Program Planning and Implementation

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A coalition in a county that recently built a new library is assessing teen vaping. It reviews results from the statewide youth risk survey and county emergency-department data, then runs its own focus groups with 40 local teens. Which of these are primary data?

- A. The focus groups.
- B. All three, since the coalition is using them.
- C. The statewide youth risk survey.
- D. The county emergency-department data.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

A health educator at a tribal health clinic, which just received a new outreach van, is writing plans for a diabetes program. Which statement is a goal rather than an objective or activity?

- A. Reduce the burden of type 2 diabetes in the community.
- B. By June 2027, 60% of participants will lower their A1C by at least 0.5 points.
- C. Hold 12 cooking classes.
- D. Use the new van for outreach.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

In a rural county that recently hosted the state fair, 40% of adults aged 45 to 75 are up to date on colorectal cancer screening. The objective is to raise this rate by 25% (relative) by December 2028. What target rate should the objective state?

- A. 65%
- B. 25%
- C. 50%
- D. 30%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

An objective reads: By December 2027, increase the share of clinic patients with controlled blood pressure from 55% to 66%. What relative increase does this represent?

- A.** 66%
- B.** 20%
- C.** 11%
- D.** About 16.7%

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

Women at a food-processing plant with a new on-site gym tell planners they know mammograms are important and that breast cancer is serious, but they cannot take unpaid time off for appointments. Which Health Belief Model construct should the program target?

- A.** Perceived severity.
- B.** Cues to action, since reminders alone will fix it.
- C.** Perceived barriers.
- D.** Perceived susceptibility.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

A clinic sends a text message the day before a scheduled screening. Which Health Belief Model construct does this represent?

- A.** Perceived barriers.
- B.** Cues to action.
- C.** None; reminders are outside the model.
- D.** Self-efficacy.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

At a community health fair, a smoker who works nights as a security guard says he plans to quit within the next month and has already bought nicotine patches. Which stage of change is he in?

- A. Contemplation.
- B. Precontemplation.
- C. Preparation.
- D. Action.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

A client has been walking 30 minutes a day for the past three months after years of inactivity. Which stage is she in, and what should the program focus on?

- A. Preparation; focus on setting a start date.
- B. Maintenance; focus only on celebrating success.
- C. She has finished changing and needs no further support.
- D. Action; focus on preventing relapse and building support.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

Many participants at a senior center, several of whom recently moved into a new housing complex, doubt they can safely do strength exercises. Which strategy best applies social cognitive theory?

- A. Lecture on the risks of muscle loss.
- B. Start with short, guided exercises they can succeed at, and pair them with peers of similar age who model the moves.
- C. Tour the gym at the new housing complex.
- D. Tell them strength exercise is always safe for everyone.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

Planning a hand-washing program at a food plant that recently won a regional quality award, staff find workers know why hand-washing matters, but the nearest sink is far from the production line, and supervisors never comment on compliance. How is the distant sink classified in PRECEDE-PROCEED?

- A.** A reinforcing factor.
- B.** A predisposing factor.
- C.** A quality factor, given the award.
- D.** An enabling factor.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11. [TRANSFER — reversed stem / different variable]

In the same plan, supervisors begin praising workers who wash their hands at the start of each shift. What kind of factor is the praise?

- A.** Reinforcing.
- B.** Enabling.
- C.** Predisposing.
- D.** Not a factor, because praise costs nothing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

A county plans to deliver an evidence-based diabetes prevention program with 16 core sessions. The local coordinator, who is also a certified yoga instructor, wants to cut it to 6 sessions and replace the curriculum with yoga. What is best practice?

- A.** Adopt the coordinator's yoga version.
- B.** Deliver it with no changes at all, even to language.
- C.** Cut to 6 sessions, since shorter programs are more convenient.
- D.** Keep the core sessions and content, adapt surface features such as language and examples, and pilot test.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer A Concept 1

A coalition in a county ~~that recently built a new library~~ is assessing teen vaping. It reviews results from the statewide youth risk survey and county emergency-department data, then runs its own focus groups with 40 local teens. Which of these are primary data?

Target word: primary data **Decides:** Who collected the data.

