Elementary Health and Physical Education Methods

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

In a first-grade PE class held in a gym with brand-new scoreboard lights, children dribble a ball with their hands while walking in a line. The class has 22 students. Which skill category is the teacher mainly working on?

- A. Nonlocomotor
- B. Skill-related fitness
- C. Manipulative
- D. Locomotor

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A teacher wants a warm-up made only of locomotor skills. Which set fits?

- A. Gallop, skip, hop, slide
- B. Any skill using the legs
- C. Bend, twist, stretch, balance
- D. Throw, catch, kick, strike

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A fifth grader who wears a new heart-rate monitor walks one mile three days a week. The teacher wants to raise only the intensity of her plan. She lives near a park with a paved trail. Which change does that?

- A. Jog the mile instead of walking it.
- B. Walk the mile five days a week.
- C. Switch to swimming.
- D. Walk two miles instead of one.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A student's plan changes from 20 minutes of biking to 35 minutes of biking at the same pace, same days. Which FITT element changed?

- A.** Intensity
- B.** Time
- C.** Frequency
- D.** Type

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

On a school day, a 9-year-old who loves art gets 25 minutes of moderate-to-vigorous activity in PE and 20 minutes at recess. The school has a new playground. How many more minutes of moderate-to-vigorous activity does the child need that day to meet the guideline?

- A.** 35 minutes
- B.** 105 minutes
- C.** 15 minutes
- D.** 0 minutes, because PE covers it.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

A child logs 300 minutes of moderate-to-vigorous activity across a full week. How far short of the guideline is the child?

- A.** 0 minutes; 300 is more than enough.
- B.** 120 minutes
- C.** 60 minutes
- D.** 240 minutes

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A fourth-grade class does a shuttle run, changing direction quickly between cones, during a unit that ends with a family fun night. The cones are orange. Which fitness component does this mainly measure?

- A. Cardiorespiratory endurance
- B. Flexibility
- C. Agility, a health-related component
- D. Agility, a skill-related component

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A PE teacher who coaches the middle-school team runs a dodgeball game in which players who are hit sit out. The gym was recently painted. Within five minutes, most of the class is sitting. What is the best change?

- A. Make the game shorter.
- B. Switch to small-sided games with no elimination so everyone keeps moving.
- C. Let the eliminated students keep score.
- D. Remove all competitive games, since competition is always harmful.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

In a 30-minute PE class, students are moving at moderate-to-vigorous levels for 12 minutes. Is the class meeting the at-least-half target?

- A. It cannot be judged without heart-rate monitors.
- B. Yes; 12 minutes is more than 10.
- C. No; 40% is below the 50% target.
- D. Yes; 60% of the class time is active.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A third grader who uses a walker is in a class playing a tag game on a large field. He is known for his great sense of humor. Which adaptation best includes him?

- A.** Have him do a separate activity alone.
- B.** Make him the permanent scorekeeper.
- C.** Make him the class comedian during the game.
- D.** Shrink the playing area and have taggers use pool noodles to extend their reach.

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

11.

A PE teacher is assessing the overhand throw in a class that is wearing new school T-shirts. One student throws the ball the farthest but steps with the same-side foot and does not rotate her hips. What is the best assessment decision?

- A.** Mark the step and hip rotation as not yet met and give cue-based feedback.
- B.** Grade on whether she wore the class T-shirt.
- C.** Give full marks because she threw the farthest.
- D.** Fail her, since any missing element means the skill is failed.

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

12.

A fifth-grade teacher is planning a lesson on saying no to vaping. The school nurse has a new office. Which plan best reflects skills-based health education?

- A.** Show graphic images of damaged lungs.
- B.** Have students copy facts about nicotine.
- C.** Invite students to visit the nurse's new office.
- D.** Model refusal steps, then have students role-play saying no in realistic scenes and give feedback.

Target word _____	The one fact that decides _____	Answer ___	[] sure [] unsure [] guess
-----------------------------	---	----------------------	----------------------------------

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

In a first-grade PE class ~~held in a gym with brand new scoreboard lights~~, children dribble a ball with their hands while walking in a line. ~~The class has 22 students.~~ Which skill category is the teacher mainly working on?

Target word: classify the skill **Decides:** Controlling an object is manipulative.

