Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

After a middle-income country joined a regional trade pact, imports of sugary drinks and packaged snacks rose sharply and adult obesity climbed. The same pact cut tariffs on generic medicines. The country's capital also hosted a major football tournament that year. Which statement best describes the health effect of globalization here?

- A. Globalization affects health only by spreading infectious disease.
- B. Globalization only harmed health.
- C. Trade flows had mixed effects: cheaper medicines and a less healthy food supply.
- D. The obesity rise reflects only personal food choices.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

2.

A health ministry, which recently moved into a new building, estimates that malaria caused 1,200 years of life lost to early death and 800 years lived with disability in one province last year. Donors requested the report in both English and French. What is the malaria burden in DALYs?

- A. 1,200 DALYs
- B. 2,000 DALYs
- C. 2,000 years of healthy life gained
- D. 400 DALYs

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

3. [TRANSFER — reversed stem / different variable]

A disease causes 5,000 DALYs in a district, of which 3,500 are years of life lost to early death. How many years lived with disability does it cause?

- A. 5,000
- B. 1,500
- C. 3,500
- D. 8,500

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

4.

A country of 2,000,000 people recorded 45,000 live births and 1,350 deaths of infants under age one last year, plus 600 deaths among children aged 1 to 4. What is the infant mortality rate?

- A. 0.68 per 1,000
- B. 43.3 per 1,000 live births
- C. 30 per 1,000 live births
- D. 33.3 per 1,000 live births

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

A country with 80,000 live births a year has a maternal mortality ratio of 250 per 100,000 live births. About how many maternal deaths occur each year?

- A. 200
- B. 2,000
- C. 250
- D. 320

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

Over 20 years a country expanded vaccination and piped water, and its death rate fell by half. Families still average six children. A new international airport opened last year. What population pattern should planners expect?

- A. Rapid population growth, since deaths fell before births.
- B. Rapid growth mainly from immigration through the new airport.
- C. Population decline, because the death rate fell.
- D. A stable population, because birth and death rates always fall together.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

A country has a low birth rate and a low death rate, and its population is aging and nearly flat. Which stage of the demographic transition is it in?

- A.** An epidemiologic transition stage.
- B.** A late stage, after both rates have fallen.
- C.** The middle stage of rapid growth.
- D.** The early stage, with high birth and death rates.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A lower-middle-income country reports rising rates of diabetes and high blood pressure in cities, while tuberculosis and childhood diarrhea remain leading causes of death in rural areas. Its health budget grew 4% this year. How is this pattern best described?

- A.** The demographic transition.
- B.** A completed epidemiologic transition.
- C.** Infectious disease has been eliminated in cities.
- D.** A double burden of disease.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

Country A has an income of \$1,500 per person; Country B has \$45,000 per person and several world-famous teaching hospitals. If each gains an extra \$1,000 per person spent on basic needs, where would you expect the larger increase in life expectancy?

- A.** The same in both, because the increase is the same.
- B.** Country B, because its hospitals can use the money best.
- C.** Country B, because health rises faster at higher income.
- D.** Country A.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

In one country, child mortality in remote northern districts is three times that of the capital. The north has few clinics and roads that wash out every rainy season. The capital's hospital recently won a design award. Why is this gap an inequity?

- A. The capital's award-winning hospital sets the standard.
- B. It is caused by northern families' choices about care.
- C. It is avoidable and rooted in unequal access to services and infrastructure.
- D. Any difference between groups is automatically an inequity.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11. [TRANSFER — reversed stem / different variable]

Which of these is a health inequality that is generally not considered an inequity?

- A. Every difference between groups is fair.
- B. Uninsured adults have later cancer diagnoses.
- C. Children in slums have more diarrhea than children in wealthy suburbs.
- D. Adults over 70 have more cataracts than adults in their 20s.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

In a rural district, most families cook indoors over open wood fires. Pneumonia is common in children under five, and women report eye irritation. The district recently got mobile phone coverage. Which intervention targets the main environmental risk?

- A. Cleaner cooking fuels or vented stoves.
- B. Outdoor air monitors in the district capital.
- C. Antibiotics for every child with a cough.
- D. Text-message alerts about outdoor smog.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

After a middle-income country joined a regional trade pact, imports of sugary drinks and packaged snacks rose sharply and adult obesity climbed. The same pact cut tariffs on generic medicines. ~~The country's capital also hosted a major football tournament that year.~~ Which statement best describes the health effect of globalization here?

