Nursing Education Capstone

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

After a new sepsis-recognition module, a program collects end-of-module satisfaction ratings, pre/post test scores, and chart audits showing whether graduates now start sepsis screening on the job. The module was funded by a regional foundation. Which data source is Kirkpatrick level 3?

- A. The foundation's funding report.
- B. Chart audits showing graduates start sepsis screening on the job.
- C. Satisfaction ratings.
- D. Pre/post test scores.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

A program wants to show its fall-prevention curriculum reduced patient falls on partner units. Which Kirkpatrick level is that?

- A. Level 3, behavior.
- B. Level 1, reaction.
- C. Level 4, results.
- D. Level 2, learning.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A nurse educator plans to replace paper care plans with concept maps across the program. Many faculty have used paper care plans for over 20 years and do not see a problem with them. The program recently moved into a new building. Using Lewin's model, what should come first?

- A. Share data showing gaps in student clinical reasoning to build a felt need for change.
- B. Use the building move to announce the change.
- C. Require concept maps in all courses next term.
- D. Write a policy that makes concept maps permanent.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A capstone team will introduce a new clinical-judgment rubric to 30 faculty. A few faculty are respected, curious about new tools, and often asked for advice; several others dislike any change. The dean's office has new furniture. Whom should the team recruit first?

- A. All 30 faculty at once, with no special focus.
- B. The faculty who dislike any change.
- C. Only the dean, since leaders always decide adoption.
- D. The respected, curious faculty others turn to for advice.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A program plans to move all first-semester clinical hours to a new simulation format. The simulation vendor offers a discount if the full contract is signed by March. Scheduling, faculty training, and grading are untested. What is the best implementation step?

- A. Run a one-term pilot with one cohort and evaluate before scaling.
- B. Roll out program-wide and fix problems as they arise.
- C. Delay any change until every risk is removed.
- D. Sign the full contract to get the discount and roll out program-wide.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

Six weeks into a new medication-safety module, the team checks whether each section taught all four scheduled labs and used the required checklists. Exam results are not yet in. The team meets in a newly painted conference room. What type of evaluation is this?

- A. No evaluation, because exam results are not in.
- B. Process evaluation, checking whether the module was delivered as planned.
- C. Outcome evaluation, because it happens after the module starts.
- D. Summative evaluation, because data are being collected.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A capstone report on a new delirium-care curriculum lists: 12 workshops held, 180 nurses attended, and a 40% drop in unrecognized delirium on audited charts. The workshops were catered by a local cafe. Which item is an outcome?

- A. 180 nurses attended.
- B. Catering by a local cafe.
- C. 12 workshops held.
- D. A 40% drop in unrecognized delirium on audited charts.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

In a logic model, faculty time and simulation equipment are listed for a new course. Where do they belong?

- A. Inputs.
- B. Activities.
- C. Outcomes.
- D. Outputs.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A program's SWOT lists: faculty with strong simulation skills, a new state rule capping clinical placements, a partner hospital opening a new wing, and aging lab equipment. The program's mascot is a heron. Which is a threat?

- A. Aging lab equipment.
- B. The new state rule capping clinical placements.
- C. Faculty simulation skills.
- D. The partner hospital's new wing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

A program lists its own high faculty turnover in a SWOT. Which quadrant is correct?

- A. Threat.
- B. Opportunity.
- C. It cannot go in a SWOT.
- D. Weakness.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

After a curriculum change, a program's first-time licensure pass rate rose from 80% to 88%. The cohort was the largest in school history. By what percent did the pass rate increase?

- A.** 9.1%
- B.** 88%
- C.** 10%
- D.** 8%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12. [TRANSFER — reversed stem / different variable]

A program's retention rate rose by 5% from a starting rate of 60%. What is the new rate?

- A.** 65%
- B.** 5%
- C.** 63%
- D.** 57%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer B Concept 1

After a new sepsis-recognition module, a program collects end-of-module satisfaction ratings, pre/post test scores, and chart audits showing whether graduates now start sepsis screening on the job. ~~The module was funded by a regional foundation.~~ Which data source is Kirkpatrick level 3?

Target word: identify level 3 **Decides:** Level 3 is behavior change in practice.

