Facilitation of Context-Based Student-Centered Learning

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

After a high-fidelity sepsis simulation in a lab that recently got new manikins, students are anxious and the next group is waiting. The scenario ran 5 minutes over. What should the educator do?

- A. Skip the debriefing to get back on schedule.
- B. Grade each student's performance and move on.
- C. List every mistake in front of the group.
- D. Lead a structured debriefing in a psychologically safe setting that focuses on reflection.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

In a community health course taught in a building with a green roof, students complete a home visit and then write a reflective journal about what they noticed. The course has 32 students. According to Kolb, what stage comes next?

- A. Summative assessment.
- B. Abstract conceptualization: link observations to theory and concepts.
- C. Active experimentation.
- D. Concrete experience.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3. [TRANSFER — reversed stem / different variable]

Students try out a revised teaching plan with a new patient after forming a theory from earlier visits. Which Kolb stage is this?

- A. Concrete experience.
- B. Abstract conceptualization.
- C. Reflective observation.
- D. Active experimentation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A nurse educator whose course is held in a large lecture hall with fixed seats moves her fluid-and-electrolyte lecture to short videos students watch before class. Class time is then used for small-group case problems. The hall seats 150. Which approach is this?

- A. A flipped classroom.
- B. Not possible, because the hall has fixed seats.
- C. Traditional lecture.
- D. A fully online asynchronous course.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A new clinical instructor who worked in the ICU for ten years writes this objective: “The student will understand heart failure.” The course coordinator wants an objective that is measurable and at a higher cognitive level. The instructor’s schedule includes two clinical days a week. Which revision is best?

- A. “The student will know heart failure well.”
- B. “The student will appreciate heart failure care.”
- C. “The student will analyze assessment data to prioritize care for a patient with heart failure.”
- D. “The student will list the signs of heart failure.”

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

Which objective sits at the lowest level of Bloom’s revised taxonomy?

- A. Design a discharge teaching plan for a new diabetic patient.
- B. Recall the normal range for serum potassium.
- C. Apply the fall-risk protocol to an assigned patient.
- D. Justify the choice of a nursing intervention.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

At a nursing school that recently expanded its library hours, an educator gives small groups an unfolding case of a postoperative patient. The groups decide what they need to learn, research it, and apply it back to the case. The library has 24 study rooms. Which strategy is this?

- A. Rote memorization drills.
- B. Direct instruction.
- C. Problem-based learning.
- D. Independent library study.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

During clinical at a hospital that recently opened a new cafeteria, a student sees that her patient's respiratory rate has risen from 16 to 28 and that he is restless. Her clinical group has eight students. In Tanner's clinical judgment model, which step has she just completed?

- A. Reflecting.
- B. Noticing.
- C. Interpreting.
- D. Responding.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

After the shift, a student reviews with her instructor what she did well and what she would change about her response when her patient's condition shifted. Which Tanner step is this?

- A. Noticing.
- B. Responding.
- C. Interpreting.
- D. Reflecting.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A first-semester student in a program that recently hired three new faculty is learning to give IV push medications. The educator first demonstrates, then guides the student step by step, then gradually lets the student perform on her own. The skills lab is open on weekends. Which concept does this sequence show?

- A.** Scaffolding.
- B.** Self-directed learning from day one.
- C.** Summative evaluation.
- D.** Rote learning.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

An educator teaching an RN-to-BSN course to working nurses, many of whom commute over an hour, builds assignments around problems the nurses face on their own units and lets them choose topics. The course is 8 weeks long. Which principle guides this design?

- A.** Andragogy.
- B.** Short assignments required by the 8-week term.
- C.** Pedagogy.
- D.** Behaviorism.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12. [TRANSFER — reversed stem / different variable]

Which assumption belongs to Knowles's andragogy rather than traditional pedagogy?

- A.** Learners depend on the teacher to decide what they learn.
- B.** Adults always prefer lectures.
- C.** Adults want to apply learning right away to real problems.
- D.** Motivation comes mainly from grades.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer D Concept 1

After a high-fidelity sepsis simulation ~~in a lab that recently got new manikins~~, students are anxious and the next group is waiting. ~~The scenario ran 5 minutes over~~. What should the educator do?

