Learning Experience Design Foundations II

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

A team working in a bright new studio holds a 20-minute brainstorm on ways to help nurses practice a new charting system. Each time someone offers an idea, the project lead explains why it would not work. What should change?

- A. Extend the session to 40 minutes with the same rules.
- B. Critique harder so only the best ideas remain.
- C. Hold judgment until many ideas are listed, then narrow them using the problem statement.
- D. Let the project lead pick the best idea now.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A team has generated 60 ideas. What should happen next?

- A. Build all 60 as prototypes.
- B. Skip to usability testing.
- C. Cluster and narrow the ideas using criteria from the problem statement.
- D. Generate 60 more before any narrowing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A designer with a large budget and a skilled video team has a new idea for a branching scenario. No learners have seen it. What should she build first?

- A. A written report describing the idea.
- B. A fully produced video scenario.
- C. The final version, since changes are rare.
- D. A rough paper or wireframe version to test with a few learners.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A subject-matter expert who has worked at the utility company for 25 years must approve what each screen of a safety module will teach, in what order, and what learners will click. Which document should the designer share?

- A. A usability test report.
- B. A storyboard.
- C. A look-and-feel mockup.
- D. A color palette.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

The marketing director must approve colors, fonts, and layout before development. Which document fits?

- A. A learner persona.
- B. A list of learning objectives.
- C. A look-and-feel mockup of a sample screen.
- D. A full storyboard.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

On a quiz results screen for a course that won an industry award, the score, the retry button, and the feedback text are scattered in three corners, far apart. Which principle is most violated?

- A. Proximity.
- B. Repetition.
- C. Alignment.
- D. Contrast.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A module narrated by a professional voice actor shows a diagram of a pump next to a full paragraph of text that the narrator reads word for word. The module runs 12 minutes. What change best follows multimedia research?

- A. Keep the diagram and narration, and cut the paragraph to a few labels.
- B. Add background music for interest.
- C. Shorten the module to 6 minutes.
- D. Keep everything, since more channels always help.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

A designer adds funny, unrelated cartoon clips between lesson steps. Learning scores drop. Which principle explains this?

- A. Coherence: leave out material that does not support the goal.
- B. Humor always hurts learning.
- C. Redundancy.
- D. Contrast.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

Learners in a course that uses a stylish dark theme keep asking how far they are through the course and whether their answers saved. Which heuristic does this point to?

- A. Learner error; they should read the directions.
- B. Visibility of system status.
- C. The dark theme.
- D. Error prevention.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A team at a well-funded company has budget to test with 15 users. The lead proposes one test with all 15 at the end of development. What plan follows usability research?

- A. One round of 5 users, then launch.
- B. Test with 15 users per round, since more is always better.
- C. One round with all 15 users at the end.
- D. Three rounds of 5 users, fixing problems between rounds.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11. [TRANSFER — reversed stem / different variable]

If each test user reveals about 31% of usability problems, about what share of problems will 3 users reveal? (Use $1 - 0.69^3$.)

- A. About 33%
- B. About 67%
- C. 31%
- D. 93%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

During a usability test in a comfortable conference room with snacks, a participant hesitates on the navigation menu. The moderator, eager to help, says, “Just click the icon in the top left.” What is wrong?

- A. Nothing; keeping users comfortable matters most.
- B. The participant is not a good tester.
- C. The moderator should have explained the whole interface first.
- D. Helping hides the design problem; the moderator should ask the user to think aloud and observe.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

A team ~~working in a bright new studio~~ holds a 20-minute brainstorm on ways to help nurses practice a new charting system. Each time someone offers an idea, the project lead explains why it would not work. What should change?

Target word: fix the ideation process **Decides:** Judging during generation.

A	Wrong stem number	More time does not fix early judging.
B	Inverted operation	Deepens the problem.
C	Correct	Diverge first, converge after.
D	Dropped element	Skips divergence.

2. Answer C Concept 1 · transfer

A team has generated 60 ideas. What should happen next?

Target word: step after divergence **Decides:** Time to converge using criteria.

A	Absolute language	Not practical; narrow first.
B	Dropped element	Skips choosing and prototyping.
C	Correct	Convergence follows divergence.
D	Inverted operation	Stays in divergence without moving forward.

3. Answer D Concept 2

A designer ~~with a large budget and a skilled video team~~ has a new idea for a branching scenario. No learners have seen it. What should she build first?

Target word: first prototype fidelity **Decides:** Idea is untested.

A	Adjacent category	A report is not a testable prototype.
B	Camouflage	Budget does not justify polish before testing.
C	Absolute language	Early tests often lead to changes.
D	Correct	Low fidelity tests the concept cheaply and quickly.

4. Answer B Concept 3

A subject-matter expert ~~who has worked at the utility company for 25 years~~ must approve what each screen of a safety module will teach, in what order, and what learners will click. Which document should the designer share?

Target word: document for content approval **Decides:** Content, sequence, and interactions.

A	Inverted operation	Comes after something is built.
B	Correct	Storyboards lay out content, sequence, and interactions.
C	Confusion set	Shows visual style, not content flow.
D	Adjacent category	Visual detail only.

5. Answer C Concept 3 • transfer

The marketing director must approve colors, fonts, and layout before development. Which document fits?

Target word: document for visual approval **Decides:** Visual style.

A	Adjacent category	Describes learners, not visuals.
B	Dropped element	Leaves out any visual element.
C	Correct	Shows visual design.
D	Confusion set	Focuses on content and sequence.

6. Answer A Concept 4

On a quiz results screen ~~for a course that won an industry award~~, the score, the retry button, and the feedback text are scattered in three corners, far apart. Which principle is most violated?

Target word: name the principle **Decides:** Related items are far apart.