A	Camouflage	Funding is an input, not an evaluation level.
B	Correct	Observed on-the-job behavior is level 3.
C	Adjacent category	Reaction is level 1.
D	Confusion set	Test gains are level 2, learning.

2. Answer C Concept 1 • transfer

A program wants to show its fall-prevention curriculum reduced patient falls on partner units. Which Kirkpatrick level is that?

Target word: level for a patient-result measure **Decides:** Organizational or patient results.

A	Confusion set	Behavior is what nurses do, not the patient result.
B	Wrong stem number	Reaction is learner satisfaction.
C	Correct	Patient outcomes such as fall rates are results.
D	Inverted operation	Learning is knowledge gain, the level below behavior.

3. Answer A Concept 2

A nurse educator plans to replace paper care plans with concept maps across the program. Many faculty have used paper care plans for over 20 years and do not see a problem with them. ~~The program recently moved into a new building.~~ Using Lewin's model, what should come first?

Target word: first step in Lewin **Decides:** Faculty see no need to change: unfreezing is needed.

A	Correct	Unfreezing creates readiness before the change is introduced.
B	Camouflage	The move does not create a felt need for this change.
C	Inverted operation	Jumps to the change stage before readiness exists.
D	Dropped element	Refreezing comes last; it skips unfreezing and changing.

4. Answer D Concept 3

A capstone team will introduce a new clinical-judgment rubric to 30 faculty. A few faculty are respected, curious about new tools, and often asked for advice; several others dislike any change. ~~The dean's office has new furniture.~~ Whom should the team recruit first?

Target word: first recruits **Decides:** Early adopters and opinion leaders speed diffusion.

A	Dropped element	Ignores the adopter categories that drive spread.
B	Inverted operation	Laggards are the last to adopt; starting there stalls diffusion.
C	Absolute language	Formal authority alone does not guarantee adoption.
D	Correct	Early adopters who are opinion leaders spread adoption to the majority.

5. Answer A Concept 4

A program plans to move all first-semester clinical hours to a new simulation format. ~~The simulation vendor offers a discount if the full contract is signed by March.~~ Scheduling, faculty training, and grading are untested. What is the best implementation step?

Target word: best implementation step **Decides:** Untested logistics call for a small trial.

A	Correct	A pilot tests feasibility and finds problems before full rollout.
B	Inverted operation	Reverses the order of test then scale.
C	Absolute language	No change is risk-free; piloting manages risk.
D	Camouflage	Cost savings do not decide readiness.

6. Answer B Concept 5

Six weeks into a new medication-safety module, the team checks whether each section taught all four scheduled labs and used the required checklists. Exam results are not yet in. ~~The team meets in a newly painted conference room.~~ What type of evaluation is this?

Target word: evaluation type **Decides:** Checking delivery as designed.

A	Dropped element	Ignores that delivery can be evaluated before results.
B	Correct	Fidelity and delivery checks are process evaluation.
C	Confusion set	Outcome evaluation measures results, not delivery.
D	Adjacent category	Collecting data does not make it an end judgment.

7. Answer D Concept 6

A capstone report on a new delirium-care curriculum lists: 12 workshops held, 180 nurses attended, and a 40% drop in unrecognized delirium on audited charts. ~~The workshops were catered by a local cafe.~~ Which item is an outcome?

Target word: identify the outcome **Decides:** Outcome = change in practice or patients.

A	Adjacent category	Attendance is an output, not a change.
B	Camouflage	A resource detail, not an outcome.
C	Confusion set	A count of activity delivered is an output.
D	Correct	A change in practice results is an outcome.

8. Answer A Concept 6 • transfer

In a logic model, faculty time and simulation equipment are listed for a new course. Where do they belong?

Target word: place a resource in the model **Decides:** Resources used to run the program.

A	Correct	Resources invested in the program are inputs.
B	Adjacent category	Activities are what is done with inputs, not the resources themselves.
C	Inverted operation	Outcomes are changes produced, the far end of the chain.
D	Confusion set	Outputs are counts of what was delivered.