A	Correct	The coalition collected them for this assessment.
B	Absolute language	Use does not make data primary; collection does.
C	Confusion set	Collected by the state for its own purposes: secondary.
D	Adjacent category	Existing records collected by others: secondary.

2. Answer A Concept 2

A health educator at a tribal health clinic, ~~which just received a new outreach van~~, is writing plans for a diabetes program. Which statement is a goal rather than an objective or activity?

Target word: identify the goal **Decides:** Broad, long-term, not measurable as written.

A	Correct	A broad aim without a number or date is a goal.
B	Confusion set	Specific and measurable: an objective.
C	Adjacent category	A task the program does: an activity.
D	Camouflage	Reacts to the van detail; it is a task, not a goal.

3. Answer C Concept 3

In a rural county ~~that recently hosted the state fair~~, 40% of adults aged 45 to 75 are up to date on colorectal cancer screening. The objective is to raise this rate by 25% (relative) by December 2028. What target rate should the objective state?

Target word: target rate **Decides:** Relative increase: $40\% \times 1.25$.

A	Confusion set	Adds 25 percentage points instead of a 25% relative increase.
B	Wrong stem number	The percent change, not the target.
C	Correct	$40\% \times 1.25 = 50\%$.
D	Inverted operation	Reduces the rate by 25%.

4. Answer B Concept 3 • transfer

An objective reads: By December 2027, increase the share of clinic patients with controlled blood pressure from 55% to 66%. What relative increase does this represent?

Target word: solve for relative change **Decides:** $(66 - 55) / 55$.

A	Wrong stem number	The target rate itself.
B	Correct	$11 / 55 = 0.20$.
C	Confusion set	That is the change in percentage points, not relative change.
D	Inverted operation	Divides by the target (66) instead of the baseline.

5. Answer C Concept 4

Women at a food-processing plant ~~with a new on-site gym~~ tell planners they know mammograms are important and that breast cancer is serious, but they cannot take unpaid time off for appointments. Which Health Belief Model construct should the program target?

Target word: construct to target **Decides:** They accept risk and severity; the obstacle is time off.

A	Confusion set	They already say the disease is serious.
B	Dropped element	Reminders do not remove the time-off barrier.
C	Correct	The stated obstacle is a barrier; e.g., a mobile unit on site during shifts.
D	Adjacent category	They already accept the risk.

6. Answer B Concept 4 • transfer

A clinic sends a text message the day before a scheduled screening. Which Health Belief Model construct does this represent?

Target word: classify the strategy **Decides:** A prompt that triggers action.

A	Adjacent category	A text does not remove an obstacle.
B	Correct	Reminders and prompts are cues to action.
C	Absolute language	Cues to action are a named construct.
D	Confusion set	Self-efficacy is confidence in one's ability, not a prompt.

7. Answer C Concept 5

At a community health fair, a smoker ~~who works nights as a security guard~~ says he plans to quit within the next month and has already bought nicotine patches. Which stage of change is he in?

Target word: stage **Decides:** Intends within 30 days and has taken a step.

A	Adjacent category	Contemplation is intending within six months without concrete steps.
B	Inverted operation	Precontemplation means no intention to change.
C	Correct	Plans to act within a month and has taken a concrete step.
D	Confusion set	He has not stopped smoking yet.

8. Answer D Concept 5 • transfer

A client has been walking 30 minutes a day for the past three months after years of inactivity. Which stage is she in, and what should the program focus on?

Target word: stage and focus **Decides:** Behavior changed less than 6 months ago.

A	Confusion set	She has already started.
B	Adjacent category	Maintenance begins at six months.
C	Absolute language	Early change is fragile.
D	Correct	Changed under six months ago is action; relapse risk is high.

9. Answer B Concept 6

Many participants at a senior center, ~~several of whom recently moved into a new housing complex~~, doubt they can safely do strength exercises. Which strategy best applies social cognitive theory?

Target word: best self-efficacy strategy **Decides:** Low confidence in ability.

A	Adjacent category	Raises perceived severity, not confidence.
B	Correct	Mastery and modeling are the strongest sources of self-efficacy.
C	Camouflage	A tour gives no success experience.
D	Absolute language	Untrue blanket reassurance; builds no skill.

