

D025

Essentials of Advanced Nursing Roles and Interprofessional Practice

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

On a rehab unit with a new therapy gym, nurses and physical therapists each assume the other is walking patients after lunch, and several patients are not walked. Both groups are highly skilled and well staffed. Which IPEC domain is most at issue?

- A. Teams and teamwork, because teams always fail without a leader.
- B. Values and ethics.
- C. Clinical skill, since training fixes most team problems.
- D. Roles and responsibilities.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

A nurse calls a provider at 0300 about a post-op patient who had knee surgery at a well-known orthopedic center. She describes the surgery, the patient's history, vital signs, and her concern that the patient may be bleeding, then pauses. What part of SBAR is missing?

- A. Recommendation: a specific request, such as asking the provider to come assess or order labs.
- B. Situation: she should state the surgery center first.
- C. Background: she should repeat the history.
- D. Assessment: she needs to add her concern.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3. [TRANSFER — reversed stem / different variable]

A nurse says, "I think the patient is developing sepsis." Which SBAR element is this?

- A. Situation.
- B. Assessment.
- C. Background.
- D. Recommendation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A county health department serving 20,000 residents, all free of the disease on January 1, records 200 new cases of a condition during the year. The county's largest employer is a food plant. What is the annual incidence?

- A. 100 per 1,000 per year
- B. 1 per 1,000 per year
- C. 10 per 1,000 per year
- D. 200 per year

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

A survey on June 1 finds 1,500 people currently living with diabetes in a town of 20,000. What does 7.5% describe?

- A. Relative risk.
- B. Incidence.
- C. Mortality rate.
- D. Point prevalence.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

In a study of 400 adults, 200 lived near a highway and 30 of them developed asthma; 200 lived elsewhere and 10 developed asthma. The study was published in a respected regional journal. What is the relative risk for living near the highway?

- A. 0.33
- B. 3.0
- C. 10%
- D. 30

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

The risk of a fall in patients not on a sedative is 4%. The relative risk for patients on the sedative is 2.5. What is the risk of a fall for patients on the sedative?

- A.** 6.5%
- B.** 10%
- C.** 1.6%
- D.** 2.5%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A group of advanced practice nurses in a state with a new governor has data showing high rates of preventable asthma visits in low-income schools. No lawmaker has shown interest yet. Which step comes first?

- A.** Implementation of a school nurse program.
- B.** Wait for the new governor to propose a fix.
- C.** Evaluation of the school asthma policy.
- D.** Agenda setting: bring the problem and data to decision-makers' attention.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A nurse practitioner in a clinic with extended hours offers annual low-dose CT scans to long-time smokers who have no symptoms. The clinic also gives flu shots. What level of prevention are the CT scans?

- A.** Secondary prevention.
- B.** Primary prevention.
- C.** Tertiary prevention.
- D.** Primary, because the clinic also vaccinates.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

Which activity is tertiary prevention?

- A.** Cardiac rehab after a heart attack.
- B.** Mammography screening.
- C.** Smoking-prevention education in middle school.
- D.** Hepatitis B vaccination.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A clinic finds that many patients with diabetes miss follow-up visits. Most live in a neighborhood with no bus line, and the clinic recently won a design award. What is the most useful framing for the team?

- A.** Patients are not motivated and need more education.
- B.** Missed visits are always a result of poor attitude.
- C.** Transportation is a social determinant limiting access; address it with community partners.
- D.** The clinic's award shows care quality is not the issue.

Target word _____	The one fact that decides _____	Answer ____	☐ sure ☐ unsure ☐ guess
-----------------------------	---	-----------------------	---

12.

A master's-prepared nurse leads the informatics team at a hospital with a new electronic record and has 15 years of ICU experience. A colleague calls her an APRN. Is that correct?

- A.** Yes; informatics nurses are clinical nurse specialists.
- B.** Yes; any master's-prepared nurse is an APRN.
- C.** No; informatics is an advanced role but not one of the four APRN roles.
- D.** Yes; her ICU experience qualifies her.

Target word _____	The one fact that decides _____	Answer ____	☐ sure ☐ unsure ☐ guess
-----------------------------	---	-----------------------	---

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer D Concept 1

On a rehab unit ~~with a new therapy gym~~, nurses and physical therapists each assume the other is walking patients after lunch, and several patients are not walked. ~~Both groups are highly skilled and well staffed.~~ Which IPEC domain is most at issue?

