Health, Fitness, and Wellness

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A 10-year-old who loves drawing and has two older sisters plays soccer for 45 minutes on Tuesday and Thursday and swims for an hour on Saturday. Her parents think she is very active because her team won its league. Does she meet youth physical activity guidelines?

- A. No; children must do vigorous activity every single day.
- B. No; she needs at least 60 minutes of moderate-to-vigorous activity every day.
- C. Yes; winning the league shows she is fit enough.
- D. Yes; 150 minutes a week meets the guideline.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

A high school sophomore, whose favorite color is green, has jogged 2 miles three times a week at the same pace for four months. His times have stopped improving, and he just got new running shoes. Using the FITT principle, what is the best next step?

- A. Buy lighter running shoes.
- B. Keep the same routine; consistency alone brings gains.
- C. Double his distance, frequency, and pace next week.
- D. Gradually increase one variable, such as adding a faster interval day.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A PE teacher at a newly renovated middle school times students in a shuttle run that requires quick changes of direction. The class meets in the afternoon and uses red cones. Which fitness component does this test measure?

- A. Flexibility.
- B. Cardiorespiratory endurance.
- C. Agility, a health-related component.
- D. Agility, a skill-related component.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A school wants to add one test of a health-related fitness component. Which test fits?

- A.** A sit-and-reach test of flexibility.
- B.** A reaction-time light drill.
- C.** A 40-yard dash for speed.
- D.** A balance-beam walk.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A 14-year-old on the cross-country team, who ran her first race last fall, wants to train at vigorous intensity. Her coach uses the 220 – age estimate and a range of 70–85%. She trains on a hilly course near her house. What is her target heart rate range?

- A.** About 144–175 beats per minute.
- B.** About 164–199 beats per minute.
- C.** About 103–144 beats per minute.
- D.** About 154–187 beats per minute.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

Using the 220 – age estimate, a 16-year-old's heart rate during a workout is 102 beats per minute. What percent of estimated maximum is that?

- A.** 46%, below moderate intensity.
- B.** 70%, the start of vigorous intensity.
- C.** 200%.
- D.** 50%, the low end of moderate intensity.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A granola bar sold in a bright blue wrapper at the school store lists 10 g of fat, 30 g of carbohydrate, and 5 g of protein. It is advertised as “made with real honey.” About how many calories does it contain?

- A.** 45 calories
- B.** 180 calories
- C.** 230 calories
- D.** 405 calories

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

A 300-calorie snack gets 40% of its calories from fat. About how many grams of fat does it contain?

- A.** 30 g
- B.** About 13 g
- C.** 120 g
- D.** 40 g

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A school nurse screens a 12-year-old boy who plays trombone and is the tallest in his class. His BMI is 24, which falls at the 92nd percentile for his age and sex. How should his weight status be described?

- A.** Overweight.
- B.** Healthy weight, since a BMI of 24 is under the adult cutoff of 25.
- C.** Healthy weight, because tall children always have higher BMI.
- D.** Obesity.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

A 9-year-old girl's BMI is at the 97th percentile for her age and sex. What category is that?

- A.** Overweight.
- B.** Cannot be classified without her adult BMI category.
- C.** Obesity.
- D.** Healthy weight.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

A middle school with a new gym and a nationally ranked chess club is planning a substance-use prevention effort. Which approach is most strongly supported for lowering students' risk?

- A.** Handouts listing drug facts.
- B.** Expand the chess club.
- C.** Build school connectedness and give parents tools to monitor and talk with their children.
- D.** A one-time assembly with graphic images of addiction.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A 17-year-old who works weekends at a grocery store says she wants to quit vaping and has picked a quit date two weeks from now. She threw out one of her two vape pens and downloaded a quit app. Her best friend also vapes. Which stage of change is she in?

- A.** Action.
- B.** Preparation.
- C.** Contemplation.
- D.** Precontemplation, because her friend still vapes.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

A 10-year-old ~~who loves drawing and has two older sisters~~ plays soccer for 45 minutes on Tuesday and Thursday and swims for an hour on Saturday. Her parents think she is very active ~~because her team won its league~~. Does she meet youth physical activity guidelines?

Target word: meets guideline or not **Decides:** Children need 60 minutes every day.

A	Absolute language	Vigorous activity is recommended at least 3 days a week, not daily.
B	Correct	She is active three days totaling 150 minutes; the youth guideline is daily.
C	Camouflage	Team success does not measure her daily activity.
D	Adjacent category	150 minutes per week is the adult guideline.