10. Answer D Concept 7

Planning a hand-washing program at a food plant ~~that recently won a regional quality award~~, staff find workers know why hand-washing matters, but the nearest sink is far from the production line, and supervisors never comment on compliance. How is the distant sink classified in PRECEDE-PROCEED?

Target word: classify the sink location **Decides:** A lack of access or resources.

A	Confusion set	Reinforcing factors are feedback and rewards, like supervisor comments.
B	Adjacent category	Predisposing factors are knowledge and attitudes.
C	Camouflage	Not a model category; the award does not decide classification.
D	Correct	Resources and access that make a behavior possible are enabling.

11. Answer A Concept 7 • transfer

In the same plan, supervisors begin praising workers who wash their hands at the start of each shift. What kind of factor is the praise?

Target word: classify praise **Decides:** Feedback from others after the behavior.

A	Correct	Rewards and feedback from others reinforce behavior.
B	Adjacent category	Enabling factors are resources and skills.
C	Confusion set	Predisposing factors exist before the behavior, like beliefs.
D	Dropped element	Ignores social feedback as an influence.

12. Answer D Concept 8

A county plans to deliver an evidence-based diabetes prevention program with 16 core sessions. The local coordinator, ~~who is also a certified yoga instructor~~, wants to cut it to 6 sessions and replace the curriculum with yoga. What is best practice?

Target word: fidelity vs. adaptation **Decides:** Proposed changes remove core content and dose.

A	Camouflage	Follows the coordinator's background; the new version has no evidence base.
B	Absolute language	Surface adaptation improves fit without harming fidelity.
C	Dropped element	Drops the dose that produced results.
D	Correct	Core components carry the evidence; surface adaptation fits the community.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owled.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	2	
Adjacent category	The right idea in the wrong bucket.	9	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	3	
Absolute language	Always, never, guarantee — where judgment applies.	5	
Confusion set	Every option is real; the test is exact role-matching.	10	
Camouflage	Answers a stem fact that was never the question.	4	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Primary vs. secondary data in needs assessment	Primary data are collected by the planners for this assessment (surveys, focus groups, interviews); secondary data were collected by others (state surveys, hospital records, census).	Calling any data the team uses primary.	Who collected the data and for what purpose.
2	Goals vs. objectives vs. activities	A goal is a broad, long-term aim; an objective is specific and measurable; an activity is a task the program does.	Labeling a measurable target or a task as a goal.	Whether the statement has a number, a date, or a to-do.
3	SMART objective targets	A SMART objective is specific, measurable, achievable, relevant, and time-bound; a relative increase is $\text{baseline} \times (1 + \text{percent})$, not $\text{baseline} + \text{percent points}$.	Adding a relative percent as percentage points.	"Increase by X%" applied to a baseline percentage.
4	Health Belief Model constructs	Action depends on perceived susceptibility, severity, benefits, and barriers, plus cues to action and self-efficacy; target the construct the data show is weak.	Stressing risk when people already accept the risk and face a practical barrier.	People agree it matters but name an obstacle.
5	Stages of change	Precontemplation (no intent in 6 months), contemplation (intends within 6 months), preparation (within 30 days, steps taken), action (changed under 6 months), maintenance (6 months or more).	Placing someone in action because they intend to change.	A time frame plus whether steps have been taken.
6	Social cognitive theory and self-efficacy	Self-efficacy is built most by mastery experiences, then by seeing similar others succeed, persuasion, and managing physical cues.	Trying to build confidence with risk lectures or blanket reassurance.	People doubt they can do the behavior.
7	PRECEDE-PROCEED factors	Predisposing factors are knowledge, attitudes, and beliefs; enabling factors are skills, resources, and access; reinforcing factors are feedback and rewards from others.	Calling a missing resource predisposing or social praise enabling.	A list of influences to classify.
8	Fidelity and adaptation of evidence-based programs	Keep an evidence-based program's core components (content, dose, delivery) and adapt only surface features such as language, examples, and setting; pilot test before full rollout.	Cutting sessions or swapping content, or refusing any adaptation at all.	A proposed change to a proven program.

Course scope (public description): Program Planning and Implementation provides learners with the skills to plan and implement evidenced-based public health programs to address the most important health issues affecting communities. Learners analyze community needs assessments, develop program goals and SMART objectives, apply public health theories and models, and plan the implementation of a health education strategy.
