E-Commerce and Marketing Analytics

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A Shopify candle store had \$18,000 in revenue from 450 orders and 12,000 sessions in May, the month it launched a lavender scent. What was its average order value?

- A. \$40
- B. 3.75%
- C. \$0.025
- D. \$1.50

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A store wants \$50,000 in monthly revenue, and its average order value is \$80. How many orders does it need?

- A. 80
- B. 0.0016
- C. 625
- D. 4,000,000

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

An online tea shop, whose best seller is jasmine green, had 25,000 sessions from 18,000 users and 500 orders last month. What is its e-commerce conversion rate per session?

- A. 72%
- B. 2.78%
- C. 50
- D. 2%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A store expects 40,000 sessions next month and wants 1,000 orders. Its current conversion rate is 2%. What conversion rate does it need?

- A. 40%
- B. 0.5%
- C. 2%
- D. 2.5%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A sneaker store that offers free returns saw 2,000 carts created and 600 completed purchases last week. What was its cart abandonment rate?

- A. 70%
- B. 1,400
- C. It cannot be known without the return rate.
- D. 30%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

A store's cart abandonment rate is 75%, and it completed 800 purchases. How many carts were created?

- A. 3,200
- B. 1,067
- C. 800
- D. 600

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A florist that is also active on Instagram wants its search ads to show for searches like "wedding flowers Austin" but not for unrelated searches like "wedding cake," and never for searches containing "free." Which setup fits?

- A. Add "free" as a regular keyword.
- B. Phrase match on "wedding flowers" plus "free" as a negative keyword.
- C. Broad match on "wedding" only.
- D. Exact match on "wedding flowers" only.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

Which match type gives the most control, showing ads only for searches with the same meaning as the keyword?

- A.** Negative match
- B.** Exact match
- C.** Phrase match
- D.** Broad match

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A lawn-care company's ad reads "Organic Lawn Care," but clicks land on a generic homepage mostly about snow removal. Its Quality Score is low. Its maximum bid is \$3.00. Which fix most directly improves Quality Score?

- A.** Add dozens more keywords to the same ad group.
- B.** Quality Score depends only on CTR, so buy more clicks.
- C.** Send clicks to a landing page about organic lawn care that matches the ad.
- D.** Raise the maximum bid to \$6.00.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A Shopify jewelry store sees many shoppers drop off when they are forced to create an account at checkout. The owner designs every piece in her garage studio. What is the best fix?

- A.** Keep required accounts to grow the email list.
- B.** Enable guest checkout and express payment options.
- C.** Add more photos to each product page.
- D.** Add a story about the garage studio to checkout.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A logged-in shopper visits an online store three times in one week and views 12 pages in total. She bought a silver necklace on her last visit. Assuming analytics recognizes her each time, what is recorded?

- A.** 3 users, 3 sessions, 12 page views
- B.** 1 user, 12 sessions, 12 page views
- C.** 1 user, 3 sessions, 12 page views
- D.** 1 user, 1 session, 12 page views

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A home-goods store with 300 products tracks purchase values in its search ads. It wants to maximize sales revenue while getting about \$5 in sales for every \$1 of ad spend. Which bidding strategy fits?

- A.** Maximize clicks
- B.** Target CPA
- C.** Manual CPC, since automated bidding is always worse
- D.** Target ROAS of 500%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A Shopify candle store had \$18,000 in revenue from 450 orders and 12,000 sessions in May, ~~the month it launched a lavender scent~~. What was its average order value?

Target word: AOV **Decides:** Revenue / orders = \$18,000 / 450.

A	Correct	$\$18,000 / 450 = \40 .
B	Confusion set	450 / 12,000 is the conversion rate.
C	Inverted operation	450 / \$18,000 divides the wrong way.
D	Adjacent category	\$18,000 / 12,000 is revenue per session.

2. Answer C Concept 1 · transfer

A store wants \$50,000 in monthly revenue, and its average order value is \$80. How many orders does it need?

