Gender and Health

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

A clinic's intake form, updated last month by a new records vendor, is being revised to measure gender separately from sex. Which question measures gender?

- A. What sex were you assigned at birth?
- B. What is your current gender identity?
- C. None needed; sex and gender are always the same, so one question is enough.
- D. What were your most recent hormone levels?

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Research shows that women, on average, clear a certain sleep medication from the body more slowly because of differences in body composition and liver enzymes. Is this a sex difference or a gender difference?

- A. A social determinant of health.
- B. Neither, since drug effects are the same for everyone.
- C. A sex difference.
- D. A gender difference.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A county prenatal clinic next to a new community garden gives every patient an identical 30-minute visit. Some patients speak limited English and have no reliable transportation. Which change reflects equity?

- A. Keep visits identical for everyone, since that is fair.
- B. Give every patient the same bus voucher, whether they need it or not.
- C. Hold visits in the community garden.
- D. Provide interpreters, transportation help, and longer visits for patients who need them.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

Which action reflects equality rather than equity?

- A.** Providing interpreters for patients with limited English.
- B.** Offering sliding-scale fees based on income.
- C.** Scheduling longer visits for patients with complex needs.
- D.** Giving every patient the same English-only brochure.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

At a clinic that recently hired two new midwives, a woman has uncontrolled high blood pressure. She works two jobs without paid sick leave and lives in an area with no full-service grocery store. Which approach best addresses social determinants of health?

- A.** Tell her to try harder with her diet.
- B.** Screen for social needs, link her to food assistance, and offer flexible or telehealth visits.
- C.** Refer her to a midwife.
- D.** Add another medication and change nothing else.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

A sleep medication was approved after trials at 30 sites that enrolled mostly men. After approval, reports showed more next-morning impairment in women, and the recommended starting dose for women was lowered. What principle does this illustrate?

- A.** The trial needed more sites.
- B.** The drug did not work for anyone.
- C.** Trials must include both sexes and analyze results by sex, because findings in men may not apply to women.
- D.** Women are more sensitive to every drug.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A 58-year-old woman comes to a recently remodeled urgent care clinic with fatigue, nausea, and jaw discomfort but no crushing chest pain. Staff suggest she is anxious. What does gender and health research warn about this situation?

- A. No chest pain rules out a heart attack.
- B. Women more often have heart attack symptoms other than chest pain, and attributing them to anxiety can delay standard cardiac evaluation.
- C. The clinic's remodel likely caused her anxiety.
- D. Heart disease is rare in women.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

Which example shows bias in health care rather than a biological sex difference?

- A. Clinicians more often attribute women's pain to emotional causes and give less pain medication than to men with the same findings.
- B. Osteoporosis rates rise in women after menopause.
- C. Women on average have smaller body size, which affects some drug doses.
- D. Only people who can become pregnant develop preeclampsia.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A state agency's report, released on its new data portal, shows that Black women have higher maternal mortality than white women, even among those with college degrees. Which concept best explains why analysts examine race and gender together?

- A. Education level, which fully explains the gap.
- B. Equality.
- C. Biological determinism.
- D. Intersectionality.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

Which analysis best applies intersectionality?

- A.** Comparing all women with all men.
- B.** Reporting one average for the whole population.
- C.** Comparing outcomes for groups defined by combined identities, such as Latina women with disabilities.
- D.** Reporting the effect of each factor separately and adding them up.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A nurse educator at a women's health clinic that recently expanded its parking lot explains a new birth control method to a patient with limited health literacy. What is the best way to confirm understanding?

- A.** Ask the patient to explain in her own words how and when to use the method.
- B.** Give her a detailed technical pamphlet.
- C.** Ask, 'Do you understand?'
- D.** Repeat the explanation more loudly.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A community health center with a new electronic health record wants to track gender-related health disparities. What is the best practice for collecting gender identity data?

- A.** Ask all patients, privately, a two-step question (current gender identity and sex assigned at birth), allow them to decline, and record name and pronouns.
- B.** Use a single male/female checkbox.
- C.** Require every patient to answer before being seen.
- D.** Have staff record gender based on appearance.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

A clinic's intake form, ~~updated last month by a new records vendor,~~ is being revised to measure gender separately from sex. Which question measures gender?