A	Adjacent category	Nonlocomotor skills happen in place without an object.
B	Dropped element	That is a fitness category, not a movement-skill category.
C	Correct	Dribbling controls an object.
D	Confusion set	Walking is locomotor, but the focus is controlling the ball.

2. Answer A Concept 1 • transfer

A teacher wants a warm-up made only of locomotor skills. Which set fits?

Target word: pick the locomotor set **Decides:** Locomotor skills travel.

A	Correct	All move the body from place to place.
B	Absolute language	Kicking uses legs but is manipulative.
C	Inverted operation	All nonlocomotor: they stay in place.
D	Confusion set	All manipulative.

3. Answer A Concept 2

A fifth grader ~~who wears a new heart rate monitor~~ walks one mile three days a week. The teacher wants to raise only the intensity of her plan. ~~She lives near a park with a paved trail.~~ Which change does that?

Target word: change intensity only **Decides:** Intensity = how hard.

A	Correct	Same distance and days, harder effort.
B	Confusion set	That changes frequency.
C	Dropped element	Changes type and may not raise intensity.
D	Adjacent category	That changes time, not intensity.

4. Answer B Concept 2 • transfer

A student's plan changes from 20 minutes of biking to 35 minutes of biking at the same pace, same days. Which FITT element changed?

Target word: identify the changed element **Decides:** Only duration changed.

A	Inverted operation	Pace stayed the same; longer is not harder per minute.
B	Correct	Longer duration, same pace and days.
C	Confusion set	Days did not change.
D	Wrong stem number	Biking stayed biking.

5. Answer C Concept 3

On a school day, a 9-year-old ~~who loves art~~ gets 25 minutes of moderate-to-vigorous activity in PE and 20 minutes at recess. ~~The school has a new playground.~~ How many more minutes of moderate-to-vigorous activity does the child need that day to meet the guideline?

Target word: remaining minutes **Decides:** $60 - (25 + 20)$.

A	Wrong stem number	$60 - 25$ ignores recess.
B	Inverted operation	Adds instead of subtracting.
C	Correct	$60 - 45 = 15$.
D	Dropped element	Counts only a part and ignores the 60-minute target.

6. Answer B Concept 3 • transfer

A child logs 300 minutes of moderate-to-vigorous activity across a full week. How far short of the guideline is the child?

Target word: weekly gap **Decides:** Guideline = $60 \times 7 = 420$ minutes a week.

A	Adjacent category	Uses the adult 150–300 minute weekly target.
B	Correct	$420 - 300 = 120$.
C	Wrong stem number	The daily target, not the weekly gap.
D	Inverted operation	Subtracts 60 from 300 instead of comparing to 420.

7. Answer D Concept 4

A fourth-grade class does a shuttle run, changing direction quickly between cones, ~~during a unit that ends with a family fun night. The cones are orange.~~ Which fitness component does this mainly measure?

Target word: classify the component **Decides:** Quick changes of direction = agility.

A	Confusion set	A short shuttle run does not test sustained aerobic work.
B	Dropped element	Nothing in the task measures range of motion.
C	Adjacent category	Right component, wrong category.
D	Correct	Agility is changing direction quickly; it is skill-related.

8. Answer B Concept 5

A PE teacher ~~who coaches the middle-school team~~ runs a dodgeball game in which players who are hit sit out. ~~The gym was recently painted.~~ Within five minutes, most of the class is sitting. What is the best change?

Target word: best change **Decides:** Elimination cuts activity time.

A	Dropped element	Still leaves players sitting.
B	Correct	Keeps most students active most of the time.
C	Adjacent category	Gives a job but still no activity.
D	Absolute language	Competition can be fine; elimination is the problem.

9. Answer C Concept 5 · transfer

In a 30-minute PE class, students are moving at moderate-to-vigorous levels for 12 minutes. Is the class meeting the at-least-half target?

Target word: compute the percent **Decides:** $12 \div 30 = 40\%$.

A	Absolute language	Observation tools like SOFIT can estimate activity time.
B	Wrong stem number	Uses an unrelated threshold.
C	Correct	$12 \div 30 = 0.40$.
D	Inverted operation	18 of 30 minutes (60%) is the inactive time.

10. Answer D Concept 6

A third grader who uses a walker is in a class playing a tag game on a large field. ~~He is known for his great sense of humor.~~ Which adaptation best includes him?

Target word: best adaptation **Decides:** Modify space, task, equipment, or people to keep him in the game.