9. Answer B Concept 7

A program's SWOT lists: faculty with strong simulation skills, a new state rule capping clinical placements, a partner hospital opening a new wing, and aging lab equipment. ~~The program's mascot is a heron.~~ Which is a threat?

Target word: classify a factor **Decides:** External and harmful.

A	Confusion set	Internal and harmful: a weakness.
B	Correct	An outside factor that could harm the program is a threat.
C	Adjacent category	Internal and helpful: a strength.
D	Inverted operation	External but helpful: an opportunity.

10. Answer D Concept 7 • transfer

A program lists its own high faculty turnover in a SWOT. Which quadrant is correct?

Target word: quadrant for an internal problem **Decides:** Internal and harmful.

A	Confusion set	Threats are external.
B	Inverted operation	Opportunities are external and helpful.
C	Absolute language	Internal staffing problems belong in weaknesses.
D	Correct	Turnover within the program is internal and harmful.

11. Answer C Concept 8

After a curriculum change, a program's first-time licensure pass rate rose from 80% to 88%. ~~The cohort was the largest in school history.~~ By what percent did the pass rate increase?

Target word: percent change **Decides:** $(88 - 80) / 80$.

A	Inverted operation	Divides by the new rate (8 / 88) instead of the starting rate.
B	Wrong stem number	The new rate itself.
C	Correct	$8 \text{ points} / 80 = 0.10$.
D	Confusion set	That is the change in percentage points, not percent change.

12. Answer C Concept 8 • transfer

A program's retention rate rose by 5% from a starting rate of 60%. What is the new rate?

Target word: solve for new rate **Decides:** 5% of 60 is 3 points.

A	Confusion set	Treats a 5% increase as 5 percentage points.
B	Wrong stem number	The change, not the new rate.
C	Correct	$60 \times 1.05 = 63$.
D	Inverted operation	Subtracts instead of adds.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	5	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	9	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	9	
Camouflage	Answers a stem fact that was never the question.	4	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Kirkpatrick's four levels	Level 1 reaction, level 2 learning, level 3 behavior on the job, level 4 results for the organization or patients.	Treating satisfaction surveys as proof of learning or results.	"What level does this measure?" with a named data source.
2	Lewin's change stages	Unfreeze (create readiness), change (move to the new way), refreeze (make it stick with supports and policy).	Launching the change before people see a reason to leave the old way.	Staff unaware of or unconvinced about the problem.
3	Diffusion of innovations	Adoption spreads through innovators, early adopters, early majority, late majority, and laggards; early adopters and opinion leaders carry it.	Aiming first at the most resistant group.	"Whom should the project team recruit first?"
4	Pilot before full rollout	A small, time-limited pilot tests feasibility and surfaces problems before scaling.	Rolling out program-wide to save time.	A new curriculum change with untested logistics.
5	Process vs. outcome evaluation	Process evaluation checks whether the plan was delivered as intended; outcome evaluation checks whether it achieved its goals.	Judging a program's effect before confirming it was delivered as designed.	Questions about fidelity, attendance, or delivery vs. results.
6	Logic model: outputs vs. outcomes	Inputs feed activities, which produce outputs (counts of what was done), which lead to outcomes (changes in learners or patients).	Reporting outputs such as sessions held as if they were outcomes.	A number of sessions, modules, or attendees offered as evidence of success.
7	SWOT: internal vs. external	Strengths and weaknesses are internal to the program; opportunities and threats come from the outside environment.	Listing an outside factor, such as a new regulation, as a weakness.	Classify a factor as inside or outside the program's control.
8	Percentage points vs. percent change	The difference between two rates is in percentage points; percent change divides that difference by the starting rate.	Calling an 8-point rise an 8% increase.	Two rates reported before and after a change.

Course scope (public description): The Nursing Education Capstone course provides the Nurse Educator student an opportunity to apply previous course work towards the completion of an evidence-based curriculum proposal project. During this course students will build on previous work during their Nursing Education Field Experience course by planning the implementation and evaluation phases of their proposed curriculum change. The capstone project represents a synthesis of competencies across the Master of Science in Nursing—Nursing Education degree program, which prepares them to lead, manage, and transform nursing education in diverse and complex settings. This course is eligible for an in-progress grade. Please see the grading scale policy for more information.
