Nursing Education Field Experience

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A nursing program with a new simulation center and a well-liked dean wants to add a course. Faculty favor a course on wound care because the lead instructor recently earned a certificate in it. Clinical partner surveys and first-year NCLEX data show new graduates struggle most with prioritizing care for several patients at once. What should the need-gap statement focus on?

- A. Raising NCLEX pass rates to 100% within one year.
- B. Adding wound care content, since an expert is available to teach it.
- C. The difference between expected and actual graduate skill in prioritizing care for several patients.
- D. Expanding use of the new simulation center.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

Faculty at a large rural campus with an active student nurses' association are revising a pharmacology module that has run for six years. Which objective is written in measurable form?

- A. The instructor will cover pediatric dosing in two lectures.
- B. Given a case study, the student will calculate a weight-based pediatric dose with 100% accuracy.
- C. The student will understand safe pediatric dosing.
- D. The student will appreciate the importance of medication safety.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3. [TRANSFER — reversed stem / different variable]

An objective reads: The student will list the five rights of delegation. Which assessment matches its Bloom's level?

- A. A short-answer item asking the student to name the five rights.
- B. Any assessment works as long as it is graded.
- C. A simulation where the student delegates tasks for six patients.
- D. A reflective journal on delegation experiences.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A course objective states that students will analyze telemetry strips to identify rhythm changes. The course is taught in a hybrid format and 40 students are enrolled. The final exam uses only items asking students to define terms such as sinus rhythm. What is the main design problem?

- A. The exam tests recall, below the analyze level the objective requires.
- B. Forty students is too many for a valid exam.
- C. The objective should be rewritten to say understand.
- D. Definitions are always the best way to assess clinical skills.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

A course on patient teaching has an objective that students will create a discharge teaching plan for a patient with low health literacy. Students rated last term's guest lecture on hospital history very highly. The only graded work is a multiple-choice exam on teaching theory. Which change best improves alignment?

- A. Add more multiple-choice items on teaching theory.
- B. Remove the objective so the exam matches the course.
- C. Add a graded assignment where students build and justify a teaching plan for a case patient.
- D. Keep the guest lecture, since students enjoyed it.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

Midway through a clinical course, an instructor gives a brief ungraded quiz, reviews the results with the class, and adjusts next week's lab on insulin mixing. The quiz was built in a free online tool and took ten minutes. What kind of assessment is this?

- A. Not an assessment, because it was ungraded.
- B. Norm-referenced, because results were compared across the class.
- C. Summative, because it is a quiz.
- D. Formative, because results guide teaching while learning is under way.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7. [TRANSFER — reversed stem / different variable]

A program wants a tool whose results decide whether each student has met course competencies at the end of the term. Which choice fits that purpose?

- A.** An ungraded practice quiz in week 3.
- B.** A summative skills check-off scored against a rubric.
- C.** A weekly minute paper on the muddiest point.
- D.** A pre-course survey of learning preferences.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

A school uses a 60-item dosage exam that has been given for five years in a bright new testing lab. Scores are nearly identical when the same students retake it a week later. Faculty notice the items mostly test reading speed rather than dosage math. What best describes the exam?

- A.** Neither reliable nor valid.
- B.** Reliable but not valid for measuring dosage skill.
- C.** Valid because the scores are consistent.
- D.** Valid because it has been used for five years.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9. [TRANSFER — reversed stem / different variable]

Two raters score the same student care plans with a new rubric and agree on almost every score. Which conclusion about the rubric follows from this fact alone?

- A.** It proves the rubric is valid.
- B.** It proves students have mastered care planning.
- C.** It shows the rubric is unreliable.
- D.** It shows good inter-rater reliability; validity still needs separate evidence.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A 50-item final covers three units weighted 40% cardiac, 36% respiratory, and 24% renal. The cardiac unit was taught by a nationally known guest lecturer. How many items should cover respiratory content?

- A.** 16 items, so cardiac can get extra for the guest lecturer
- B.** 20 items
- C.** 36 items
- D.** 18 items

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

11. [TRANSFER — reversed stem / different variable]

A 40-item exam blueprint assigns 10 items to infection control. What weight does the blueprint give that topic?

- A.** 10%
- B.** 40%
- C.** 25%
- D.** 400%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

12.

An orientation course for experienced nurses moving into teaching is taught entirely as lectures on basic anatomy. The nurses average 12 years of practice and the room is a newly renovated auditorium. Engagement is low. Which redesign best fits adult learning principles?

