

D622

Public Health Assessment, Program Planning, Intervention, and Evaluation

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word _____	The one fact that decides _____	Answer _____	[] sure [] unsure [] guess
-----------------------------	---	------------------------	----------------------------------

Items

1.

For a county needs assessment, the team, led by a newly hired planner, pulls obesity rates from the state's BRFSS survey and census poverty data, then runs focus groups with parents at three schools. Which of these is primary data?

- A. The census data, because the team analyzed it.
- B. The BRFSS obesity rates.
- C. The parent focus groups.
- D. All of it, since the team gathered everything.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2.

A draft needs assessment for a neighborhood lists high diabetes, unemployment, crime, and food deserts. The report is 60 pages long with color maps. What key element is missing?

- A. A plan to have outside experts solve each problem.
- B. An inventory of community assets such as churches, leaders, and gardens.
- C. More detail on crime.
- D. Shorter length and fewer maps.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

A coalition scores teen vaping using the Hanlon score $(A + 2B) \times C$: size $A = 6$, seriousness $B = 8$, and effectiveness $C = 5$. The issue was raised by a high school principal at the first meeting. What is the score?

- A. 110
- B. 70
- C. 19
- D. 86

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4. [TRANSFER — reversed stem / different variable]

A problem has size $A = 4$, seriousness $B = 7$, and a Hanlon score $(A + 2B) \times C$ of 144. What is its effectiveness score C ?

- A.** 7
- B.** 8
- C.** 13.1
- D.** 2,592

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5.

Parents in a rural county, where the only hospital recently merged with a larger system, know that car seats save lives and want to use them, but many cannot afford one. Using PRECEDE, what kind of factor is cost?

- A.** Predisposing.
- B.** An organizational factor from the merger.
- C.** Enabling.
- D.** Reinforcing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6. [TRANSFER — reversed stem / different variable]

After new mothers start breastfeeding, their partners and nurses praise them and offer encouragement. Which PRECEDE factor is this?

- A.** Reinforcing.
- B.** An output.
- C.** Enabling.
- D.** Predisposing.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A grant team, meeting in a borrowed conference room, drafts objectives for a colorectal cancer screening program. Which one is SMART?

- A.** Improve screening in the county.
- B.** Hold six screening events.
- C.** Screen 100% of adults by next month.
- D.** By December 2027, raise screening among adults 45–75 in the county from 58% to 68%.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

An objective aims to cut adult smoking by one-fourth from a baseline of 20%. What target prevalence should the objective state?

- A.** 19.75%.
- B.** 25%.
- C.** 15%.
- D.** 5%.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

A nutrition program used a \$75,000 grant and two dietitians to hold 40 cooking workshops, reaching 600 residents. The logo was designed by a local artist. In the logic model, what is “40 workshops held”?

- A.** An input.
- B.** An output.
- C.** An outcome.
- D.** An activity.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10. [TRANSFER — reversed stem / different variable]

Which measure is an outcome in the logic model of a cooking program?

- A.** Participants eat 1.5 more servings of vegetables a day.
- B.** 600 residents attended.
- C.** Recipes printed and handed out.
- D.** Two dietitians hired.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

Midway through a school vaping-prevention program, staff check how many classes received all six lessons and whether teachers followed the script. The program's mascot is a cartoon owl. What type of evaluation is this?

- A.** Formative evaluation.
- B.** Impact evaluation.
- C.** Outcome evaluation.
- D.** Process evaluation.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12.

Adult smoking in a program county fell from 30% to 22% over two years. In a similar comparison county with no program, it fell from 31% to 27%. The program county also opened a new library. What is the best estimate of the program's effect?

- A.** No effect, because smoking fell in both counties.
- B.** An 8-point drop.
- C.** A 12-point drop.
- D.** A 4-point drop.

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	____	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer C Concept 1

For a county needs assessment, the team, ~~led by a newly hired planner,~~ pulls obesity rates from the state's BRFSS survey and census poverty data, then runs focus groups with parents at three schools. Which of these is primary data?

Target word: identify primary data **Decides:** Focus groups were collected by the team for this assessment.

