Public Health Education and Promotion

Armored Drill

8 concepts · 12 items · 4 transfer items

What this is. Every concept in this course's public description, re-asked with more disguise than a practice test uses. Each stem carries facts that do not decide it. Every wrong answer is a named trap.

Source. Scope from the course's public description in the WGU Institutional Catalog (September 2026); items written from the field's standard body of knowledge. No WGU assessment item, course material or proprietary content is used or reproduced. Not affiliated with or endorsed by Western Governors University.

Method © 2026 Erik Daniel Lindquist — Course Mastery Coach, armored drill. Items drafted with AI assistance under his direction.

How to run it

Paper first. Pencil. One pass, no notes, a timer if you want the pressure.

1. **Before you read the options**, fill the strip under the item: the target word (what is actually being asked), and the one fact in the stem that decides it.
2. **Principle before arithmetic**. Name the rule, then compute.
3. **Camouflage**. Most of every stem does not matter. Ask: which single fact decides this?
4. **Inverse pairs are the bait**. If two options are opposites, one of them is the trap built for you.
5. **Mark sure, unsure or guess** honestly. Sure-and-wrong is the most valuable miss on the page — it is a wrong mental model.
6. **Absolutes** (always, never, guarantee) are usually wrong. And recognizing an answer is not the same as owning it.
7. Items with a **heavy black bar** on the left are **transfer items**: the same principle, reversed or solved for a different variable.
8. Stop at the STOP page. Then grade, fill the triage grid, and tally the traps you fell for. The biggest tally is what you drill next.

The strip, filled in, looks like this:

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	_____	

Items

1.

A county health educator with fifteen years of experience plans a spring campaign in a district where the median household income recently rose. The campaign offers free mammograms to women aged 50 to 74 who have no symptoms. Which level of prevention does the campaign represent?

- A. Primary prevention
- B. Tertiary prevention
- C. Primordial prevention, because the district's income is improving
- D. Secondary prevention

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

2. [TRANSFER — reversed stem / different variable]

Which activity is an example of tertiary prevention for type 2 diabetes?

- A. A foot-care and self-management class for adults already diagnosed, to prevent amputations
- B. A blood-sugar screening booth at a health fair
- C. Any diabetes program counts as tertiary once community rates are high
- D. A school nutrition curriculum to prevent obesity

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

3.

At a busy urban clinic that recently switched to a new scheduling system, a 34-year-old man says he knows the flu can be serious but that healthy people like him just don't catch it. His wife works at a local bakery. Which Health Belief Model construct should the educator target first?

- A. Cues to action, such as a reminder flyer sent to the bakery
- B. Perceived susceptibility
- C. Perceived barriers
- D. Perceived severity

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

4.

A worksite wellness coordinator at a 400-employee logistics company surveys smokers. One employee says she plans to quit sometime in the next six months but has not set a date or taken any steps. The company cafeteria recently added healthier menu options. Which stage is she in, and what strategy fits best?

- A. Action; focus on relapse-prevention coaching
- B. Contemplation; help her weigh pros and cons and build motivation
- C. Preparation; set a quit date and enroll her in a class
- D. Precontemplation; raise awareness only, because anyone who hasn't acted is not ready

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

5. [TRANSFER — reversed stem / different variable]

A client stopped using smokeless tobacco eight months ago and wants help staying tobacco-free at family gatherings. Which stage of change is he in?

- A. Termination, because he has fully quit
- B. Preparation
- C. Action
- D. Maintenance

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

6.

A youth program at a well-funded community center with a new gym wants middle-schoolers to refuse vaping offers. Staff show a video of students the same age calmly turning down an offer, then have participants practice the same lines in pairs. The program runs on Tuesday evenings. Which Social Cognitive Theory construct is the video mainly using?

- A. Environmental change, because the center has a new gym
- B. Perceived severity
- C. Observational learning (modeling)
- D. Consciousness raising for contemplators

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

7.

A diabetes educator at a hospital that just earned a national quality award must teach a newly diagnosed patient, who is a retired school principal, to draw up and inject insulin. Which teaching method best fits the learning domain?

- A. A lecture only, since a former principal learns well from lectures
- B. A group discussion about feelings about the diagnosis
- C. A printed handout explaining how insulin works
- D. Demonstration followed by return demonstration

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

8. [TRANSFER — reversed stem / different variable]

An educator uses role-play and a values discussion so teens can explore their attitudes about seat-belt use. Which learning domain is the target?

