Elementary Health and Physical Education Methods

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

In a second-grade PE class in a newly painted gym, students gallop from one end of the gym to the other. The class meets twice a week. Which type of skill is galloping?

- A. Manipulative.
- B. Skill-related fitness.
- C. Locomotor.
- D. Nonlocomotor.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A teacher wants a lesson focused on manipulative skills. Which activity fits?

- A. Stretching the hamstrings.
- B. Dribbling a ball with the hands around cones.
- C. Balancing on one foot while twisting.
- D. Skipping around the gym.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A PE teacher with 28 third graders plans to play a popular dodgeball game in which students who are hit sit on the side until one player is left. The school has a new climbing wall. What is the main problem from a best-practice view?

- A. The class is too small for dodgeball.
- B. Elimination means many students, often the least skilled, spend most of the game sitting.
- C. Games are never appropriate in PE.
- D. It should be replaced with the climbing wall for all 28 at once.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A fourth grader who plays the piano gets 25 minutes of moderate-to-vigorous activity in PE, 20 minutes at recess, and 10 minutes walking briskly to school. His favorite sport to watch is baseball. How many more minutes does he need to meet the daily guideline?

- A. 30 minutes
- B. 0 minutes
- C. 35 minutes
- D. 5 minutes

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

A school wants students to get half of the daily recommended activity during the school day. How many minutes should it plan?

- A. 30 minutes
- B. 60 minutes
- C. 120 minutes
- D. 150 minutes

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

A fifth-grade class with a new set of jump ropes has been jumping rope 3 days a week for 5 minutes. The teacher, who ran a marathon last year, increases each session to 8 minutes. Which FITT element changed?

- A. Frequency.
- B. Intensity.
- C. Time.
- D. Type.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

A teacher wants to raise intensity while keeping frequency, time, and type the same. Which change does that?

- A.** Switch from walking laps to jogging laps for the same 10 minutes.
- B.** Swap laps for swimming.
- C.** Add a fourth day each week.
- D.** Walk laps for 15 minutes instead of 10.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A PE teacher at a school with a new outdoor track tests students on a shuttle run where they sprint and change direction quickly. Results will be shared at a family fitness night. Which fitness component does the shuttle run mainly measure?

- A.** Cardiorespiratory endurance.
- B.** Flexibility.
- C.** Agility, a health-related component.
- D.** Agility, a skill-related component.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

Which activity best measures a health-related fitness component?

- A.** A balance beam walk.
- B.** A reaction-time drop test.
- C.** A 40-yard sprint for speed.
- D.** A curl-up test for muscular endurance.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A second-grade PE teacher who recently earned an award is grading the overhand throw. One student always wears proper gym shoes and never misses class but does not step with the opposite foot or rotate the hips. Which grading approach fits best practice?

- A.** Grade by how far the ball traveled only.
- B.** Give no grade, since PE should never be assessed.
- C.** Score the throw against its critical elements, noting she needs work on opposite-foot step and hip rotation.
- D.** Give full marks for wearing gym shoes and attending.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A third grader who uses a wheelchair joins a class playing a tag game on a large field. The class meets right after lunch and has 24 students. What is the best adaptation?

- A.** Move the game to the paved court and have taggers use pool noodles to extend reach, so the student takes part as a tagger or runner.
- B.** Make the student the scorekeeper.
- C.** Have the student sit out tag games.
- D.** Split the 24 students into two groups of 12.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A fourth-grade teacher in a school that recently won a wellness grant is planning a health lesson on handling peer pressure to try vaping. The grant funded new posters. Which plan best reflects skills-based health education?

- A.** Show a frightening video, since fear always changes behavior.
- B.** Model refusal steps, then have students role-play saying no in realistic scenarios and give feedback.
- C.** Have students read a fact sheet on vaping chemicals and take a quiz.
- D.** Hang the new posters in the hallway.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

In a second-grade PE class ~~in a newly painted gym~~, students gallop from one end of the gym to the other. ~~The class meets twice a week.~~ Which type of skill is galloping?

Target word: classify the skill **Decides:** It moves the body from place to place.

