Program Evaluation

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

A nutrition program at a food bank that recently moved to a larger warehouse reports that it held 48 cooking classes this year. In the program's logic model, what is this figure?

- A. An output.
- B. An activity.
- C. An input.
- D. An outcome.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Which item belongs in a logic model as a short-term outcome?

- A. 300 people attended at least one class.
- B. Participants can correctly read a nutrition label after the course.
- C. A grant funds two dietitians.
- D. County diabetes rates fall over ten years.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

An evaluator for a school asthma program in a district of 18 schools, which recently adopted a new bell schedule, wants to know whether each session was delivered as designed and how many students attended. What type of evaluation is this?

- A. Outcome evaluation.
- B. An evaluation of the new bell schedule.
- C. Process evaluation.
- D. Impact evaluation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

An evaluator compares asthma-related emergency visits among participating students before and after the program. What type of evaluation question is this?

- A.** Outcome.
- B.** Needs assessment.
- C.** Cost analysis.
- D.** Process.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

Before launching a statewide text-message quit-smoking program, a team led by a newly hired communications director tests draft messages with 20 smokers and revises them based on feedback. What kind of evaluation is this?

- A.** Outcome evaluation.
- B.** Not evaluation, since the program has not started.
- C.** Formative evaluation.
- D.** Summative evaluation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

At the end of a five-year program, the funder commissions a review of its overall results to decide whether to renew funding. What kind of evaluation is this?

- A.** Formative evaluation.
- B.** Process evaluation only.
- C.** Summative evaluation.
- D.** A needs assessment.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A county is beginning to evaluate its overdose prevention program, which is funded by a three-year state grant. Using the CDC framework, what should it do first?

- A.** Set the evaluation to match the three-year grant cycle.
- B.** Justify conclusions from the data.
- C.** Gather credible evidence through surveys and records.
- D.** Engage stakeholders, such as people served, partners, and funders.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8.

Survey data show attendance at a walking program fell 30% after it moved to a church hall with a new parking lot. The team wants to understand why participants stopped coming. Which method fits best?

- A. Assume the parking lot caused the drop.
- B. Recalculate the 30% drop using attendance logs.
- C. Repeat the same closed-ended survey with more people.
- D. Focus groups or interviews with former participants.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A vaccine outreach program in a county with 12 fire stations targets 8,000 eligible adults. So far, 2,000 have been vaccinated through the program, at a cost of \$60,000. What is the program's reach?

- A. \$30 per person
- B. 2,000
- C. 75%
- D. 25%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

A program aims to reach 40% of 8,000 eligible adults. It has served 2,000 so far. How many more must it serve to meet the target?

- A. 1,200
- B. 800
- C. 6,000
- D. 3,200

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

After a year-long workplace wellness program at a company that hired a new CEO, employees' average body weight fell 2%. Over the same period, a similar company without the program also saw a 2% drop. What can the evaluator conclude?

- A.** The new CEO caused the drop.
- B.** There is no evidence the program caused change beyond the background trend.
- C.** The program caused the 2% drop.
- D.** The program caused a 4% drop.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

Evaluators of a community diabetes program, funded by a hospital foundation, have a 60-page technical report. They now need to share findings with the residents who took part. What is the best approach?

- A.** Mail every resident the 60-page technical report.
- B.** A short plain-language summary with visuals, shared at community meetings and through local channels.
- C.** Publish only in a peer-reviewed journal.
- D.** Share results only with the foundation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A nutrition program at a food bank ~~that recently moved to a larger warehouse~~ reports that it held 48 cooking classes this year. In the program's logic model, what is this figure?

Target word: logic model component **Decides:** A count of what the program delivered.

A	Correct	Countable products of activities are outputs.
B	Adjacent category	Teaching classes is the activity; the count of classes held is the output.
C	Inverted operation	Inputs are resources at the start of the chain, such as staff and funding.
D	Confusion set	Outcomes are changes in participants, not counts of classes.