Target word: characterize the globalization effect **Decides:** Trade flows produced both a harm (processed food) and a benefit (cheaper medicines).

A	Dropped element	Leaves out trade, marketing, and access to goods.
B	Absolute language	Ignores the cheaper generic medicines.
C	Correct	Globalization works through flows of goods and has uneven, mixed effects.
D	Adjacent category	Individual choice sits within a food supply reshaped by trade.

2. Answer B Concept 2

A health ministry, ~~which recently moved into a new building,~~ estimates that malaria caused 1,200 years of life lost to early death and 800 years lived with disability in one province last year. ~~Donors requested the report in both English and French.~~ What is the malaria burden in DALYs?

Target word: total DALYs **Decides:** $DALY = YLL + YLD$.

A	Dropped element	Counts only early deaths.
B	Correct	$1,200 + 800 = 2,000$.
C	Confusion set	Right number, but DALYs measure healthy years lost.
D	Inverted operation	Subtracts YLD from YLL.

3. Answer B Concept 2 · transfer

A disease causes 5,000 DALYs in a district, of which 3,500 are years of life lost to early death. How many years lived with disability does it cause?

Target word: solve for YLD **Decides:** $YLD = DALY - YLL$.

A	Dropped element	The total, without removing YLL.
B	Correct	$5,000 - 3,500 = 1,500$.
C	Wrong stem number	That is YLL.
D	Inverted operation	Adds instead of subtracting.

4. Answer C Concept 3

A country of 2,000,000 people recorded 45,000 live births and 1,350 deaths of infants under age one last year, ~~plus 600 deaths among children aged 1 to 4.~~ What is the infant mortality rate?

Target word: IMR per 1,000 live births **Decides:** $1,350 / 45,000 \times 1,000$.

A	Adjacent category	Uses total population instead of live births.
B	Camouflage	Adds the 1-to-4 deaths, which belong to under-5 mortality.
C	Correct	$1,350 / 45,000 \times 1,000 = 30$.
D	Inverted operation	Divides births by deaths.

5. Answer A Concept 3 • transfer

A country with 80,000 live births a year has a maternal mortality ratio of 250 per 100,000 live births. About how many maternal deaths occur each year?

Target word: solve for deaths **Decides:** $250 \times 80,000 / 100,000$.

A	Correct	$250 \times 0.8 = 200$.
B	Confusion set	Treats the ratio as per 10,000.
C	Wrong stem number	The ratio itself, not the count.
D	Inverted operation	Divides births by the ratio.

6. Answer A Concept 4

Over 20 years a country expanded vaccination and piped water, and its death rate fell by half. Families still average six children. ~~A new international airport opened last year.~~ What population pattern should planners expect?

Target word: transition stage and effect **Decides:** Deaths have fallen while births remain high.

A	Correct	This gap is the growth phase of the demographic transition.
B	Camouflage	The airport does not decide; natural increase drives growth.
C	Inverted operation	Fewer deaths with high births means growth, not decline.
D	Absolute language	Birth rates usually lag behind death rates.

7. Answer B Concept 4 • transfer

A country has a low birth rate and a low death rate, and its population is aging and nearly flat. Which stage of the demographic transition is it in?

Target word: name the stage from the pattern **Decides:** Both rates low and similar is the late stage.

A	Confusion set	That model tracks causes of death, not birth and death rates.
B	Correct	Low births and low deaths give slow or no growth.
C	Adjacent category	Rapid growth needs a gap between births and deaths.
D	Inverted operation	Early stages also have little growth, but both rates are high.

8. Answer D Concept 5

A lower-middle-income country reports rising rates of diabetes and high blood pressure in cities, while tuberculosis and childhood diarrhea remain leading causes of death in rural areas. ~~Its health budget grew 4% this year.~~ How is this pattern best described?

Target word: name the pattern **Decides:** Chronic and infectious disease are both major at the same time.

A	Confusion set	That model is about birth and death rates, not causes of disease.
B	Inverted operation	Infections are still leading causes, so the shift is incomplete.
C	Absolute language	Nothing in the stem supports elimination.
D	Correct	Both chronic and infectious diseases weigh on the system at once.

9. Answer D Concept 6

Country A has an income of \$1,500 per person; Country B has \$45,000 per person ~~and several world famous teaching hospitals~~. If each gains an extra \$1,000 per person spent on basic needs, where would you expect the larger increase in life expectancy?

Target word: where income adds most health **Decides:** Diminishing returns: gains are largest at low income.