Target word: solve for orders **Decides:** Orders = revenue / AOV.

A	Wrong stem number	The AOV, not an order count.
B	Inverted operation	$\$80 / \$50,000$ divides the wrong way.
C	Correct	$\$50,000 / \$80 = 625$.
D	Inverted operation	Multiplies revenue by AOV.

3. Answer D Concept 2

An online tea shop, ~~whose best seller is jasmine green~~, had 25,000 sessions from 18,000 users and 500 orders last month. What is its e-commerce conversion rate per session?

Target word: conversion rate per session **Decides:** Orders / sessions = 500 / 25,000.

A	Confusion set	18,000 / 25,000 relates users to sessions, not orders.
B	Adjacent category	500 / 18,000 is per user, not per session.
C	Inverted operation	25,000 / 500 divides the wrong way.
D	Correct	$500 / 25,000 = 2\%$.

4. Answer D Concept 2 · transfer

A store expects 40,000 sessions next month and wants 1,000 orders. Its current conversion rate is 2%. What conversion rate does it need?

Target word: solve for required rate **Decides:** 1,000 / 40,000.

A	Inverted operation	40,000 / 1,000 divides the wrong way.
B	Adjacent category	The increase needed, not the required rate.
C	Wrong stem number	The current rate, which yields only 800 orders.
D	Correct	$1,000 / 40,000 = 2.5\%$.

5. Answer A Concept 3

A sneaker store that offers free returns saw 2,000 carts created and 600 completed purchases last week. What was its cart abandonment rate?

Target word: abandonment rate **Decides:** $1 - 600 / 2,000$.

A	Correct	$600 / 2,000 = 30\%$ completed; $1 - 30\% = 70\%$.
B	Dropped element	A count of abandoned carts; drops the rate.
C	Camouflage	Returns happen after purchase and do not affect abandonment.
D	Inverted operation	The completion rate, not abandonment.

6. Answer A Concept 3 • transfer

A store's cart abandonment rate is 75%, and it completed 800 purchases. How many carts were created?

Target word: solve for carts **Decides:** $800 = 25\%$ of carts.

A	Correct	$800 / 0.25 = 3,200$.
B	Confusion set	$800 / 0.75$ treats purchases as the abandoned share.
C	Wrong stem number	The purchases, not the carts.
D	Inverted operation	800×0.75 multiplies instead of dividing.

7. Answer B Concept 4

A florist that is also active on Instagram wants its search ads to show for searches like "wedding flowers Austin" but not for unrelated searches like "wedding cake," and never for searches containing "free." Which setup fits?

Target word: match-type setup **Decides:** Needs the phrase meaning, plus an exclusion.

A	Inverted operation	That targets "free" searches instead of blocking them.
B	Correct	Phrase match keeps the phrase meaning; the negative blocks "free."
C	Adjacent category	Broad match would show for wedding cake and other unrelated searches.
D	Confusion set	Too narrow for "wedding flowers Austin" and still does not block "free."

8. Answer B Concept 4 • transfer

Which match type gives the most control, showing ads only for searches with the same meaning as the keyword?

Target word: reverse: from behavior to match type **Decides:** Same meaning = narrowest match.

A	Adjacent category	Blocks searches rather than showing ads.
B	Correct	The narrowest, most controlled match type.
C	Confusion set	Allows extra words around the phrase meaning.
D	Inverted operation	The widest, least controlled match type.

9. Answer C Concept 5

A lawn-care company's ad reads "Organic Lawn Care," but clicks land on a generic homepage mostly about snow removal. Its Quality Score is low. ~~Its maximum bid is \$3.00.~~ Which fix most directly improves Quality Score?

Target word: QS fix **Decides:** Landing page does not match the ad or keyword.

A	Dropped element	Loosens relevance and leaves the landing page broken.
B	Absolute language	Relevance and landing page also count.
C	Correct	Improves landing-page experience and relevance.
D	Adjacent category	Bid affects Ad Rank, not Quality Score.