2. Answer D Concept 2

A high school sophomore, ~~whose favorite color is green~~, has jogged 2 miles three times a week at the same pace for four months. His times have stopped improving, ~~and he just got new running shoes~~. Using the FITT principle, what is the best next step?

Target word: fix a plateau **Decides:** No variable has changed in months.

A	Camouflage	Gear is not a FITT variable.
B	Dropped element	Drops overload; the body has adapted to the current load.
C	Absolute language	Raising everything at once risks injury.
D	Correct	Progressive overload through one FITT change restarts gains safely.

3. Answer D Concept 3

A PE teacher ~~at a newly renovated middle school~~ times students in a shuttle run that requires quick changes of direction. ~~The class meets in the afternoon and uses red cones~~. Which fitness component does this test measure?

Target word: name the component **Decides:** Quick changes of direction.

A	Confusion set	Flexibility is range of motion, as in a sit-and-reach.
B	Confusion set	Endurance is measured by longer tests like the PACER.
C	Adjacent category	Right component, wrong category.
D	Correct	Changing direction quickly is agility.

4. Answer A Concept 3 • transfer

A school wants to add one test of a health-related fitness component. Which test fits?

Target word: pick a health-related test **Decides:** Health-related components link to disease risk.

A	Correct	Flexibility is a health-related component.
B	Confusion set	Reaction time is skill-related.
C	Inverted operation	Speed is skill-related.
D	Confusion set	Balance is skill-related.

5. Answer A Concept 4

A 14-year-old on the cross-country team, ~~who ran her first race last fall,~~ wants to train at vigorous intensity. Her coach uses the $220 - \text{age}$ estimate and a range of 70–85%. ~~She trains on a hilly course near her house.~~ What is her target heart rate range?

Target word: vigorous HR range **Decides:** $\text{Max HR} = 220 - 14 = 206$.

A	Correct	$206 \times 0.70 \approx 144$; $206 \times 0.85 \approx 175$.
B	Inverted operation	Adds her age: $234 \times 70\text{--}85\%$.
C	Adjacent category	That is roughly the 50–70% moderate range.
D	Dropped element	Uses 220 without subtracting her age.

6. Answer D Concept 4 • transfer

Using the $220 - \text{age}$ estimate, a 16-year-old's heart rate during a workout is 102 beats per minute. What percent of estimated maximum is that?

Target word: solve for intensity **Decides:** $102 / (220 - 16) = 102 / 204$.

A	Dropped element	$102 / 220$ leaves out the age adjustment.
B	Confusion set	Confuses the reading with the vigorous threshold; $102 / 204$ is only 50%.
C	Inverted operation	$204 / 102$ inverts the ratio.
D	Correct	$102 / 204 = 0.50$.

7. Answer C Concept 5

A granola bar ~~sold in a bright blue wrapper at the school store~~ lists 10 g of fat, 30 g of carbohydrate, and 5 g of protein. ~~It is advertised as "made with real honey."~~ About how many calories does it contain?

Target word: total calories **Decides:** Fat 9 kcal/g; carbohydrate and protein 4 kcal/g.

A	Wrong stem number	The total grams, not calories.
B	Dropped element	Uses 4 kcal for fat too: $45 \text{ g} \times 4$.
C	Correct	$10 \times 9 + 30 \times 4 + 5 \times 4 = 90 + 120 + 20 = 230$.
D	Inverted operation	Uses 9 kcal for every gram.

8. Answer B Concept 5 • transfer

A 300-calorie snack gets 40% of its calories from fat. About how many grams of fat does it contain?

Target word: solve for grams of fat **Decides:** 120 fat calories / 9 kcal per gram.

A	Confusion set	Divides by 4 kcal per gram, the carbohydrate/protein value.
B	Correct	$300 \times 0.40 = 120 \text{ kcal}$; $120 / 9 \approx 13.3 \text{ g}$.
C	Dropped element	That is fat calories, not grams.
D	Wrong stem number	The percentage, not grams.

9. Answer A Concept 6

A school nurse screens a 12-year-old boy ~~who plays trombone and is the tallest in his class~~. His BMI is 24, which falls at the 92nd percentile for his age and sex. How should his weight status be described?

Target word: classify BMI-for-age **Decides:** 85th to under 95th percentile.