- A. Affective
- B. Cognitive
- C. Psychomotor
- D. All three domains equally, since every method teaches everything

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

9.

At the end of a discharge class in a clinic whose waiting room was just remodeled, a nurse educator explains a new blood-thinner schedule to a patient who holds a college degree. What is the best way to confirm the patient understood?

- A. Give a handout written at a college reading level to match the patient
- B. Skip the check, since a college degree means adequate health literacy
- C. Ask the patient to explain in their own words when and how to take the medicine
- D. Ask, "Do you understand?" and document a yes

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

10.

A city with a popular minor-league baseball team and two large universities wants to reduce sugary-drink intake. The health department proposes a requirement that all city-owned vending machines stock at least 50% water and unsweetened drinks. Which level of the social ecological model does this target?

- A.** Interpersonal
- B.** Public policy
- C.** Organizational, because the universities run their own vending
- D.** Intrapersonal

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

11.

Planners studying low bike-helmet use among children in a town with a scenic river trail find that many families cannot afford helmets and the nearest store selling them is 30 miles away. The town's mayor recently won reelection. In PRECEDE-PROCEED, these findings are which type of factor?

- A.** Predisposing factors
- B.** Both enabling and reinforcing, because any barrier counts as both
- C.** Enabling factors
- D.** Reinforcing factors

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

12. [TRANSFER — reversed stem / different variable]

Children say they would like to wear bike helmets, but classmates tease anyone who does. In PRECEDE-PROCEED, the teasing is which type of factor?

- A.** Reinforcing factor
- B.** Not a factor, since it is outside the child's control
- C.** Enabling factor
- D.** Predisposing factor

Target word	The one fact that decides	Answer	[] sure [] unsure [] guess
_____	_____	___	

STOP

Answers and dissection follow. Finish every item and every strip first.

Key and dissection

Struck-through text is the camouflage: facts that do not decide the item.

1. Answer D Concept 1

A county health educator ~~with fifteen years of experience~~ plans a spring campaign in a district ~~where the median household income recently rose~~. The campaign offers free mammograms to women aged 50 to 74 who have no symptoms. Which level of prevention does the campaign represent?

Target word: level of prevention **Decides:** Screening people without symptoms to find disease early.

A	Confusion set	Screening does not stop cancer from starting; it finds it early.
B	Adjacent category	Tertiary prevention limits disability in people already diagnosed.
C	Camouflage	The income trend is background; the campaign itself is screening.
D	Correct	Screening detects existing disease early, before symptoms, which is secondary prevention.

2. Answer A Concept 1 • transfer

Which activity is an example of tertiary prevention for type 2 diabetes?

Target word: tertiary example **Decides:** Tertiary targets people already diagnosed to prevent complications.

A	Correct	Reducing complications of existing disease is tertiary.
B	Confusion set	Screening to find undiagnosed cases is secondary.
C	Absolute language	Level depends on the target group's disease status, not community rates.
D	Inverted operation	Preventing onset is primary, the opposite end of the scale.

3. Answer B Concept 2

At a busy urban clinic ~~that recently switched to a new scheduling system~~, a 34-year-old man says he knows the flu can be serious but that healthy people like him just don't catch it. ~~His wife works at a local bakery~~. Which Health Belief Model construct should the educator target first?

Target word: which HBM construct **Decides:** He accepts severity but denies personal risk.

A	Camouflage	The wife's job is irrelevant, and a reminder does not fix a belief that he is not at risk.
B	Correct	He believes he is not at risk; that is the weak belief to address.
C	Adjacent category	Nothing in the stem suggests cost, time, or access problems.
D	Confusion set	He already agrees the flu can be serious.

4. Answer B Concept 3

A worksite wellness coordinator ~~at a 400-employee logistics company~~ surveys smokers. One employee says she plans to quit sometime in the next six months but has not set a date or taken any steps. ~~The company cafeteria recently added healthier menu options~~. Which stage is she in, and what strategy fits best?

Target word: stage and matched strategy **Decides:** Intent within six months, no steps or date yet.

A	Adjacent category	Action is for people who have already changed the behavior.
B	Correct	Intending to change within six months without concrete steps is contemplation.
C	Confusion set	Preparation means intent within 30 days with some steps already taken.
D	Absolute language	Having an intention within six months moves her past precontemplation.