Target word: item measuring gender **Decides:** Gender is identity, not biology.

A	Confusion set	Measures sex, the biological category recorded at birth.
B	Correct	Gender identity is a person's internal sense of gender.
C	Absolute language	They are distinct concepts and do not always align.
D	Adjacent category	A biological measure related to sex.

2. Answer C Concept 1 • transfer

Research shows that women, on average, clear a certain sleep medication from the body more slowly because of differences in body composition and liver enzymes. Is this a sex difference or a gender difference?

Target word: classify the difference **Decides:** A biological mechanism.

A	Adjacent category	Social determinants are living and working conditions.
B	Dropped element	Ignores the documented biological difference.
C	Correct	Differences in physiology and metabolism are biological.
D	Inverted operation	Gender concerns identity and social roles, not metabolism.

3. Answer D Concept 2

A county prenatal clinic ~~next to a new community garden~~ gives every patient an identical 30-minute visit. Some patients speak limited English and have no reliable transportation. Which change reflects equity?

Target word: equity approach **Decides:** Different barriers require different support.

A	Confusion set	That is equality; it leaves unequal barriers in place.
B	Dropped element	Ignores differences in need; still equality.
C	Camouflage	The garden detail does not address the barriers.
D	Correct	Tailors resources so all can reach the same outcome.

4. Answer D Concept 2 • transfer

Which action reflects equality rather than equity?

Target word: identify equality **Decides:** Same resource for all regardless of need.

A	Inverted operation	That is equity: support based on need.
B	Adjacent category	Adjusts cost to need: equity.
C	Confusion set	Allocates time by need: equity.
D	Correct	Identical resources for all, regardless of language needs.

5. Answer B Concept 3

At a clinic ~~that recently hired two new midwives~~, a woman has uncontrolled high blood pressure. She works two jobs without paid sick leave and lives in an area with no full-service grocery store. Which approach best addresses social determinants of health?

Target word: SDOH-informed approach **Decides:** Work and food access drive her barriers.

A	Adjacent category	Frames a structural barrier as personal effort.
B	Correct	Addresses the conditions blocking her care.
C	Camouflage	Uses the new-staff detail; does not address her needs.
D	Dropped element	Ignores the social conditions.

6. Answer C Concept 4

A sleep medication was approved after trials ~~at 30 sites~~ that enrolled mostly men. After approval, reports showed more next-morning impairment in women, and the recommended starting dose for women was lowered. What principle does this illustrate?

Target word: research principle **Decides:** Mostly male samples missed a sex difference.

A	Camouflage	The number of sites is not the problem; who was enrolled is.
B	Inverted operation	It worked; the issue was dose-related side effects in women.
C	Correct	Sex-based differences in drug handling can change dosing.
D	Absolute language	Differences vary by drug; no blanket rule.

7. Answer B Concept 5

A 58-year-old woman comes to a ~~recently remodeled~~ urgent care clinic with fatigue, nausea, and jaw discomfort but no crushing chest pain. Staff suggest she is anxious. What does gender and health research warn about this situation?

Target word: risk in the scenario **Decides:** Women often present without classic chest pain.

A	Absolute language	Many heart attacks, especially in women, lack classic chest pain.
B	Correct	Non-classic presentation plus bias raises the risk of missed diagnosis.
C	Camouflage	Irrelevant setting detail.
D	Confusion set	Heart disease is a leading cause of death in women.

8. Answer A Concept 5 • transfer

Which example shows bias in health care rather than a biological sex difference?

Target word: identify bias **Decides:** Different treatment for the same findings.

A	Correct	Unequal treatment for equal findings reflects bias.
B	Confusion set	Linked to hormonal change, a sex difference.
C	Inverted operation	A biological difference, not bias.
D	Adjacent category	A reproductive biological fact.

9. Answer D Concept 6

A state agency's report, ~~released on its new data portal~~, shows that Black women have higher maternal mortality than white women, even among those with college degrees. Which concept best explains why analysts examine race and gender together?

Target word: concept **Decides:** Identities combine to shape risk.