10. Answer B Concept 6

A Shopify jewelry store sees many shoppers drop off when they are forced to create an account at checkout. ~~The owner designs every piece in her garage studio.~~ What is the best fix?

Target word: checkout fix **Decides:** Drop-off at forced account creation.

A	Inverted operation	Keeps the friction that causes the loss.
B	Correct	Removes the step that blocks purchase.
C	Adjacent category	Product pages are not where shoppers drop off.
D	Camouflage	Answers the studio detail, not the friction.

11. Answer C Concept 7

A logged-in shopper visits an online store three times in one week and views 12 pages in total. ~~She bought a silver necklace on her last visit.~~ Assuming analytics recognizes her each time, what is recorded?

Target word: users, sessions, page views **Decides:** One recognized person, three visits, 12 pages.

A	Confusion set	Counts each visit as a new user.
B	Adjacent category	Treats each page view as a session.
C	Correct	Recognized person = 1 user; each visit = a session; each page load = a view.
D	Dropped element	Drops the separate visits.

12. Answer D Concept 8

A home-goods store ~~with 300 products~~ tracks purchase values in its search ads. It wants to maximize sales revenue while getting about \$5 in sales for every \$1 of ad spend. Which bidding strategy fits?

Target word: bid strategy **Decides:** Goal is revenue per ad dollar.

A	Adjacent category	Optimizes traffic, not sales value.
B	Confusion set	Optimizes cost per conversion and ignores order value.
C	Absolute language	Automated value bidding often does better with good conversion data.
D	Correct	$\$5 / \$1 = 500\%$ return on ad spend, optimized on conversion value.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	9	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	10	
Absolute language	Always, never, guarantee — where judgment applies.	2	
Confusion set	Every option is real; the test is exact role-matching.	7	
Camouflage	Answers a stem fact that was never the question.	2	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Average order value	$AOV = \text{revenue} / \text{number of orders}$.	Dividing revenue by sessions (revenue per session) or by visitors.	Revenue, orders, and sessions all given.
2	E-commerce conversion rate	Conversion rate = orders / sessions (or per user if the question says users).	Using the wrong base or dividing the wrong way.	Sessions, users, and orders in one stem.
3	Cart abandonment rate	Abandonment rate = $1 - (\text{completed purchases} / \text{carts created})$.	Reporting the completion rate or a raw count.	Carts created and purchases completed.
4	Keyword match types and negatives	Broad match reaches related searches; phrase match requires the meaning of the phrase; exact match the same meaning; negative keywords block terms.	Adding an unwanted term as a regular keyword, or using broad match when control is needed.	Searches the advertiser wants to include and exclude.
5	Quality Score drivers	Quality Score reflects expected CTR, ad relevance, and landing-page experience, not the bid.	Raising the bid to fix Quality Score.	Mismatch between keyword, ad, and landing page.
6	Checkout friction	Remove steps that block purchase (forced account creation, surprise costs); offer guest and express checkout.	Fixing product pages when the drop-off is at checkout.	Drop-off at a named checkout step.
7	Users, sessions, and page views	A user is one recognized person; a session is one visit; page views count every page loaded.	Counting each visit as a new user.	One person, several visits, many pages.
8	Smart bidding goals	Target ROAS optimizes for conversion value; Target CPA for cost per conversion; Maximize clicks for traffic.	Choosing Target CPA when the goal is revenue per dollar.	"Every \$1 of ad spend should return \$X in sales."

Course scope (public description): E-Commerce and Marketing Analytics teaches learners how to sell online, how to reach customers online, and how to measure campaign and website performance. Businesses and consumers actively engage in buying and selling products over the internet. Learners gain skills through the practical application of building and optimizing a Shopify website designed to promote and sell products to customers. The course explores the latest technology platforms with an emphasis on Google applications for hands-on experience. Learners have the opportunity to complete the Google Search Ads certification to gain skills used in practice and to enhance marketability within the marketing profession.
