Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A middle school spent \$80,000 on new tablets last spring. In one science class, students now type their lab reports in a word processor instead of writing them by hand, and the teacher grades them the same way. The principal calls the rollout a success. At which SAMR level is this use?

- A. Augmentation
- B. Substitution
- C. Modification
- D. Redefinition

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Which activity is an example of Redefinition in the SAMR model?

- A. Any activity that uses a new device counts as Redefinition.
- B. Students interview a scientist in another country by live video and publish a shared multimedia report for a public audience.
- C. Students use spell check while writing an essay.
- D. Students read a PDF of the same textbook chapter.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A corporate trainer, who has led onboarding for eleven years, is building a compliance module for 300 new hires. She offers the content as a short video with captions, a text summary, and an infographic, and lets learners show mastery through a quiz or a recorded explanation. Which framework is she applying?

- A. Universal Design for Learning
- B. Differentiation only for the lowest scorers
- C. The SAMR model
- D. Individual accommodation plans

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A course already offers several ways to take in content and to show mastery. Which change adds the missing UDL principle?

- A.** Add another way to submit the final project.
- B.** Remove options so everyone has the same experience.
- C.** Add a fourth format for the same content.
- D.** Let learners choose topics tied to their own goals and set their own progress checkpoints.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A university adopts a popular video platform used by millions of students worldwide. A blind learner in an online history course, who works full time, reports that she cannot use the platform's quiz tool. What should be checked first?

- A.** Whether the videos have captions.
- B.** Whether her work schedule allows more time.
- C.** Nothing; a platform used by millions is already accessible.
- D.** Whether the quiz tool works with a screen reader and keyboard only, per WCAG.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

A learning designer has a \$5,000 budget and a vendor demo of a virtual reality headset next week. The objective is for nurses to practice explaining discharge instructions to patients in plain language. What should she do first?

- A.** Always choose the most immersive technology available.
- B.** Buy the headset and design the lesson around it.
- C.** Pick whichever tool fits the \$5,000 budget.
- D.** Define how nurses will practice and be assessed on the explanation skill, then pick a tool that supports it.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A fourth-grade teacher, voted teacher of the year, finds a free reading app with colorful graphics. Students would sign up with their names, ages, and email addresses. The app requires only a click-through agreement. What should happen before students use it?

- A. Have students accept the click-through terms themselves.
- B. Nothing; free apps are exempt from privacy rules.
- C. Review the vendor's privacy practices and confirm COPPA-compliant consent and district approval.
- D. Check only that the app is accessible.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

An instructional designer at a for-profit training company, which has clients in 14 states, finds a photo licensed CC BY-NC. She wants to use it in a course the company sells. The photo is high resolution. May she use it?

- A. No, not without separate permission; NC bars commercial use.
- B. Yes, because educational use is always fair use.
- C. Yes, because it is licensed CC and any CC work can be sold.
- D. Yes, as long as she credits the creator.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

A designer wants an image she can edit and use in a paid course with only a credit line. Which license allows that?

- A. CC BY-ND
- B. CC BY-NC
- C. CC BY
- D. All rights reserved

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

An online college's analytics team, based in Utah, builds a model that uses login frequency and early quiz scores to flag students who are likely to fail a course. The dashboard uses a green and red color scheme. What type of analytics is this?

- A. Predictive
- B. Prescriptive
- C. Descriptive
- D. Diagnostic

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11. [TRANSFER — reversed stem / different variable]

A system not only flags at-risk learners but also recommends a specific tutoring module for each one. Which level of analytics does the recommendation represent?

- A. Descriptive
- B. Predictive
- C. Prescriptive
- D. Diagnostic

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A high school history department, which recently moved to a new building, is choosing between two tablet activities. In one, students answer 50 multiple-choice date questions in a game with points. In the other, students build a short documentary arguing which cause of a war mattered most, using primary sources. Which activity better supports deep learning?

- A. The quiz game, because game points always increase deep learning.
- B. The documentary, because students analyze sources and create an argument.
- C. Both equally, because both use tablets.
- D. The quiz game, because 50 items cover more content.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

A middle school ~~spent \$80,000 on new tablets last spring~~. In one science class, students now type their lab reports in a word processor instead of writing them by hand, and the teacher grades them the same way. ~~The principal calls the rollout a success.~~ At which SAMR level is this use?

Target word: SAMR level **Decides:** The task is unchanged; only the tool changed.