Target word: post-simulation step **Decides:** Simulation learning happens largely in debriefing.

A	Camouflage	Reacts to the time overrun; skipping debriefing loses the learning.
B	Adjacent category	Grading is evaluation, not reflective debriefing.
C	Inverted operation	Undermines the psychological safety that debriefing needs.
D	Correct	Best-practice standards require debriefing after simulation.

2. Answer B Concept 2

In a community health course ~~taught in a building with a green roof~~, students complete a home visit and then write a reflective journal about what they noticed. ~~The course has 32 students~~. According to Kolb, what stage comes next?

Target word: next Kolb stage **Decides:** Experience and reflection are done.

A	Adjacent category	Assessment is not a stage of Kolb's cycle.
B	Correct	After reflection, learners form concepts.
C	Dropped element	Skips forming concepts before trying them out.
D	Inverted operation	That stage already happened.

3. Answer D Concept 2 · transfer

Students try out a revised teaching plan with a new patient after forming a theory from earlier visits. Which Kolb stage is this?

Target word: name the stage — reversed **Decides:** Testing ideas in a new situation.

A	Inverted operation	Although a new experience follows, the defining act is testing the theory.
B	Confusion set	Forming the theory came before this step.
C	Confusion set	Reflection looks back; this is trying something new.
D	Correct	Applying new ideas in practice is active experimentation.

4. Answer A Concept 3

A nurse educator ~~whose course is held in a large lecture hall with fixed seats~~ moves her fluid-and-electrolyte lecture to short videos students watch before class. Class time is then used for small-group case problems. ~~The hall seats 150~~. Which approach is this?

Target word: name the strategy **Decides:** Content before class, application in class.

A	Correct	Moving content outside class and application inside is flipping.
B	Camouflage	Group work can happen in any room.
C	Inverted operation	Lecture puts content delivery in class.
D	Adjacent category	Class still meets in person.

5. Answer C Concept 4

A new clinical instructor ~~who worked in the ICU for ten years~~ writes this objective: "The student will understand heart failure." The course coordinator wants an objective that is measurable and at a higher cognitive level. ~~The instructor's schedule includes two clinical days a week.~~ Which revision is best?

Target word: measurable, higher-level objective **Decides:** Measurable verb at the analysis level or above.

A	Dropped element	Still not measurable.
B	Adjacent category	A vague affective verb that cannot be observed.
C	Correct	"Analyze" is measurable and higher order.
D	Confusion set	Measurable, but at the lowest (remember) level.

6. Answer B Concept 4 • transfer

Which objective sits at the lowest level of Bloom's revised taxonomy?

Target word: lowest level **Decides:** Remember = recall facts.

A	Inverted operation	Design is create, the highest level.
B	Correct	Recall is the remember level.
C	Confusion set	Apply is the third level.
D	Confusion set	Justify is evaluate, a high level.

7. Answer C Concept 5

At a nursing school ~~that recently expanded its library hours~~, an educator gives small groups an unfolding case of a postoperative patient. The groups decide what they need to learn, research it, and apply it back to the case. ~~The library has 24 study rooms.~~ Which strategy is this?

Target word: name the strategy **Decides:** Groups set their own learning needs from a problem.

A	Adjacent category	Drills practice recall, not problem solving.
B	Inverted operation	In direct instruction the teacher delivers content first.
C	Correct	PBL starts from a problem and self-identified learning needs.
D	Camouflage	The library detail does not change the group, problem-driven design.

8. Answer B Concept 6

During clinical at a hospital ~~that recently opened a new cafeteria~~, a student sees that her patient's respiratory rate has risen from 16 to 28 and that he is restless. ~~Her clinical group has eight students.~~ In Tanner's clinical judgment model, which step has she just completed?

Target word: Tanner step **Decides:** She has perceived the change but not yet made sense of it.

A	Inverted operation	Reflection comes after the situation.
B	Correct	Perceiving a change in the patient is noticing.
C	Confusion set	Interpreting is making sense of what was noticed.
D	Dropped element	No action has been taken yet.

9. Answer D Concept 6 • transfer

After the shift, a student reviews with her instructor what she did well and what she would change about her response when her patient's condition shifted. Which Tanner step is this?

Target word: Tanner step — reversed **Decides:** Looking back after acting.