A	Adjacent category	Analyzing existing data does not make it primary.
B	Confusion set	Collected by the state for other purposes; secondary.
C	Correct	Collected directly by the team for this purpose.
D	Absolute language	Gathering existing data is not collecting it.

2. Answer B Concept 2

A draft needs assessment for a neighborhood lists high diabetes, unemployment, crime, and food deserts. ~~The report is 60 pages long with color maps.~~ What key element is missing?

Target word: missing element **Decides:** Only deficits are listed.

A	Inverted operation	Ignores community strengths and ownership.
B	Correct	Assets are building blocks for solutions.
C	Dropped element	Adds another deficit.
D	Camouflage	Format is not the gap.

3. Answer A Concept 3

A coalition scores teen vaping using the Hanlon score $(A + 2B) \times C$: size $A = 6$, seriousness $B = 8$, and effectiveness $C = 5$. ~~The issue was raised by a high school principal at the first meeting.~~ What is the score?

Target word: Hanlon score **Decides:** $(6 + 16) \times 5$.

A	Correct	$(6 + 2 \times 8) \times 5 = 22 \times 5 = 110$.
B	Dropped element	Forgets to double seriousness: $(6 + 8) \times 5$.
C	Adjacent category	Adds all three raw scores $(6 + 8 + 5)$.
D	Inverted operation	Multiplies before adding: $6 + (2 \times 8 \times 5)$.

4. Answer B Concept 3 · transfer

A problem has size $A = 4$, seriousness $B = 7$, and a Hanlon score $(A + 2B) \times C$ of 144. What is its effectiveness score C ?

Target word: solve for C **Decides:** $144 / (4 + 14)$.

A	Wrong stem number	That is B.
B	Correct	$144 / 18 = 8$.
C	Dropped element	Forgets to double B: $144 / 11$.
D	Inverted operation	Multiplies 144 by 18.

5. Answer C Concept 4

Parents in a rural county, ~~where the only hospital recently merged with a larger system,~~ know that car seats save lives and want to use them, but many cannot afford one. Using PRECEDE, what kind of factor is cost?

Target word: PRECEDE factor **Decides:** A resource barrier.

A	Confusion set	Knowledge and attitudes are already favorable.
B	Camouflage	The merger is unrelated to car seat cost.
C	Correct	Resources and access are enabling factors.
D	Adjacent category	Reinforcing factors come after the behavior.

6. Answer A Concept 4 • transfer

After new mothers start breastfeeding, their partners and nurses praise them and offer encouragement. Which PRECEDE factor is this?

Target word: classify the factor **Decides:** Feedback after the behavior.

A	Correct	Rewards from others after acting.
B	Confusion set	A logic-model term.
C	Adjacent category	Enabling factors are skills and resources.
D	Inverted operation	Predisposing factors come before the behavior.

7. Answer D Concept 5

A grant team, ~~meeting in a borrowed conference room,~~ drafts objectives for a colorectal cancer screening program. Which one is SMART?

Target word: choose SMART **Decides:** Population, baseline, target, date.

A	Dropped element	No measure or deadline.
B	Adjacent category	An activity, not a change in the population.
C	Absolute language	Not achievable.
D	Correct	Specific, measurable, bounded in time.

8. Answer C Concept 5 • transfer

An objective aims to cut adult smoking by one-fourth from a baseline of 20%. What target prevalence should the objective state?

Target word: compute the target **Decides:** $20\% \times (1 - 0.25)$.

A	Adjacent category	Treats one-fourth as 0.25 percentage points.
B	Inverted operation	Raises prevalence instead of cutting it.
C	Correct	$20\% \times 0.75 = 15\%$.
D	Confusion set	That is the size of the cut, not the target.

9. Answer B Concept 6

A nutrition program used a \$75,000 grant and two dietitians to hold 40 cooking workshops, reaching 600 residents. ~~The logo was designed by a local artist.~~ In the logic model, what is “40 workshops held”?

Target word: logic model part **Decides:** A count of what was delivered.