A	Adjacent category	Would need a functional improvement, such as built-in feedback, that the stem does not describe.
B	Correct	Typing replaces handwriting with no functional change.
C	Confusion set	Requires the task itself to be redesigned.
D	Camouflage	Swayed by the cost and praise; nothing new became possible.

2. Answer B Concept 1 · transfer

Which activity is an example of Redefinition in the SAMR model?

Target word: reverse: pick the activity for a given level **Decides:** Redefinition makes a new task possible only with the technology.

A	Absolute language	The level depends on how the task changes, not on the device.
B	Correct	The task could not exist without the technology.
C	Adjacent category	A functional improvement: Augmentation.
D	Inverted operation	That is Substitution, the lowest level.

3. Answer A Concept 2

A corporate trainer, ~~who has led onboarding for eleven years~~, is building a compliance module ~~for 300 new hires~~. She offers the content as a short video with captions, a text summary, and an infographic, and lets learners show mastery through a quiz or a recorded explanation. Which framework is she applying?

Target word: name the design framework **Decides:** Multiple means of representation and expression built in from the start.

A	Correct	Offers built-in options for how learners take in content and show what they know.
B	Dropped element	UDL designs choices for all learners, not a subset.
C	Adjacent category	SAMR rates how technology changes a task, not design for learner variability.
D	Confusion set	Accommodations respond to one learner's documented need after the fact.

4. Answer D Concept 2 · transfer

A course already offers several ways to take in content and to show mastery. Which change adds the missing UDL principle?

Target word: identify the remaining principle **Decides:** Representation and expression are covered; engagement is missing.

A	Confusion set	Adds more action and expression, already covered.
B	Absolute language	Runs against UDL's aim of flexibility.
C	Inverted operation	Adds more representation, which is already covered.
D	Correct	Choice and relevance support multiple means of engagement.

5. Answer D Concept 3

A university adopts a popular video platform ~~used by millions of students worldwide~~. A blind learner in an online history course, ~~who works full time~~, reports that she cannot use the platform's quiz tool. What should be checked first?

Target word: first accessibility check **Decides:** A blind learner relies on a screen reader and keyboard access.

A	Adjacent category	Captions serve deaf or hard-of-hearing learners, not this need.
B	Confusion set	Extra time does not fix a tool she cannot operate.
C	Camouflage	Popularity does not prove accessibility.
D	Correct	Screen reader and keyboard operability are core WCAG requirements for blind users.

6. Answer D Concept 4

A learning designer ~~has a \$5,000 budget and a vendor demo of a virtual reality headset next week~~. The objective is for nurses to practice explaining discharge instructions to patients in plain language. What should she do first?

Target word: first step in selecting a technology **Decides:** Start from the objective, then match a tool.

A	Absolute language	Immersion is not always needed; role-play or video may fit better.
B	Inverted operation	Lets the tool drive the learning.
C	Camouflage	Budget limits options but does not decide fit to the objective.
D	Correct	The objective drives the tool choice.

7. Answer C Concept 5

A fourth-grade teacher, ~~voted teacher of the year~~, finds a free reading app ~~with colorful graphics~~. Students would sign up with their names, ages, and email addresses. The app requires only a click-through agreement. What should happen before students use it?

Target word: privacy requirement for young students **Decides:** Fourth graders are under 13 and the app collects personal data.

A	Inverted operation	Children cannot give the required consent.
B	Absolute language	Price does not exempt an app from COPPA or district policy.
C	Correct	Personal data from children under 13 requires verifiable parental consent and vetting.
D	Adjacent category	Accessibility matters, but the issue here is data privacy.

8. Answer A Concept 6

An instructional designer at a for-profit training company, ~~which has clients in 14 states~~, finds a photo licensed CC BY-NC. She wants to use it in a course the company sells. ~~The photo is high resolution~~. May she use it?

Target word: license terms applied to a commercial use **Decides:** NC means noncommercial only; the course is sold.

A	Correct	Selling the course is a commercial use.
B	Absolute language	Fair use is a case-by-case test, and commercial sale weighs against it.
C	Confusion set	CC licenses vary; NC restricts sale.
D	Dropped element	Covers the BY term but drops the NC term.

9. Answer C Concept 6 · transfer

A designer wants an image she can edit and use in a paid course with only a credit line. Which license allows that?

Target word: reverse: choose the license from the needed use **Decides:** Needs commercial use and derivatives, with attribution only.

A	Adjacent category	Forbids edits.
B	Inverted operation	Forbids the commercial use she needs.
C	Correct	Allows any use, including commercial and edits, with attribution.
D	Confusion set	Requires permission for any reuse.