A	Inverted operation	Noticing is the first step, not the last.
B	Confusion set	Responding was the action she is now reviewing.
C	Confusion set	Interpreting happens during the situation.
D	Correct	Reviewing actions and outcomes afterward is reflection.

10. Answer A Concept 7

A first-semester student in a program ~~that recently hired three new faculty~~ is learning to give IV push medications. The educator first demonstrates, then guides the student step by step, then gradually lets the student perform on her own. ~~The skills lab is open on weekends.~~ Which concept does this sequence show?

Target word: name the concept **Decides:** Support given, then faded.

A	Correct	Temporary support withdrawn as skill grows is scaffolding.
B	Inverted operation	Scaffolding starts with support, not independence.
C	Confusion set	Evaluation judges performance; it does not provide support.
D	Adjacent category	Rote learning is repetition without guided fading.

11. Answer A Concept 8

An educator teaching an RN-to-BSN course to working nurses, ~~many of whom commute over an hour,~~ builds assignments around problems the nurses face on their own units and lets them choose topics. ~~The course is 8 weeks long.~~ Which principle guides this design?

Target word: name the principle **Decides:** Self-direction and job-centered problems for adults.

A	Correct	Knowles's adult learning principles stress self-direction, experience, and relevance.
B	Camouflage	Course length does not explain learner choice and real problems.
C	Inverted operation	Pedagogy is teacher-directed.
D	Adjacent category	Behaviorism centers on reinforcement, not learner choice.

12. Answer C Concept 8 • transfer

Which assumption belongs to Knowles's andragogy rather than traditional pedagogy?

Target word: identify andragogy **Decides:** Problem-centered, immediate application.

A	Inverted operation	That is a pedagogical assumption.
B	Absolute language	Andragogy favors active, experience-based learning.
C	Correct	Andragogy assumes a problem-centered orientation.
D	Confusion set	Andragogy stresses internal motivation.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	0	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	11	
Absolute language	Always, never, guarantee — where judgment applies.	1	
Confusion set	Every option is real; the test is exact role-matching.	10	
Camouflage	Answers a stem fact that was never the question.	4	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Simulation debriefing	Every simulation is followed by a structured, facilitated debriefing in a psychologically safe setting that promotes reflection.	Skipping or shortening debriefing, or turning it into public criticism or grading.	A simulation just ended and time is short.
2	Kolb's experiential learning cycle	Concrete experience → reflective observation → abstract conceptualization → active experimentation.	Jumping from reflection straight to trying again.	Students just completed one stage; what comes next?
3	Flipped classroom	Content is learned before class (videos, readings); class time is used for active application.	Thinking a flipped class needs special rooms or is fully online.	Lecture moved to pre-class and cases in class.
4	Bloom's taxonomy and measurable objectives	Objectives use measurable action verbs matched to the intended level: remember, understand, apply, analyze, evaluate, create.	Using "understand" or "know," or choosing a low-level verb when a higher level is required.	An objective to revise or rank.
5	Problem-based learning	Small groups start from a realistic problem, identify what they need to learn, research it, and apply it back to the problem.	Confusing it with independent study or direct instruction.	Groups define their own learning needs from a case.
6	Tanner's clinical judgment model	Noticing → interpreting → responding → reflecting.	Labeling the act of noticing a change as interpreting it.	What the student has just done: spotted, made sense of, acted on, or looked back on.
7	Scaffolding	The educator provides support within the learner's zone of proximal development, then fades it as competence grows.	Expecting full independence from the start, or never removing support.	Demonstrate → guide → release.
8	Andragogy	Adult learners are self-directed, draw on experience, and want problem-centered learning they can apply right away.	Designing adult courses around teacher-directed, grade-driven pedagogy.	Working professionals choosing topics tied to their jobs.

Course scope (public description): Facilitation of Context-Based Student-Centered Learning explores how the nurse educator will incorporate authentic experiences into the creation of course plans that facilitate scholarly inquiry, collaboration, and knowledge acquisition in varied educational environments. Emphasis is placed on innovative, transformational, and experiential teaching and learning strategies to facilitate student development of professional, context-based nursing principles, knowledge, skills, and behavior. Evolving Roles of Nurse Educators in Diverse Environments is a prerequisite to this course.