A	Inverted operation	Inputs are resources like the grant and staff.
B	Correct	Outputs count delivery.
C	Adjacent category	Outcomes are changes in people.
D	Confusion set	Holding workshops is the activity; the count is the output.

10. Answer A Concept 6 • transfer

Which measure is an outcome in the logic model of a cooking program?

Target word: identify outcome **Decides:** A change in participants.

A	Correct	A change in behavior.
B	Inverted operation	An output.
C	Confusion set	An activity or output.
D	Adjacent category	An input.

11. Answer D Concept 7

Midway through a school vaping-prevention program, staff check how many classes received all six lessons and whether teachers followed the script. ~~The program's mascot is a cartoon owl.~~ What type of evaluation is this?

Target word: evaluation type **Decides:** Checking delivery and fidelity.

A	Inverted operation	Happens before launch.
B	Confusion set	Long-term population change.
C	Adjacent category	Would measure changes in students' vaping.
D	Correct	Reach and fidelity of delivery.

12. Answer D Concept 8

Adult smoking in a program county fell from 30% to 22% over two years. In a similar comparison county with no program, it fell from 31% to 27%. ~~The program county also opened a new library.~~ What is the best estimate of the program's effect?

Target word: program effect **Decides:** Program change minus comparison change.

A	Absolute language	The program county fell more.
B	Dropped element	Ignores the comparison county's trend.
C	Inverted operation	Adds the two changes.
D	Correct	$(-8) - (-4) = -4$ points.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owled.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	5	
Wrong stem number	A figure copied from the prompt that is not the answer.	1	
Adjacent category	The right idea in the wrong bucket.	9	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	9	
Absolute language	Always, never, guarantee — where judgment applies.	3	
Confusion set	Every option is real; the test is exact role-matching.	7	
Camouflage	Answers a stem fact that was never the question.	2	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Primary vs. secondary data	Primary data are collected by the team for this assessment (surveys, focus groups); secondary data already exist from others (census, vital records, BRFSS).	Calling data primary because the team analyzed it.	Who originally collected the data and for what purpose.
2	Asset-based assessment	A sound needs assessment maps community strengths, such as organizations, leaders, and spaces, alongside problems.	Cataloging only deficits.	A draft assessment that lists only problems.
3	Priority setting (Hanlon method)	The basic Hanlon score is $(A + 2B) \times C$, where A is size, B is seriousness (weighted double), and C is intervention effectiveness.	Forgetting to double seriousness or multiplying before adding.	Scores for size, seriousness, and effectiveness.
4	PRECEDE factors	Predisposing factors are knowledge, attitudes, and beliefs; enabling factors are skills, resources, and access; reinforcing factors are rewards and feedback from others after acting.	Calling a resource or access barrier predisposing.	Whether the factor is in the head, in the environment, or comes after the behavior.
5	SMART objectives	Objectives must be specific, measurable, achievable, relevant, and time-bound, with a population, baseline, target, and date.	Accepting a goal statement like “improve health” as an objective.	Several draft objectives, only one with a number, population, and deadline.
6	Logic model components	Inputs (resources) fund activities (what you do), which produce outputs (counts of what was delivered), leading to outcomes (changes in people) and long-term impact.	Calling the number of sessions held an outcome.	A measure that counts delivery vs. one that shows change in people.
7	Types of evaluation	Formative evaluation tests materials before launch; process evaluation checks delivery (reach, fidelity); outcome evaluation measures change in the target group; impact evaluation looks at long-term population effects.	Calling attendance and fidelity checks outcome evaluation.	What is being measured and when.
8	Comparison groups and causal claims	A comparison group separates program effects from outside trends; the effect is the change in the program group minus the change in the comparison group.	Crediting the program with the whole before-after change.	Before-and-after data for a program area and a comparison area.

Course scope (public description): Public Health Assessment, Program Planning, Implementation and Evaluation explores the key components, concepts, and approaches for the public health assessment and planning process. In this course, students will apply evidence-based practices to conduct a community needs assessment, design a health promotion program, and develop implementation and evaluation plans. There are no prerequisites for this course.