A	Dropped element	The gap persists at the same education level.
B	Adjacent category	Equality is about identical resources, not analysis of overlapping identities.
C	Confusion set	Attributes the gap to biology, ignoring social and structural causes.
D	Correct	Overlapping identities produce distinct experiences of disadvantage.

10. Answer C Concept 6 • transfer

Which analysis best applies intersectionality?

Target word: identify an intersectional analysis **Decides:** Groups defined by combinations of identities.

A	Dropped element	Looks at gender alone.
B	Inverted operation	Removes differences instead of examining them.
C	Correct	Examines the intersection, not single factors.
D	Adjacent category	Assumes effects are simply additive.

11. Answer A Concept 7

A nurse educator at a women's health clinic ~~that recently expanded its parking lot~~ explains a new birth control method to a patient with limited health literacy. What is the best way to confirm understanding?

Target word: confirm understanding **Decides:** Patient explains back in her own words.

A	Correct	Teach-back reveals gaps that yes/no questions hide.
B	Adjacent category	Dense text is a poor fit for limited health literacy.
C	Dropped element	Patients often say yes without understanding.
D	Confusion set	Volume does not fix comprehension.

12. Answer A Concept 8

A community health center ~~with a new electronic health record~~ wants to track gender-related health disparities. What is the best practice for collecting gender identity data?

Target word: collection method **Decides:** Accurate, respectful, universal collection.

A	Correct	Standard practice that is accurate and respectful.
B	Dropped element	Cannot capture gender identity.
C	Absolute language	Patients should be able to decline.
D	Confusion set	Guessing is inaccurate and disrespectful.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owled.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	7	
Wrong stem number	A figure copied from the prompt that is not the answer.	0	
Adjacent category	The right idea in the wrong bucket.	8	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	5	
Absolute language	Always, never, guarantee — where judgment applies.	4	
Confusion set	Every option is real; the test is exact role-matching.	8	
Camouflage	Answers a stem fact that was never the question.	4	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Sex vs. gender	Sex refers to biological attributes (chromosomes, hormones, anatomy); gender refers to identity, roles, and socially shaped expectations.	Using the terms interchangeably or measuring one with a question about the other.	A biological mechanism vs. an identity or social role.
2	Equity vs. equality	Equality gives everyone the same resources; equity gives people what they need to reach the same outcome.	Assuming identical treatment is always fair.	Groups with different barriers receiving the same service.
3	Social determinants of health	Conditions where people live, work, and age (income, food access, housing, leave policies) shape outcomes, so care should screen for and address social needs.	Treating poor outcomes as purely a matter of medical care or personal effort.	Work, food, housing, or transport facts in a clinical scenario.
4	Sex-inclusive research	Drug and disease research must include both sexes and analyze results by sex, because results from mostly male samples may not generalize.	Assuming findings in men apply equally to women.	A problem found after approval in a group underrepresented in trials.
5	Bias in care and symptom presentation	Women more often present with symptoms other than classic chest pain in heart attacks, and bias toward emotional explanations can delay standard evaluation.	Treating atypical presentation as ruling out serious disease.	A woman with non-classic symptoms whose complaint is attributed to anxiety.
6	Intersectionality	Gender interacts with race, class, disability, and other identities, so disparities must be analyzed at their intersections, not one factor at a time.	Adding up single-factor effects or assuming one factor explains everything.	A disparity that persists after controlling for one factor such as education.
7	Health literacy and teach-back	Confirm understanding by asking the person to explain or show in their own words, using plain language.	Asking "Do you understand?" or handing out dense materials.	Checking whether a patient understood instructions.
8	Respectful sexual orientation and gender identity data	Collect gender identity with a two-step question (current identity and sex assigned at birth), asked of everyone, privately, with the option to decline, and record name and pronouns.	One male/female checkbox, staff guessing, or asking only certain patients.	A clinic planning to track gender-related disparities.

Course scope (public description): Gender and Health examines healthcare concerns, from both a historical perspective and the perspective current healthcare trends and practices. This course covers the following topics: the history of gender and health; current healthcare trends the definitions of sex and gender; and other, healthcare-related issues, including: equity versus equality, healthcare policies and bias, and health education. The goal of this course is to increase student knowledge and awareness of how healthcare is influenced by sex, gender,

and social determinants of health.
