) = 6.25$.
D	Inverted operation	Adds the yearly costs (\$28,000) instead of subtracting them.

8. Answer A Concept 5

A hospital is rolling out a new records system that cost \$3 million. Training sessions ~~led by the vendor's highly rated trainers~~ are poorly attended, and nurses say they do not understand why the old system needs replacing. Using ADKAR, what should leaders address first?

Target word: earliest missing ADKAR stage **Decides:** Nurses do not see why the change is needed.

A	Correct	Awareness comes first; without it, desire and training do not take hold.
B	Adjacent category	Knowledge is a later stage; low attendance shows earlier stages are missing.
C	Inverted operation	Jumps to reinforcement before awareness and desire exist.
D	Camouflage	Trainer quality does not fix a missing reason to change.

9. Answer B Concept 5 · transfer

Staff understand why a new system was adopted and want it to succeed. After go-live, they still struggle to complete tasks in it. Which ADKAR stage needs attention?

Target word: later ADKAR stage **Decides:** Awareness and desire are present; performance is not.

A	Confusion set	The stem says staff want it to succeed.
B	Correct	Ability is turning knowledge into real performance on the job.
C	Adjacent category	Reinforcement sustains a change people can already perform.
D	Inverted operation	Staff already understand why.

10. Answer B Concept 6

A retailer with 400 stores wants to add self-checkout but is unsure how it will affect theft and wait times. ~~The board chair is enthusiastic, and two competitors launched it last year.~~ What is the best rollout approach?

Target word: rollout approach **Decides:** The effect is uncertain.

A	Inverted operation	Commits fully before learning anything.
B	Correct	A pilot tests the uncertain effects before a large commitment.
C	Dropped element	Drops representativeness; one top store may not predict the rest.
D	Camouflage	Competitor moves do not settle the uncertainty.

11. Answer B Concept 7

~~A consulting report the CFO shared says~~ a new emerging technology is getting heavy media attention and vendor marketing, but there are very few proven deployments. Where does it most likely sit on the hype cycle?

Target word: hype-cycle stage **Decides:** Heavy buzz, few proven results.

A	Confusion set	The trough follows the peak, when interest fades after failures.
B	Correct	Attention outruns proven value at the peak.
C	Adjacent category	The trigger is the early breakthrough before heavy buzz.
D	Inverted operation	The plateau has broad, proven adoption.

12. Answer C Concept 8

A bank launched a customer-service chatbot to reduce call volume to its contact center. ~~The chatbot was named through an employee contest and~~ cost \$120,000. Which metric best shows whether the initiative succeeded?

Target word: outcome metric **Decides:** The goal is fewer calls to the contact center.

A	Dropped element	Counts use but drops whether the issue was resolved.
B	Camouflage	Budget status is project control, not business success.
C	Correct	Tracks the business result the chatbot was meant to change.
D	Adjacent category	An output measure, not an outcome.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	6	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	7	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	4	
Camouflage	Answers a stem fact that was never the question.	7	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Digitization vs. digitalization vs. transformation	Digitization converts analog to digital; digitalization uses digital tools to improve a process; digital transformation changes how the organization creates and delivers value.	Calling any large technology purchase a transformation.	Whether the process or business model actually changed.
2	Problem first, technology second	Start with a defined business problem and target outcome, then evaluate technologies against it.	Picking a trendy technology and looking for a use.	An executive excited about a named technology before the problem is defined.
3	Weighted scoring for technology selection	Multiply each criterion score by its weight and sum; the highest weighted total wins.	Adding raw scores and ignoring the weights.	Criteria with percentage weights and 1–5 scores.
4	Total cost of ownership	Compare all costs over the same time span — purchase, subscription, support, and upkeep — not just the sticker price.	Comparing one option's upfront price to another's annual fee.	Upfront costs mixed with recurring costs.
5	Change management (ADKAR)	People move through Awareness, Desire, Knowledge, Ability, and Reinforcement in order; fix the earliest missing stage first.	Adding more training when people do not yet see why the change matters.	Low attendance or quiet resistance vs. willing people who still struggle.
6	Pilot before scale	Test with a small, representative group, measure results, then scale.	Launching everywhere at once or piloting only in the best site.	Many locations and an uncertain effect.
7	Emerging-technology maturity (hype cycle)	Heavy buzz with few proven deployments signals the peak of inflated expectations; value becomes reliable only at the plateau of productivity.	Treating media attention as proof of maturity.	"Everyone is talking about it" but few results.
8	Measure outcomes, not activity	Success metrics should track the business result the initiative was meant to change.	Reporting features shipped, usage counts, or budget status as success.	The initiative's stated goal vs. a list of metrics.

Course scope (public description): Digital Transformation in the Enterprise provides an in-depth exploration of digital transformation within modern organizations. Students will evaluate emerging technologies and their potential to drive organizational improvement, focusing on the strategic assessment and integration of technology to enhance business processes and performance. The course covers the latest trends in digital innovation, methods for assessing and selecting appropriate technology solutions, and strategies for implementing digital transformation initiatives. By the end of the course, students will be equipped with the skills necessary to analyze business needs, propose technology solutions, and effectively manage the change associated with digital transformation. This course is designed for students who aspire to lead or contribute to digital transformation efforts in their organizations, ensuring they are prepared to leverage technology to create a competitive advantage in the rapidly evolving business landscape. There are no prerequisites for this course.