2. Answer B Concept 1 • transfer

Which item belongs in a logic model as a short-term outcome?

Target word: identify short-term outcome **Decides:** An early change in participants.

A	Confusion set	Attendance is an output.
B	Correct	A change in knowledge or skill soon after the program.
C	Inverted operation	Resources are inputs.
D	Adjacent category	A long-term outcome or impact.

3. Answer C Concept 2

An evaluator for a school asthma program in a district of 18 schools, ~~which recently adopted a new bell schedule,~~ wants to know whether each session was delivered as designed and how many students attended. What type of evaluation is this?

Target word: evaluation type **Decides:** Questions about delivery and attendance.

A	Adjacent category	Outcome evaluation asks whether students' asthma control changed.
B	Camouflage	The schedule is background, not the subject.
C	Correct	Fidelity and reach are process questions.
D	Confusion set	Impact looks at long-term population change.

4. Answer A Concept 2 • transfer

An evaluator compares asthma-related emergency visits among participating students before and after the program. What type of evaluation question is this?

Target word: evaluation type **Decides:** Measures change in participants' health.

A	Correct	A change in participants' health status is an outcome.
B	Adjacent category	Needs assessment comes before a program to define the problem.
C	Confusion set	Cost analysis compares dollars, not health change alone.
D	Inverted operation	Process asks about delivery, not results.

5. Answer C Concept 3

Before launching a statewide text-message quit-smoking program, a team ~~led by a newly hired communications director~~ tests draft messages with 20 smokers and revises them based on feedback. What kind of evaluation is this?

Target word: formative or summative **Decides:** Testing drafts to improve the program.

A	Adjacent category	No quit rates are being measured.
B	Absolute language	Evaluation can and should begin before launch.
C	Correct	Gathering feedback to shape a program in development is formative.
D	Inverted operation	Summative judges a finished program's overall merit.

6. Answer C Concept 3 · transfer

At the end of a five-year program, the funder commissions a review of its overall results to decide whether to renew funding. What kind of evaluation is this?

Target word: formative or summative **Decides:** Judging overall merit at the end for a funding decision.

A	Inverted operation	Formative evaluation improves a program while it is developing.
B	Dropped element	Leaves out the judgment of results that drives the renewal decision.
C	Correct	An end-of-program judgment of overall merit is summative.
D	Adjacent category	Needs assessment defines the problem before a program starts.

7. Answer D Concept 4

A county is beginning to evaluate its overdose prevention program, ~~which is funded by a three-year state grant~~. Using the CDC framework, what should it do first?

Target word: first step **Decides:** The framework begins with stakeholders.

A	Camouflage	The grant length does not decide the first step.
B	Inverted operation	Step 5, near the end.
C	Dropped element	Step 4; skips the steps that shape what evidence to collect.
D	Correct	Step 1 is engaging stakeholders.

8. Answer D Concept 5

Survey data show attendance at a walking program fell 30% after it moved to a church hall ~~with a new parking lot~~. The team wants to understand why participants stopped coming. Which method fits best?

Target word: method for a why question **Decides:** The team needs reasons, not counts.

A	Camouflage	Guesses from a background detail without asking.
B	Confusion set	Confirms the size, not the reasons.
C	Dropped element	More counts do not explain why.
D	Correct	Qualitative methods uncover reasons and context.

9. Answer D Concept 6

A vaccine outreach program ~~in a county with 12 fire stations~~ targets 8,000 eligible adults. So far, 2,000 have been vaccinated through the program, at a cost of \$60,000. What is the program's reach?

Target word: reach **Decides:** 2,000 served out of 8,000 eligible.

A	Adjacent category	\$60,000 / 2,000 is cost per person, an efficiency measure.
B	Wrong stem number	The count served, not reach as a share of eligible.
C	Inverted operation	The share not yet reached.
D	Correct	2,000 / 8,000 = 25%.