5. Answer D Concept 3 • transfer

A client stopped using smokeless tobacco eight months ago and wants help staying tobacco-free at family gatherings. Which stage of change is he in?

Target word: stage **Decides:** Change sustained more than six months.

A	Dropped element	Termination requires no temptation at all; he still faces tempting situations.
B	Inverted operation	Preparation comes before the change, not after it.
C	Wrong stem number	Action covers the first six months; eight months is past that.
D	Correct	Behavior sustained longer than six months is maintenance.

6. Answer C Concept 4

A youth program at a ~~well-funded~~ community center ~~with a new gym~~ wants middle-schoolers to refuse vaping offers. Staff show a video of students the same age calmly turning down an offer, then have participants practice the same lines in pairs. ~~The program runs on Tuesday evenings.~~ Which Social Cognitive Theory construct is the video mainly using?

Target word: construct used by the video **Decides:** Same-age peers demonstrating the behavior.

A	Camouflage	The gym does not change vaping offers; the video is about modeling.
B	Adjacent category	That is a Health Belief Model construct, and the video shows a skill, not consequences.
C	Correct	Watching similar peers perform the skill is modeling.
D	Confusion set	That is a stage-of-change process, not the modeling the video provides.

7. Answer D Concept 5

A diabetes educator at a hospital ~~that just earned a national quality award~~ must teach a newly diagnosed patient, ~~who is a retired school principal~~, to draw up and inject insulin. Which teaching method best fits the learning domain?

Target word: best method for the domain **Decides:** Injecting insulin is a hands-on skill (psychomotor).

A	Camouflage	The patient's career does not change what a motor skill requires.
B	Confusion set	Discussion of feelings targets the affective domain.
C	Adjacent category	A handout serves the cognitive domain, not the skill.
D	Correct	Psychomotor skills are learned by watching and then performing with feedback.

8. Answer A Concept 5 • transfer

An educator uses role-play and a values discussion so teens can explore their attitudes about seat-belt use. Which learning domain is the target?

Target word: domain **Decides:** Aim is attitudes and values.

A	Correct	Attitudes, values, and feelings belong to the affective domain.
B	Adjacent category	Cognitive covers knowledge and facts, not values.
C	Confusion set	Role-play involves acting, but the aim is attitudes, not a motor skill.
D	Absolute language	Methods are chosen to target a primary domain.

9. Answer C Concept 6

At the end of a discharge class in a clinic ~~whose waiting room was just remodeled~~, a nurse educator explains a new blood-thinner schedule to a patient ~~who holds a college degree~~. What is the best way to confirm the patient understood?

Target word: how to confirm understanding **Decides:** Teach-back verifies understanding in the learner's own words.

A	Inverted operation	Plain language at a lower reading level is recommended for everyone.
B	Camouflage	Education level does not guarantee health literacy.
C	Correct	Teach-back is the standard check for understanding.
D	Dropped element	A yes/no answer drops the actual check of what the patient can recall.

10. Answer B Concept 7

A city ~~with a popular minor league baseball team and two large universities~~ wants to reduce sugary-drink intake. The health department proposes a requirement that all city-owned vending machines stock at least 50% water and unsweetened drinks. Which level of the social ecological model does this target?

Target word: ecological level **Decides:** A government requirement changes the rules for everyone.

A	Confusion set	That level works through family, friends, and peers.
B	Correct	A city requirement is a policy-level intervention.
C	Camouflage	The universities are background; the city rule is policy.
D	Adjacent category	That level changes an individual's knowledge or attitudes.

11. Answer C Concept 8

Planners studying low bike-helmet use among children in a town ~~with a scenic river trail~~ find that many families cannot afford helmets and the nearest store selling them is 30 miles away. ~~The town's mayor recently won reelection.~~ In PRECEDE-PROCEED, these findings are which type of factor?

Target word: factor type **Decides:** Cost and distance are resource and access barriers.

A	Confusion set	Predisposing factors are knowledge, attitudes, and beliefs.
B	Absolute language	The categories are distinct; cost and distance are only enabling.
C	Correct	Resources, cost, and access are enabling factors.
D	Adjacent category	Reinforcing factors are rewards or feedback from others.

12. Answer A Concept 8 • transfer

Children say they would like to wear bike helmets, but classmates tease anyone who does. In PRECEDE-PROCEED, the teasing is which type of factor?