A	Adjacent category	Separates rather than includes.
B	Dropped element	Drops his participation in the activity.
C	Camouflage	His humor does not decide the adaptation.
D	Correct	Space and equipment changes let him play the same game.

11. Answer A Concept 7

A PE teacher is assessing the overhand throw in a class ~~that is wearing new school T-shirts.~~ One student throws the ball the farthest but steps with the same-side foot and does not rotate her hips. What is the best assessment decision?

Target word: judge against critical elements **Decides:** Missing opposite-foot step and hip rotation.

A	Correct	Assessment is on critical elements, not distance.
B	Camouflage	Attire is not a motor-skill criterion.
C	Adjacent category	Grades outcome instead of form.
D	Absolute language	Skills develop in steps; feedback targets the next element.

12. Answer D Concept 8

A fifth-grade teacher is planning a lesson on saying no to vaping. ~~The school nurse has a new office.~~ Which plan best reflects skills-based health education?

Target word: best lesson plan **Decides:** Students practice a skill, such as refusal.

A	Adjacent category	Scare tactics do not build skills.
B	Dropped element	Facts without skill practice.
C	Camouflage	The office does not decide the lesson approach.
D	Correct	Practicing the skill is the core of skills-based health.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	7	
Wrong stem number	A figure copied from the prompt that is not the answer.	4	
Adjacent category	The right idea in the wrong bucket.	8	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	5	
Absolute language	Always, never, guarantee — where judgment applies.	4	
Confusion set	Every option is real; the test is exact role-matching.	5	
Camouflage	Answers a stem fact that was never the question.	3	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Locomotor, nonlocomotor, and manipulative skills	Locomotor skills move the body from place to place (run, hop, skip, gallop); nonlocomotor skills move in place (bend, twist, balance); manipulative skills control an object (throw, catch, kick, dribble).	Calling kicking locomotor because the legs move, or calling skipping nonlocomotor.	Does the body travel, stay put, or control an object?
2	The FITT principle	Change Frequency (how often), Intensity (how hard), Time (how long), or Type (what activity) to adjust a fitness plan.	Calling a longer workout “more intense.”	“More days,” “harder,” “longer,” “different activity.”
3	Physical activity guidelines for children	Children and teens (6–17) need 60 minutes or more of moderate-to-vigorous activity every day, including vigorous, muscle-strengthening, and bone-strengthening activity at least 3 days a week each.	Thinking a PE class alone meets the daily need, or that 60 minutes a week is enough.	Minutes of activity in a child’s day or week.
4	Health-related vs. skill-related fitness	Health-related: cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, body composition. Skill-related: agility, balance, coordination, power, reaction time, speed.	Putting agility or speed under health-related fitness.	A fitness test or activity to classify.
5	Maximize activity time	Aim for students to be moving at moderate-to-vigorous levels for at least half of PE time; use small-sided games, enough equipment, and no elimination.	Relay lines and elimination games that leave most children waiting.	Long lines, one ball, or players sitting out.
6	Adapting for inclusion (STEP)	Modify Space, Task, Equipment, or People so every student can take part in the same activity and goal.	Assigning a student with a disability to keep score or sit out.	A student who cannot do the activity as designed.
7	Assessing motor skills with critical elements	Assess skills against the critical elements (cues) of the movement, such as stepping with the opposite foot on an overhand throw, not by outcome alone or by effort and dress.	Grading on how far the ball went, or on attire and participation.	A PE grade or checklist.
8	Skills-based health education	Health education builds skills students practice (decision making, refusal, communication, goal setting, accessing help), not only facts.	Thinking a lesson full of facts or scare tactics changes behavior.	A health lesson on a risky behavior.

Course scope (public description): Elementary Health and Physical Education Methods is a course designed to provide educators with the knowledge and techniques to deliver effective and comprehensive health and physical education (PE) experiences in elementary schools. This course covers a spectrum of topics, from fundamental movement skills to the promotion of lifelong health and wellness habits among young learners. Students engage with current pedagogical approaches that emphasize the integration of health and physical education across various subjects. The curriculum aims to address the needs of all students, fostering an inclusive environment that supports physical, mental, emotional, and social health. Future educators also learn how to assess student progress in physical education and incorporate technology to enhance learning experiences. By the end of this course, participants are prepared to inspire and motivate elementary students to lead active, healthy lifestyles and to implement a health and PE curriculum.