A	Correct	Related items should be grouped close together.
B	Adjacent category	About consistent styles.
C	Confusion set	About lining up to edges; the issue is grouping.
D	Confusion set	About making items stand out.

7. Answer A Concept 5

A module ~~narrated by a professional voice actor~~ shows a diagram of a pump next to a full paragraph of text that the narrator reads word for word. ~~The module runs 12 minutes.~~ What change best follows multimedia research?

Target word: apply the redundancy principle **Decides:** Narration duplicates on-screen text.

A	Correct	Removes redundant text so learners can focus on the graphic.
B	Inverted operation	Adds extraneous material.
C	Wrong stem number	Length is not the problem.
D	Absolute language	Duplicate text competes with the graphic.

8. Answer A Concept 5 • transfer

A designer adds funny, unrelated cartoon clips between lesson steps. Learning scores drop. Which principle explains this?

Target word: name the principle from the result **Decides:** Extra material unrelated to the goal.

A	Correct	Unrelated content takes attention from learning.
B	Absolute language	Relevant humor can help; unrelated material is the problem.
C	Confusion set	Redundancy is about duplicate text and narration.
D	Adjacent category	A visual design principle.

9. Answer B Concept 6

Learners in a course ~~that uses a stylish dark theme~~ keep asking how far they are through the course and whether their answers saved. Which heuristic does this point to?

Target word: name the heuristic **Decides:** Learners cannot see progress or save status.

A	Inverted operation	Blames users for a design gap.
B	Correct	Users need to see progress and system state.
C	Camouflage	Color is not the reported issue.
D	Adjacent category	About stopping mistakes, not showing status.

10. Answer D Concept 7

A team ~~at a well-funded company~~ has budget to test with 15 users. The lead proposes one test with all 15 at the end of development. What plan follows usability research?

Target word: test plan **Decides:** Small rounds with fixes find more problems.

A	Dropped element	Leaves out testing the fixes.
B	Absolute language	Returns diminish after about five.
C	Inverted operation	Finds issues late with repeated findings.
D	Correct	Each small round finds most issues; later rounds check fixes.

11. Answer B Concept 7 · transfer

If each test user reveals about 31% of usability problems, about what share of problems will 3 users reveal? (Use $1 - 0.69^3$.)

Target word: compute share found **Decides:** $0.69^3 \approx 0.33$, so about 67% found.

A	Dropped element	That is the share not yet found.
B	Correct	$1 - 0.329 \approx 0.67$.
C	Wrong stem number	One user's share.
D	Inverted operation	Adds 31% three times.

12. Answer D Concept 8

During a usability test ~~in a comfortable conference room with snacks~~, a participant hesitates on the navigation menu. The moderator, eager to help, says, "Just click the icon in the top left." What is wrong?

Target word: moderator behavior **Decides:** The moderator gave the answer.

A	Camouflage	Comfort does not justify leading.
B	Adjacent category	Blames the user for a design issue.
C	Inverted operation	Pre-training would hide even more issues.
D	Correct	Neutral observation reveals where the design fails.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owled.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	5	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	7	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	5	
Camouflage	Answers a stem fact that was never the question.	3	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Diverge, then converge	Ideation first generates many ideas without judging them, then narrows by criteria tied to the problem statement.	Critiquing ideas as they are offered, which shuts down the flow.	A brainstorm where ideas are being judged too early, or a list that needs narrowing.
2	Low-fidelity prototypes first	Start with quick, cheap prototypes (paper sketches, clickable wireframes) to test ideas early, and add polish only after the concept works.	Building a fully produced module before any learner has seen the idea.	A choice between a quick rough version and a polished build at an early stage.
3	Storyboard vs. look-and-feel mockup	A storyboard maps content, sequence, interactions, and instructional strategy screen by screen; a look-and-feel mockup shows visual style (colors, fonts, layout) for a sample screen.	Using a mockup to get sign-off on content flow, or a storyboard to decide colors.	What a stakeholder needs to approve: content plan or visual style.
4	Visual design principles (CRAP)	Contrast makes key items stand out, repetition keeps styles consistent, alignment connects elements to a clear grid, and proximity groups related items.	Mixing up proximity (grouping by distance) with alignment (lining up to edges).	A screen layout issue to name or fix.
5	Multimedia principles	Narration plus graphics beats narration plus identical on-screen text (redundancy), and extra decorative material that does not support the goal hurts learning (coherence).	Reading on-screen paragraphs aloud word for word, assuming more channels means more learning.	Narration, on-screen text, and graphics in the same screen.
6	Usability heuristics	Common heuristics include visibility of system status, consistency and standards, error prevention, and recognition rather than recall.	Treating usability issues as learner mistakes rather than design flaws.	Learners confused by navigation, progress, or controls.
7	Small, repeated usability tests	Testing with about five users finds most major problems (about 85% when each user reveals 31%); several small rounds with fixes in between beat one large test.	Waiting to test with a large group once at the end.	A plan for how many users and how many rounds of testing.
8	Neutral moderation with think-aloud	Give realistic tasks, ask users to think aloud, and observe without helping or leading, so the data show where the design fails.	Explaining the interface or rescuing users when they struggle.	A moderator's behavior during a test session.

Course scope (public description): Learning Experience Design Foundations II is the second of two foundational courses that provide the foundational knowledge and skills learning experience designers need to create human-centered, goal-oriented learning experiences. Continuing to the third, fourth, and final phases of the Design Thinking Process, this course teaches the process and importance of ideation as well as rapid prototyping. It

includes techniques for creating e-learning storyboards, which communicate content plans and instructional design strategies and “look and feel” mockups, which incorporate visual design principles and usability best practices. Finally, this course introduces usability testing methods and provides guidelines for planning usability tests for e-learning solutions. Learning Experience Design Foundations I is a prerequisite for this course.