Target word: which domain **Decides:** Each group assumes the other owns the task.

A	Absolute language	Overstated; the specific failure is role clarity.
B	Adjacent category	No conflict of values is described.
C	Camouflage	The stem says both groups are skilled.
D	Correct	The gap is unclear ownership of a shared task.

2. Answer A Concept 2

A nurse calls a provider at 0300 about a post-op patient who had knee surgery ~~at a well known orthopedic center.~~ She describes the surgery, the patient's history, vital signs, and her concern that the patient may be bleeding, then pauses. What part of SBAR is missing?

Target word: missing SBAR element **Decides:** She gave S, B, and A but no request.

A	Correct	SBAR ends with a clear request for action.
B	Camouflage	The center's reputation is not the missing element.
C	Inverted operation	Background was given; repeating it does not complete the report.
D	Dropped element	She already stated her concern about bleeding.

3. Answer B Concept 2 · transfer

A nurse says, "I think the patient is developing sepsis." Which SBAR element is this?

Target word: classify an SBAR statement **Decides:** It is the nurse's clinical judgment.

A	Confusion set	Situation is the immediate problem being reported, such as a new fever and low blood pressure.
B	Correct	Her interpretation of the data is the assessment.
C	Adjacent category	Background is history and context.
D	Inverted operation	Recommendation is the request for action, which follows the assessment.

4. Answer C Concept 3

A county health department serving 20,000 residents, all free of the disease on January 1, records 200 new cases of a condition during the year. ~~The county's largest employer is a food plant.~~ What is the annual incidence?

Target word: incidence rate **Decides:** New cases / population at risk over the year.

A	Inverted operation	Divides 20,000 by 200 and misreads the result.
B	Wrong stem number	Off by a factor of ten in the conversion.
C	Correct	$200 / 20,000 = 0.01 = 10 \text{ per } 1,000.$
D	Dropped element	Reports the count without the population.

5. Answer D Concept 3 • transfer

A survey on June 1 finds 1,500 people currently living with diabetes in a town of 20,000. What does 7.5% describe?

Target word: name the measure **Decides:** All existing cases at a point in time.

A	Inverted operation	Compares two groups; there is only one here.
B	Confusion set	Incidence requires new cases over a period.
C	Adjacent category	Measures deaths, not cases.
D	Correct	Existing cases / population at one time.

6. Answer B Concept 4

In a study of 400 adults, 200 lived near a highway and 30 of them developed asthma; 200 lived elsewhere and 10 developed asthma. ~~The study was published in a respected regional journal.~~ What is the relative risk for living near the highway?

Target word: relative risk **Decides:** 15% / 5%.

A	Confusion set	Divides unexposed by exposed.
B	Correct	$30/200 = 0.15$; $10/200 = 0.05$; $0.15 / 0.05 = 3.0$.
C	Inverted operation	Subtracts the risks (15% – 5%) instead of dividing.
D	Wrong stem number	The count of exposed cases.

7. Answer B Concept 4 • transfer

The risk of a fall in patients not on a sedative is 4%. The relative risk for patients on the sedative is 2.5. What is the risk of a fall for patients on the sedative?

Target word: solve for exposed risk **Decides:** Exposed risk = RR × unexposed risk.

A	Inverted operation	Adds 2.5 to 4 instead of multiplying.
B	Correct	$2.5 \times 4\% = 10\%$.
C	Confusion set	Divides 4% by 2.5.
D	Wrong stem number	The relative risk read as a percentage.

8. Answer D Concept 5

A group of advanced practice nurses ~~in a state with a new governor~~ has data showing high rates of preventable asthma visits in low-income schools. No lawmaker has shown interest yet. Which step comes first?

Target word: first policy step **Decides:** Problem not yet on the agenda.

A	Dropped element	Skips agenda setting, formulation, and adoption.
B	Camouflage	The new governor does not replace the advocates' role in agenda setting.
C	Inverted operation	No policy exists yet to evaluate.
D	Correct	A problem must reach the agenda before a policy is drafted.