- A.** Use teaching problems the nurses will face and let them draw on their clinical experience.
- B.** Add more anatomy lectures so no content is missed.
- C.** Move the lectures to a smaller room.
- D.** Adults always prefer self-paced online modules.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

A nursing program ~~with a new simulation center and a well-liked dean~~ wants to add a course. Faculty favor a course on wound care ~~because the lead instructor recently earned a certificate in it~~. Clinical partner surveys and first-year NCLEX data show new graduates struggle most with prioritizing care for several patients at once. What should the need-gap statement focus on?

Target word: what the gap is **Decides:** Partner surveys and licensure data point to prioritization of multiple patients.

A	Absolute language	A goal stated in absolute terms is not a gap statement and ignores the specific skill deficit.
B	Camouflage	Answers the instructor's certificate, which is a resource, not evidence of a gap.
C	Correct	Evidence from partners and exam data defines the gap between current and desired performance.
D	Dropped element	Names a method without stating the performance gap it would close.

2. Answer B Concept 2

Faculty ~~at a large rural campus with an active student nurses' association~~ are revising a pharmacology module ~~that has run for six years~~. Which objective is written in measurable form?

Target word: measurable objective **Decides:** An observable verb plus condition and standard.

A	Inverted operation	Describes what the teacher does, not what the learner will do.
B	Correct	Names an observable action, the condition, and the standard of performance.
C	Confusion set	Understand cannot be observed or measured.
D	Adjacent category	An affective aim with no observable behavior or criterion.

3. Answer A Concept 2 • transfer

An objective reads: The student will list the five rights of delegation. Which assessment matches its Bloom's level?

Target word: match assessment to a given objective **Decides:** List is a remember-level verb.

A	Correct	A recall task matches a remember-level objective.
B	Absolute language	Assessment method must fit the objective's level.
C	Inverted operation	Assesses application, above what the objective asks.
D	Adjacent category	Targets affective reflection, not recall of the list.

4. Answer A Concept 3

A course objective states that students will analyze telemetry strips to identify rhythm changes. ~~The course is taught in a hybrid format and 40 students are enrolled~~. The final exam uses only items asking students to define terms such as sinus rhythm. What is the main design problem?

Target word: design flaw **Decides:** Analyze-level objective tested with remember-level items.

A	Correct	The assessment must reach the cognitive level named in the objective.
B	Camouflage	Class size does not decide the level mismatch.
C	Confusion set	Understand is not measurable and would weaken the objective.
D	Absolute language	Overstated, and wrong for an analyze-level objective.

5. Answer C Concept 4

A course on patient teaching has an objective that students will create a discharge teaching plan for a patient with low health literacy. ~~Students rated last term's guest lecture on hospital history very highly.~~ The only graded work is a multiple-choice exam on teaching theory. Which change best improves alignment?

Target word: best alignment fix **Decides:** The objective asks for a created plan; nothing in the course has students make one.

A	Inverted operation	Deepens the existing mismatch instead of fixing it.
B	Dropped element	Drops the intended outcome rather than aligning to it.
C	Correct	Makes the assessment and practice match the create-level objective.
D	Camouflage	Popularity does not serve the stated objective.

6. Answer D Concept 5

Midway through a clinical course, an instructor gives a brief ungraded quiz, reviews the results with the class, and adjusts next week's lab on insulin mixing. ~~The quiz was built in a free online tool and took ten minutes.~~ What kind of assessment is this?

Target word: type of assessment **Decides:** Given during learning; results used to adjust teaching.

A	Absolute language	Ungraded checks are still assessment.
B	Adjacent category	Describes a scoring frame, not purpose and timing.
C	Confusion set	Labels by format; summative judges achievement at the end.
D	Correct	Timing and purpose, not format, make it formative.

7. Answer B Concept 5 • transfer

A program wants a tool whose results decide whether each student has met course competencies at the end of the term. Which choice fits that purpose?

Target word: pick tool for an end-of-course decision **Decides:** End-of-course judgment of achievement.

A	Wrong stem number	Early timing makes it formative.
B	Correct	Judges achievement at the end for a decision.
C	Inverted operation	Formative: gathers feedback during learning.
D	Adjacent category	Collects learner data, not evidence of competence.

8. Answer B Concept 6

A school uses a 60-item dosage exam ~~that has been given for five years in a bright new testing lab.~~ Scores are nearly identical when the same students retake it a week later. Faculty notice the items mostly test reading speed rather than dosage math. What best describes the exam?

Target word: reliability vs. validity **Decides:** Consistent scores but measuring the wrong construct.

A	Dropped element	Ignores the stable retest scores.
B	Correct	Consistent retest scores show reliability; measuring reading speed undermines validity.
C	Inverted operation	Consistency is reliability; it does not prove validity.
D	Camouflage	Length of use does not establish what a test measures.