A	Adjacent category	Manipulative skills control an object.
B	Inverted operation	A fitness component, not a movement category.
C	Correct	Galloping travels across space.
D	Confusion set	Nonlocomotor skills happen in place.

2. Answer B Concept 1 • transfer

A teacher wants a lesson focused on manipulative skills. Which activity fits?

Target word: choose by category — reverse of classifying **Decides:** Controlling an object.

A	Adjacent category	Flexibility work, not a movement-skill category.
B	Correct	Controls an object — manipulative.
C	Confusion set	Nonlocomotor.
D	Inverted operation	Locomotor.

3. Answer B Concept 2

A PE teacher with 28 third graders plans to play a popular dodgeball game in which students who are hit sit on the side until one player is left. ~~The school has a new climbing wall.~~ What is the main problem from a best-practice view?

Target word: problem with the game **Decides:** Elimination reduces activity, often for students who need it most.

A	Wrong stem number	28 students is plenty; group size is not the issue.
B	Correct	Quality PE maximizes activity time for everyone.
C	Absolute language	Well-designed games are central to PE.
D	Camouflage	Uses the wall; one wall for 28 creates long lines.

4. Answer D Concept 3

A fourth grader ~~who plays the piano~~ gets 25 minutes of moderate-to-vigorous activity in PE, 20 minutes at recess, and 10 minutes walking briskly to school. ~~His favorite sport to watch is baseball.~~ How many more minutes does he need to meet the daily guideline?

Target word: minutes still needed **Decides:** $25 + 20 + 10 = 55$; guideline is 60.

A	Wrong stem number	Uses 30 minutes, an adult-style figure, instead of 60 minutes for children.
B	Inverted operation	Assumes he is already over the guideline.
C	Dropped element	Counts only PE ($60 - 25$).
D	Correct	$60 - 55 = 5$.

5. Answer A Concept 3 • transfer

A school wants students to get half of the daily recommended activity during the school day. How many minutes should it plan?

Target word: solve for school-day minutes **Decides:** Half of 60 minutes.

A	Correct	$60 \div 2 = 30$.
B	Dropped element	The full guideline; drops “half.”
C	Inverted operation	Doubles instead of halving.
D	Confusion set	The weekly adult guideline, not the children’s daily one.

6. Answer C Concept 4

A fifth-grade class ~~with a new set of jump ropes~~ has been jumping rope 3 days a week for 5 minutes. The teacher, ~~who ran a marathon last year~~, increases each session to 8 minutes. Which FITT element changed?

Target word: which FITT element **Decides:** Session length went from 5 to 8 minutes.

A	Confusion set	Still 3 days a week.
B	Adjacent category	How hard they jump did not change.
C	Correct	Duration of each session increased.
D	Inverted operation	Still jumping rope.

7. Answer A Concept 4 • transfer

A teacher wants to raise intensity while keeping frequency, time, and type the same. Which change does that?

Target word: choose the intensity change **Decides:** How hard the work is.

A	Correct	Same time, frequency, and activity type (laps), but harder.
B	Adjacent category	Type.
C	Confusion set	Frequency.
D	Inverted operation	Time.

8. Answer D Concept 5

A PE teacher ~~at a school with a new outdoor track~~ tests students on a shuttle run where they sprint and change direction quickly. ~~Results will be shared at a family fitness night.~~ Which fitness component does the shuttle run mainly measure?

Target word: classify the component **Decides:** Changing direction quickly = agility.

A	Adjacent category	Measured by longer efforts like a mile run or PACER.
B	Inverted operation	Range of motion, measured by sit-and-reach.
C	Confusion set	Right component, wrong category.
D	Correct	Quick changes of direction measure agility.

9. Answer D Concept 5 · transfer

Which activity best measures a health-related fitness component?

Target word: pick the health-related test **Decides:** Cardio, strength, endurance, flexibility, body composition.

A	Adjacent category	Balance is skill-related.
B	Confusion set	Reaction time is skill-related.
C	Inverted operation	Speed is skill-related.
D	Correct	Muscular endurance is health-related.

10. Answer C Concept 6

A second-grade PE teacher ~~who recently earned an award~~ is grading the overhand throw. One student always wears proper gym shoes and never misses class but does not step with the opposite foot or rotate the hips. Which grading approach fits best practice?