10. Answer A Concept 7

An online college's analytics team, ~~based in Utah,~~ builds a model that uses login frequency and early quiz scores to flag students who are likely to fail a course. ~~The dashboard uses a green and red color scheme.~~ What type of analytics is this?

Target word: analytics level **Decides:** It estimates a future outcome.

A	Correct	It forecasts who is likely to fail.
B	Adjacent category	Would recommend specific actions, which the stem does not say it does.
C	Confusion set	Descriptive only reports what already happened.
D	Inverted operation	Explains past causes rather than forecasting.

11. Answer C Concept 7 · transfer

A system not only flags at-risk learners but also recommends a specific tutoring module for each one. Which level of analytics does the recommendation represent?

Target word: analytics level for a recommendation **Decides:** It says what to do.

A	Confusion set	Reports past activity only.
B	Dropped element	The flag is predictive; the recommendation adds the prescriptive step.
C	Correct	Recommending an action is prescriptive.
D	Adjacent category	Explains why something happened, not what to do next.

12. Answer B Concept 8

A high school history department, ~~which recently moved to a new building,~~ is choosing between two tablet activities. In one, students answer 50 multiple-choice date questions in a game with points. In the other, students build a short documentary arguing which cause of a war mattered most, using primary sources. Which activity better supports deep learning?

Target word: which activity promotes deeper thinking **Decides:** Analyzing sources and building an argument demand higher-order thinking.

A	Absolute language	Points can raise motivation but do not by themselves create depth.
B	Correct	Analysis and creation are higher-order tasks linked to deep learning.
C	Confusion set	The device is the same; the thinking demanded is not.
D	Wrong stem number	Volume of recall items does not deepen thinking.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	1	
Adjacent category	The right idea in the wrong bucket.	8	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	6	
Absolute language	Always, never, guarantee — where judgment applies.	6	
Confusion set	Every option is real; the test is exact role-matching.	9	
Camouflage	Answers a stem fact that was never the question.	3	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	SAMR levels of technology use	Substitution swaps a tool with no change in function; Augmentation adds useful features; Modification redesigns the task; Redefinition makes a task possible that could not exist without the technology.	Calling any use of new or expensive technology redefinition.	A description of what learners now do and whether the task itself changed.
2	Universal Design for Learning	Design up front for variability by offering multiple means of engagement (why), representation (what), and action and expression (how).	Treating UDL as individual accommodations added after a problem appears.	Giving choices in how content is presented or how learners show mastery.
3	Accessibility standards	Digital learning content should meet WCAG: text alternatives for images, captions for video, keyboard operability, and sufficient color contrast.	Assuming a tool is accessible because it is popular or mobile-friendly.	A learner using a screen reader, captions, or keyboard only.
4	Pedagogy before technology	Select a technology by first defining the learning objective and then choosing the tool that best supports it.	Picking the newest tool first and fitting the lesson to it.	A choice between tools with a stated learning goal.
5	Student data privacy (FERPA and COPPA)	FERPA protects education records; COPPA requires verifiable parental consent before collecting personal data from children under 13; vet vendor data practices before adoption.	Thinking a free app with a click-through agreement needs no review.	A tool that collects learner names, emails, or ages.
6	Copyright, fair use and open licenses	Fair use weighs purpose, nature, amount, and market effect; Creative Commons licenses set reuse terms such as attribution (BY), noncommercial (NC), and no derivatives (ND).	Believing anything used for education is automatically fair use.	Reusing images, video, or text in course materials.
7	Levels of learning analytics	Descriptive says what happened, diagnostic says why, predictive says what is likely, prescriptive says what to do.	Calling a dashboard of past completion rates predictive.	A report or model and a question about which kind of analytics it is.
8	Technology for deep learning	Deep learning is supported when technology has learners analyze, create, apply, and reflect, not just recall.	Equating more screen time or more quiz items with deeper learning.	Comparing activities by the thinking they demand.

Course scope (public description): Learning Technology provides opportunities for learners to research emerging learning technologies and see how they are changing current teaching and learning practices. This course also teaches strategies for evaluating learning technologies and their ability to facilitate deep learning and help learners achieve their learning goals, as well as their ability to accommodate learner differences and ensure

access for all learners. This course covers techniques that learning experience designers can use to implement technology safely, legally, and ethically in a variety of environments. Additionally, this course explores the types of learning analytics that various technologies generate and the ways in which they can be used to better understand learner progress and optimize the learning experience.