9. Answer D Concept 6 • transfer

Two raters score the same student care plans with a new rubric and agree on almost every score. Which conclusion about the rubric follows from this fact alone?

Target word: what agreement shows **Decides:** High inter-rater agreement is evidence of reliability only.

A	Confusion set	Confuses reliability with validity.
B	Adjacent category	Rater agreement says nothing about student mastery.
C	Inverted operation	Agreement is evidence for, not against, reliability.
D	Correct	Agreement shows consistency, not that the rubric measures the intended skill.

10. Answer D Concept 7

A 50-item final covers three units weighted 40% cardiac, 36% respiratory, and 24% renal. ~~The cardiac unit was taught by a nationally known guest lecturer.~~ How many items should cover respiratory content?

Target word: respiratory item count **Decides:** $50 \times 36\%$.

A	Camouflage	The lecturer does not change the blueprint weight.
B	Confusion set	That is the cardiac count, 50×0.40 .
C	Wrong stem number	Uses the percentage as the item count.
D	Correct	$50 \times 0.36 = 18$; cardiac gets 20 and renal 12, totaling 50.

11. Answer C Concept 7 • transfer

A 40-item exam blueprint assigns 10 items to infection control. What weight does the blueprint give that topic?

Target word: solve for weight **Decides:** 10 of 40 items.

A	Dropped element	Treats the item count as the percent without dividing.
B	Wrong stem number	Uses the total item count as the percent.
C	Correct	$10 / 40 = 0.25$.
D	Inverted operation	Multiplies 40 by 10 instead of dividing.

12. Answer A Concept 8

An orientation course for experienced nurses moving into teaching is taught entirely as lectures on basic anatomy. The nurses average 12 years of practice and ~~the room is a newly renovated auditorium.~~ Engagement is low. Which redesign best fits adult learning principles?

Target word: adult learning fit **Decides:** Experienced, self-directed learners need relevant, problem-centered tasks.

A	Correct	Relevance, experience, and problem-centered learning fit adult learners.
B	Inverted operation	Increases passive, irrelevant content.
C	Camouflage	The room is not why the design fails.
D	Absolute language	Overgeneralizes; the principle is relevance and self-direction, not one format.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	4	
Wrong stem number	A figure copied from the prompt that is not the answer.	3	
Adjacent category	The right idea in the wrong bucket.	5	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	8	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	5	
Camouflage	Answers a stem fact that was never the question.	6	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Need-gap analysis	The gap is the distance between the desired state and the current state, shown with data before any solution is chosen.	Starting from a favorite solution and calling it the need.	A proposal that names a fix before it names evidence of a gap.
2	Measurable learning objectives	A usable objective names who, an observable action verb, the condition, and the standard of performance.	Using verbs like understand, know, or appreciate that cannot be observed.	"Which objective is written correctly?"
3	Bloom's level matching	The cognitive level of the objective sets the level the activity and the assessment must reach.	Testing an apply- or analyze-level objective with recall questions.	An objective verb and an assessment method that sit at different levels.
4	Constructive alignment	Objectives, learning activities, and assessments must point at the same outcome; a mismatch in any one breaks the course.	Treating a popular activity as good design even when it does not serve an objective.	"Which change best improves alignment?"
5	Formative vs. summative assessment	Formative assessment happens during learning to guide improvement; summative assessment happens at the end to judge achievement.	Labeling assessment by format (quiz, exam) instead of by purpose and timing.	Whether results feed back into learning or into a final grade or decision.
6	Reliability vs. validity	Reliability is consistency of scores; validity is whether the tool measures what it claims. A tool can be reliable without being valid.	Assuming consistent scores prove the test measures the right thing.	Stable scores paired with doubt about what the test actually measures.
7	Test blueprint	The share of items on each topic should match that topic's weight in the objectives.	Writing items in proportion to what is easiest to test.	Topic weights given as percentages alongside a total item count.
8	Adult learning principles	Adult learners are self-directed, draw on experience, and learn best from relevant, problem-centered tasks.	Treating adult learners as passive receivers of lecture content.	Experienced learners disengaged by content they see as irrelevant.

Course scope (public description): The Nursing Education Field Experience provides the academic nurse educator student an opportunity to work collaboratively with academic mentors and interprofessional stakeholders to analyze the need-gap for a curriculum change, innovation, or improvement. Based on the identified need-gap, the graduate student will design and develop a course that reflects evidence-based instructional design and assessment principles and practices. This course prepares students for the role of an Academic Nurse Educator, as an agent for change and quality improvement in nursing education.