Target word: what to assess **Decides:** Assess the critical elements of the skill.

A	Dropped element	Drops form; distance alone misses the critical elements.
B	Absolute language	Assessment guides PE instruction.
C	Correct	Skill grades should reflect the skill.
D	Adjacent category	Attire and attendance are not the skill.

11. Answer A Concept 7

A third grader who uses a wheelchair joins a class playing a tag game on a large field. ~~The class meets right after lunch and has 24 students.~~ What is the best adaptation?

Target word: inclusive adaptation **Decides:** Modify space, task, equipment, or people so the student plays the same game.

A	Correct	Changes space and equipment for real participation.
B	Dropped element	Drops participation in the activity.
C	Absolute language	Excludes rather than adapts.
D	Wrong stem number	Group size alone does not remove the barrier.

12. Answer B Concept 8

A fourth-grade teacher ~~in a school that recently won a wellness grant~~ is planning a health lesson on handling peer pressure to try vaping. ~~The grant funded new posters.~~ Which plan best reflects skills-based health education?

Target word: skills-based lesson **Decides:** Students practice a skill, such as refusal.

A	Absolute language	Scare tactics alone do not reliably change behavior.
B	Correct	Builds and practices the refusal skill.
C	Dropped element	Knowledge only; drops the skill practice.
D	Camouflage	Uses the grant detail; posters are not skill practice.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	5	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	4	
Confusion set	Every option is real; the test is exact role-matching.	7	
Camouflage	Answers a stem fact that was never the question.	2	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Fundamental movement categories	Locomotor skills move the body from place to place (run, hop, skip); nonlocomotor skills move in place (bend, twist, balance); manipulative skills control an object (throw, catch, kick).	Classifying a skill by the game it appears in instead of what the body does.	“Which type of skill is...?”
2	Maximize activity time	Quality PE keeps all students moving most of the lesson; avoid elimination games, long lines, and one-ball-for-many setups.	Choosing a popular game where the least-skilled students sit out first.	A game where players get “out,” or many students waiting.
3	60 minutes of daily activity	Children and adolescents should get at least 60 minutes of moderate-to-vigorous physical activity each day, across PE, recess, and other settings.	Thinking a single PE class meets the daily need.	Minutes of activity to be added up against the guideline.
4	The FITT principle	Adjust Frequency (how often), Intensity (how hard), Time (how long), and Type (what activity) to plan or progress activity.	Mixing up intensity and time.	A change to a fitness plan that must be labeled.
5	Health-related vs. skill-related fitness	Health-related fitness is cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, and body composition; skill-related fitness is agility, balance, coordination, power, reaction time, and speed.	Calling agility or speed health-related.	A fitness test or activity to classify.
6	Assessing motor skills by critical elements	Assess PE learning against the critical elements of a skill (e.g., step with opposite foot, follow through), not dressing out, effort alone, or game wins.	Grading participation or attire as the skill grade.	A rubric or checklist for a skill such as the overhand throw.
7	Adapting for inclusion	Modify Space, Task, Equipment, or People (STEP) so every student can participate meaningfully in the same activity.	Making a student with a disability the scorekeeper or sitting them out.	A student who cannot do the activity as planned.
8	Skills-based health education	Effective health education builds skills — decision-making, refusal, communication, goal-setting — through practice, not facts alone.	Teaching only facts and assuming behavior follows.	A health lesson plan whose only activity is a fact sheet.

Course scope (public description): Elementary Health and Physical Education Methods is a course designed to provide educators with the knowledge and techniques to deliver effective and comprehensive health and physical

education (PE) experiences in elementary schools. This course covers a spectrum of topics, from fundamental movement skills to the promotion of lifelong health and wellness habits among young learners. Students engage with current pedagogical approaches that emphasize the integration of health and physical education across various subjects. The curriculum aims to address the needs of all students, fostering an inclusive environment that supports physical, mental, emotional, and social health. Future educators also learn how to assess student progress in physical education and incorporate technology to enhance learning experiences. By the end of this course, participants are prepared to inspire and motivate elementary students to lead active, healthy lifestyles and to implement a health and PE curriculum.