9. Answer A Concept 6

A nurse practitioner in a clinic with extended hours offers annual low-dose CT scans to long-time smokers who have no symptoms. ~~The clinic also gives flu shots.~~ What level of prevention are the CT scans?

Target word: level of prevention **Decides:** Screening to find disease early in people without symptoms.

A	Correct	Screening detects disease early before symptoms.
B	Confusion set	Primary prevents disease from starting, like the flu shot.
C	Inverted operation	Tertiary manages existing, known disease.
D	Camouflage	The flu shot does not change the level of the CT scans.

10. Answer A Concept 6 • transfer

Which activity is tertiary prevention?

Target word: identify tertiary **Decides:** Limiting harm from existing disease.

A	Correct	Reduces complications in existing disease.
B	Confusion set	Screening is secondary.
C	Inverted operation	Prevents onset: primary.
D	Adjacent category	Vaccination is primary.

11. Answer C Concept 7

A clinic finds that many patients with diabetes miss follow-up visits. Most live in a neighborhood with no bus line, and ~~the clinic recently won a design award.~~ What is the most useful framing for the team?

Target word: framing **Decides:** Lack of transportation is a social determinant.

A	Inverted operation	Blames individuals for a structural barrier.
B	Absolute language	Absolute claim ignoring barriers.
C	Correct	Conditions where people live shape access and outcomes.
D	Camouflage	The award does not address missed visits.

12. Answer C Concept 8

A master's-prepared nurse leads the informatics team ~~at a hospital with a new electronic record and has 15 years of ICU experience.~~ A colleague calls her an APRN. Is that correct?

Target word: APRN status **Decides:** Informatics is an advanced role but not one of the four APRN roles.

A	Confusion set	Confuses two distinct roles.
B	Absolute language	Graduate education alone does not make an APRN.
C	Correct	APRN roles are NP, CNS, CRNA, and CNM.
D	Camouflage	Experience does not create APRN licensure.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	4	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	10	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	7	
Camouflage	Answers a stem fact that was never the question.	6	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	IPEC core competencies	Interprofessional practice rests on four domains: values and ethics, roles and responsibilities, interprofessional communication, and teams and teamwork.	Treating collaboration as each profession working well alone.	A team problem rooted in unclear roles or poor handoffs.
2	SBAR communication	Situation, Background, Assessment, Recommendation: state the problem, give context, share your judgment, and ask for a specific action.	Ending the report without a clear request or recommendation.	A handoff or call that rambles or leaves the listener unsure what is needed.
3	Incidence vs. prevalence	Incidence counts new cases in a population at risk over a period; prevalence counts all existing cases at a point in time.	Using total existing cases to describe how fast a disease is spreading.	"New cases during" vs. "currently living with."
4	Relative risk	Relative risk = risk in the exposed group / risk in the unexposed group; above 1 means higher risk with exposure.	Subtracting the risks, or dividing the wrong way.	Two groups with event counts and group sizes.
5	Policy process	Policy moves through agenda setting, formulation, adoption, implementation, and evaluation.	Drafting a bill before the problem is on decision-makers' agenda.	Advocates trying to get a problem noticed vs. written into law.
6	Levels of prevention	Primary prevents disease before it starts; secondary finds it early (screening); tertiary limits harm from existing disease.	Calling screening primary prevention.	Whether the person already has the disease and whether it is known.
7	Social determinants of health	Where people live, work, learn, and play (housing, food, transport, income) shape outcomes more than clinical care alone.	Attributing poor outcomes only to individual choices.	A population with a barrier outside the clinic.
8	APRN roles	The four APRN roles are nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, and certified nurse-midwife; nurse educators, leaders, and informaticists are advanced roles but not APRN roles.	Calling any master's-prepared nurse an APRN.	A role that is advanced but not licensed for direct advanced clinical practice.

Course scope (public description): Essentials of Advanced Nursing Roles and Interprofessional Practice explores essential characteristics of the advanced professional nurse in the role of leader, educator, practitioner, or informatics specialist. In this course, students will apply evidence-based strategies to facilitate interprofessional collaboration on teams. Students will explore the role of nurses in advocating for change at the bedside, as well as leading teams to advocate for health policy reform. Students will gather and analyze data to identify patients and

populations at risk and recommend policy change to improve health outcomes in the community.