A	Correct	The 85th to under 95th percentile range is overweight for children.
B	Adjacent category	Adult cutoffs do not apply to children.
C	Camouflage	Height is already built into BMI; percentiles decide the category.
D	Confusion set	Obesity begins at the 95th percentile.

10. Answer C Concept 6 • transfer

A 9-year-old girl's BMI is at the 97th percentile for her age and sex. What category is that?

Target word: classify from percentile **Decides:** 95th percentile and above.

A	Adjacent category	Overweight ends below the 95th percentile.
B	Dropped element	Children are classified by percentile, not adult categories.
C	Correct	The 95th percentile and above is obesity.
D	Inverted operation	Healthy weight is the 5th to under the 85th percentile.

11. Answer C Concept 7

A middle school ~~with a new gym and a nationally ranked chess club~~ is planning a substance-use prevention effort. Which approach is most strongly supported for lowering students' risk?

Target word: strongest protective approach **Decides:** Protective factors like connectedness and parental monitoring.

A	Dropped element	Information without skills or connection has limited effect.
B	Camouflage	Activities can help, but the club itself is not the evidence-based lever named.
C	Correct	These protective factors lower risk more than information alone.
D	Adjacent category	Scare tactics alone show weak lasting effects.

12. Answer B Concept 8

A 17-year-old ~~who works weekends at a grocery store~~ says she wants to quit vaping and has picked a quit date two weeks from now. She threw out one of her two vape pens and downloaded a quit app. ~~Her best friend also vapes~~. Which stage of change is she in?

Target word: name the stage **Decides:** A set date within a month and small steps taken.

A	Adjacent category	She has not yet stopped vaping.
B	Correct	Planning to act within a month and taking small steps is preparation.
C	Confusion set	Contemplation is thinking about change without a near-term plan.
D	Camouflage	Her friend's behavior does not set her stage.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	7	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	5	
Absolute language	Always, never, guarantee — where judgment applies.	2	
Confusion set	Every option is real; the test is exact role-matching.	8	
Camouflage	Answers a stem fact that was never the question.	5	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Youth physical activity guidelines	Children and adolescents ages 6–17 need at least 60 minutes of moderate-to-vigorous activity every day, including vigorous, muscle-strengthening, and bone-strengthening activity each at least 3 days a week.	Applying the adult guideline of 150 minutes per week to children.	A child's weekly activity total compared with a guideline.
2	FITT and progressive overload	Fitness plans are adjusted through Frequency, Intensity, Time, and Type; gains require gradually increasing the load (progressive overload), usually one variable at a time.	Raising all variables at once, or never changing the plan.	A plateau, or a plan change described in terms of how often, how hard, how long, or what kind.
3	Health-related vs. skill-related fitness	Health-related components are cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, and body composition; skill-related components are agility, balance, coordination, power, speed, and reaction time.	Classifying agility or speed as health-related.	A test or activity named, with a question about which component it measures.
4	Target heart rate	Estimated maximum heart rate $\approx 220 - \text{age}$; moderate intensity is about 50–70% and vigorous about 70–85% of that maximum.	Using 220 without subtracting age, or adding age.	An age and an intensity range.
5	Energy from macronutrients	Carbohydrate and protein supply 4 kcal per gram; fat supplies 9 kcal per gram.	Using 4 kcal for every gram, including fat.	A food label listing grams of fat, carbohydrate, and protein.
6	BMI-for-age percentiles	For children and teens, BMI is interpreted by age- and sex-specific percentiles: under 5th underweight, 5th to under 85th healthy weight, 85th to under 95th overweight, 95th and above obesity.	Applying adult BMI cutoffs (25, 30) to children.	A child's BMI given as a percentile.
7	Risk and protective factors for substance use	Protective factors such as parental monitoring, school connectedness, and delaying first use lower adolescent substance-use risk; risk factors include early use, peer use, and easy access; the adolescent brain is still developing, raising vulnerability to addiction.	Believing information alone or scare tactics are the strongest protection.	A question about what most lowers a teen's risk.

#	Concept	Rule	Trap	Tell
8	Stages of change	The transtheoretical model runs precontemplation (no intent), contemplation (thinking within six months), preparation (planning within a month, small steps), action (changed for under six months), and maintenance (six months or more).	Placing someone in action because they are thinking about or planning a change.	The person's intent and how long any new behavior has lasted.

Course scope (public description): Health, Fitness, and Wellness focuses on the importance and foundations of good health and physical fitness, particularly for children and adolescents. This course addresses health, nutrition, and fitness, and substance use and abuse.