10. Answer A Concept 6 · transfer

A program aims to reach 40% of 8,000 eligible adults. It has served 2,000 so far. How many more must it serve to meet the target?

Target word: solve for additional people **Decides:** $0.40 \times 8,000 - 2,000$.

A	Correct	Target is 3,200; $3,200 - 2,000 = 1,200$.
B	Inverted operation	Takes 40% of those served instead of the eligible population.
C	Confusion set	Everyone not yet served, not the gap to 40%.
D	Dropped element	The full target, ignoring those already served.

11. Answer B Concept 7

After a year-long workplace wellness program at a company ~~that hired a new CEO~~, employees' average body weight fell 2%. Over the same period, a similar company without the program also saw a 2% drop. What can the evaluator conclude?

Target word: attribution **Decides:** The comparison group changed the same amount.

A	Camouflage	Nothing links the CEO to weight change.
B	Correct	Program effect = participant change – comparison change = 0.
C	Dropped element	Ignores the comparison group.
D	Inverted operation	Adds the comparison change instead of subtracting it.

12. Answer B Concept 8

Evaluators of a community diabetes program, ~~funded by a hospital foundation~~, have a 60-page technical report. They now need to share findings with the residents who took part. What is the best approach?

Target word: dissemination to a lay audience **Decides:** Audience is community residents.

A	Confusion set	Right content, wrong format for a lay audience.
B	Correct	Matches format and channel to the audience.
C	Adjacent category	Reaches researchers, not participants.
D	Camouflage	The funder is one audience, not the one named.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	5	
Wrong stem number	A figure copied from the prompt that is not the answer.	1	
Adjacent category	The right idea in the wrong bucket.	8	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	9	
Absolute language	Always, never, guarantee — where judgment applies.	1	
Confusion set	Every option is real; the test is exact role-matching.	7	
Camouflage	Answers a stem fact that was never the question.	5	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Logic model components	Inputs (resources) → activities (what the program does) → outputs (countable products such as sessions held or people reached) → outcomes (changes in participants, short to long term) → impact.	Calling a count of sessions or attendees an outcome.	A number describing delivery vs. a change in people.
2	Process vs. outcome evaluation	Process evaluation asks whether the program was delivered as planned and to whom; outcome evaluation asks whether participants changed.	Treating attendance and fidelity data as proof of effect.	"Was it delivered?" vs. "Did it work?"
3	Formative vs. summative evaluation	Formative evaluation improves a program while it is being developed or run; summative evaluation judges its overall merit at the end.	Thinking evaluation only happens after a program ends.	Testing drafts or early versions to revise them.
4	CDC evaluation framework	Six steps in order: engage stakeholders, describe the program, focus the design, gather credible evidence, justify conclusions, ensure use and share lessons.	Jumping straight to data collection.	"What is the first step?"
5	Choosing qualitative or quantitative data	Quantitative data show how much or how many; qualitative data explain why and how, so mixed methods pair them.	Running more of the same survey to answer a why question.	The numbers are known and the team wants reasons.
6	Reach as a process metric	Reach = people served ÷ eligible population; to hit a reach target, needed = target % × eligible – already served.	Confusing reach with cost per person or the unreached share.	An eligible population and a count served.
7	Attribution needs a comparison	A program's effect is the change in participants beyond what a comparable group without the program shows.	Crediting the program with any before-after change.	A similar group changed by the same amount.
8	Tailored dissemination	Share results in the format, length, and channel each audience can use; communities need short plain-language summaries.	Sending the same technical report to everyone.	A lay audience and a long technical report.

Course scope (public description): Program Evaluation familiarizes learners with approaches to evaluating an evidence-informed health program or intervention implemented in a public health setting. Topics include logic models and evaluation frameworks; process and outcome metrics for evaluating programs; qualitative and quantitative approaches to collecting data; and dissemination strategies for the results of program evaluation.