A	Adjacent category	Assumes a straight-line link between income and health.
B	Camouflage	The hospital detail does not change diminishing returns.
C	Inverted operation	The curve flattens at high income.
D	Correct	At low incomes, extra money buys food, water, and care that save lives.

10. Answer C Concept 7

In one country, child mortality in remote northern districts is three times that of the capital. The north has few clinics and roads that wash out every rainy season. ~~The capital's hospital recently won a design award~~. Why is this gap an inequity?

Target word: why the difference is an inequity **Decides:** The gap stems from avoidable differences in access and resources.

A	Camouflage	The award does not explain why the gap is unfair.
B	Adjacent category	Shifts a structural cause to individual behavior.
C	Correct	Avoidable and unfair is the definition of inequity.
D	Absolute language	Some differences reflect biology or age.

11. Answer D Concept 7 • transfer

Which of these is a health inequality that is generally not considered an inequity?

Target word: difference without unfairness **Decides:** Age-related biology is not socially produced.

A	Absolute language	Many gaps are avoidable and unfair.
B	Confusion set	Access-driven and avoidable, so an inequity.
C	Inverted operation	Driven by unequal water and sanitation, so an inequity.
D	Correct	An expected biological difference by age.

12. Answer A Concept 8

In a rural district, most families cook indoors over open wood fires. Pneumonia is common in children under five, and women report eye irritation. ~~The district recently got mobile phone coverage~~. Which intervention targets the main environmental risk?

Target word: address household air pollution **Decides:** The smoke source is indoor solid-fuel cooking.

A	Correct	Reduces household smoke at the source for women and children.
B	Adjacent category	Measures outdoor city air, not household smoke.
C	Dropped element	Treats illness downstream and leaves the exposure in place.
D	Camouflage	Built on the phone detail; the risk is indoors.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	4	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	6	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	9	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	5	
Camouflage	Answers a stem fact that was never the question.	5	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	How globalization affects health	Globalization shapes health through cross-border flows of goods, people, money, and ideas, with mixed effects that fall unevenly on different groups.	Seeing globalization as purely harmful, or as mattering only for infectious disease spread.	A trade deal, travel, migration, or foreign marketing followed by a change in health.
2	Disability-adjusted life years (DALYs)	DALYs = years of life lost to early death (YLL) + years lived with disability (YLD); one DALY is one lost year of healthy life.	Counting only deaths, or treating DALYs as years gained.	YLL and YLD figures in the same stem.
3	Mortality rates and their denominators	Infant mortality = infant deaths per 1,000 live births; maternal mortality ratio = maternal deaths per 100,000 live births.	Using total population as the denominator or mixing the multipliers.	Deaths, live births, and a total population all in one stem.
4	Demographic transition	Death rates fall before birth rates, so a country in the middle stage grows rapidly until fertility catches up.	Assuming birth and death rates fall together.	Falling deaths from vaccines or clean water while birth rates stay high.
5	Epidemiologic transition and the double burden	As countries develop, chronic diseases rise; many low- and middle-income countries face both infectious and chronic disease at once.	Thinking a country faces either infectious or chronic disease, not both.	Rising diabetes or heart disease alongside ongoing TB or diarrheal disease.
6	Income and health: diminishing returns	Extra income buys the largest health gains in poor countries; at high incomes, added wealth adds little life expectancy.	Assuming the link between income and life expectancy is a straight line.	Two countries at very different income levels receive the same increase.
7	Health inequality vs. health inequity	An inequality is any measured difference; an inequity is a difference that is avoidable and unfair, rooted in social or economic conditions.	Calling every health difference an inequity, including those driven by age or biology.	A gap between groups and a cause that is (or is not) socially produced.
8	Environmental risk falls hardest on the poor	Environmental hazards such as unsafe water and household smoke from solid cooking fuels concentrate among low-income households, especially women and young children.	Focusing on outdoor city air or downstream treatment while missing the household source.	Cooking with wood, dung, or charcoal indoors, or unsafe water in a poor community.

Course scope (public description): Global Health prepares learners to identify and analyze Global Health as a field. Learners consider how globalization has affected the health of various groups of people throughout the world. Likewise, the learner also looks at how economic and environmental factors have different effects on different groups globally. Finally, the course presents the learner with knowledge of various global initiatives and international organizations that strive to promote health and well-being and reduce health disparities. The learner demonstrates their knowledge and skills by drafting an advocacy statement promoting the successful efforts of a global health organization.