Target word: factor type **Decides:** Peer reaction after the behavior.

A	Correct	Feedback from peers that rewards or punishes the behavior is reinforcing.
B	Dropped element	Drops the reinforcing category, which exists for exactly this.
C	Confusion set	Enabling factors are resources and skills, not other people's reactions.
D	Adjacent category	The children's own attitudes are positive; the teasing comes from others.

Triage grid

Write each item number in the box it belongs to.

	Right	Wrong
Sure	Owned.	Concept inversion — top priority. A wrong mental model; it survives rewording.
Unsure / guess	Recognition, not mastery. Re-drill with the transfer.	Not learned yet.

Trap tally

For every miss, find the letter you chose in the key and tally its trap. The biggest number is the pattern to drill.

Trap	What it does	In this drill	Your misses
Dropped element	Leaves out a required term or step.	3	
Wrong stem number	A figure copied from the prompt that is not the answer.	1	
Adjacent category	The right idea in the wrong bucket.	9	
Inverted operation	Direction flipped: add/subtract, cause/effect, higher/lower.	3	
Absolute language	Always, never, guarantee — where judgment applies.	4	
Confusion set	Every option is real; the test is exact role-matching.	10	
Camouflage	Answers a stem fact that was never the question.	6	

Anchor rows — the concept list

One row per concept: the rule to lock in, the trap that catches people, and the tell in the question that signals it.

#	Concept	Rule	Trap	Tell
1	Levels of prevention	Primary prevention stops disease before it starts, secondary finds it early in people without symptoms, and tertiary limits harm from disease already diagnosed.	Calling screening primary prevention because it happens before symptoms.	Whether the disease already exists, is being searched for, or is being managed.
2	Health Belief Model constructs	Behavior follows perceived susceptibility, severity, benefits, barriers, cues to action, and self-efficacy; target the belief that is actually weak.	Treating every hesitant person as needing scare messages about severity.	A person who accepts the risk is serious but thinks it won't happen to them.
3	Transtheoretical stages of change	Precontemplation (no intent in 6 months), contemplation (intent within 6 months), preparation (within 30 days, steps taken), action (under 6 months), maintenance (6+ months); match strategy to stage.	Giving action-stage skills to someone still weighing whether to change.	A time frame such as "next six months" or "quit eight months ago."
4	Social Cognitive Theory	Behavior, person, and environment interact; people learn by watching models and gain self-efficacy through practice and feedback.	Thinking information alone changes behavior without modeling or practice.	Peers demonstrating a skill that learners then rehearse.
5	Learning domains and methods	Match method to domain: cognitive (knowledge) to explanation and discussion, affective (attitudes) to values work and role-play, psychomotor (skills) to demonstration and return demonstration.	Teaching a hands-on skill with a lecture or handout alone.	A verb like inject, perform, or apply versus understand or value.
6	Health literacy and teach-back	Confirm understanding by having the learner explain or show it in their own words, and use plain language regardless of education level.	Asking "Do you understand?" or assuming a degree means high health literacy.	The final step of a teaching session or discharge instruction.
7	Social ecological model	Influences act at intrapersonal, interpersonal, organizational, community, and public policy levels; name the level the intervention changes.	Labeling any intervention by who benefits instead of what it changes.	A rule, law, or requirement versus a class or a family talk.
8	PRECEDE-PROCEED factors	Predisposing factors are knowledge, attitudes, and beliefs; enabling factors are skills, resources, and access; reinforcing factors are rewards or feedback from others.	Mixing up enabling barriers (cost, distance) with reinforcing ones (peer reaction).	Whether the barrier is inside the head, in the environment, or in other people's response.

Course scope (public description): Health Education & Promotion provides learners with a thorough understanding of this multifaceted field, delving into its core concepts, philosophical underpinnings, and fundamental principles. The curriculum explores various teaching methods tailored to the dynamic landscape of health education, equipping learners with versatile tools to effectively communicate health-related information. Learners develop an appreciation for the importance of promoting well-being and preventative measures, recognizing the interconnectedness of physical, mental, and social aspects of health. Through a combination of theoretical exploration and practical applications, this course aims to cultivate not only a strong foundation in health education, but also essential communication skills vital for disseminating health information in diverse contexts. Learners emerge from the course with a comprehensive skill set, ready to engage in the vital work of educating and empowering individuals and communities to make informed decisions for a healthier future. There are no prerequisites for this course.
